Chapter 1

Introduction

“Well, sonny, headin’ out to the big bad Wasteland is goin’ to be a harrowing experience for ya unless ya go prepared. Ah’ve spent a good chunk of mah life gatherin’ notes and stuff to prepare a wet-behind-the-ears foal for this moment... Hope it helps ya.”

The world of post-apocalypse Equestria is filled with a variety of creatures with most out to get your head. This book seeks to give examples of creatures that populate the many different places in the Wasteland, from the darkest ruins to open plains and beyond.

These creatures, both sentient and not, serve as the many antagonists and obstacles to the players’ characters, and to give them conflict to solve, either by speaking the forces opposing them down or by giving them a solid whacking. More often than not, it’s the solid whacking.

Though this book offers statistics to the monsters both mutated and not, they should be seen more as guidelines than hard facts, and can be tinkered with to suit the purpose of the story and the party level.

Chapter 2

Rules

Reading the Document

This document has been created in a way for you, the aspiring GM to find all the necessary information about the walking and maybe talking threats of the wild, untamed Wasteland.

Types of Mutants

Mutants have many different types, which can mean they resist or are outright immune to some of the game's concepts. This chapter also focuses on explaining what the common guidelines are for the various creatures that belong into a particular grouping.

Creatures, both sentient and "feral" have an assortment of skills they generally utilize. Most are due to training and innate abilities and features. These are for quick access and reference. In a situation, where player characters use skills against unspecified values, such as Barter to strike a deal with an Equitron, creatures use either an untrained value of 15 or 20, or freely given values to create individuality to said creatures.

Note: Certain creatures, such as most insects and robots have additional body parts (antennae and combat inhibitors exclusively) that are considered limbs and which can be crippled. Hitting these

parts will cause the creature to be unable to discern enemies and friends and attack the closest creature next to it.

Abomination: What commonly differentiates Abominations from other Mutants is often the lack of proper adaptation and evolution to the Wasteland. Resemblance of Abominations usually stands out like something forcibly changed them to their state, without any consideration whether change was beneficial. Abominations have, however, developed or gained many magical and necrotic abilities beyond most magicians. They can often also be traced back to species that was or is sentient.

Animal: Animals are perhaps the most diverse creatures of the bunch, and unlike other creatures, do not have any special rules for them.

Insect: Insects have their own caste from animals as they have chitinous exoskeleton and often a pair of antennae as well as three pair of legs. This means insects usually have more legs to cripple, functioning relatively well even if two of their legs are out, but their antennae are also a part for crippling effect; this effect causes the insect to gain Mind-Controlled and Enraged status effects.

Machine: Machines are creations of science, hulking metallic creations varying from simply automated turrets to robots of very equine characteristics. Common to all robots is their fearlessness, making Intimidation pointless against them, inability to bleed like living creatures, and their inability to feel pain, keeping them functioning even with critical damage. Machines do bear weakness to EMP based weapons and can be shutdown.

Mutant: Mutant means that the creature was mutated from some Pre-War era creature either by balefire or Taint. These are the most common creatures in the manual. Mutants have a higher tolerance to radiation but are often not immune to it.

Non-Mutant: Non-Mutated creatures are the ones that due to immunity to radiation and taint have remained the same even after the apocalypse. Their most notable trait is that radiation has no effect on them at all, rendering weapons that deal radiation damage moot against them.

Plant: Plants are diverse, with various species being born of Radiation or Taint mutations, to completely remaining unscathed by them surviving from the times before war. Common trait to plants is their complete inability to move or simply move remarkably slow. However, plants cannot be Crippled.

Sentient: Best way to describe Sentient beings is their ability to communicate with the common language, and think rationally; assuming they wish to do so. Sentient beings are most commonly other equines and griffons, thus their abilities and resiliencies are quite equal, each having fairly low Radiation tolerance and nearly zero chance to survive contamination by Taint. However, their nature can vary from highly sophisticated societies that can be interacted with ease to purely savage tribal groups that will see outsiders little more than prey.

2.1 Gathering Information

You will find that most of the info in the pages of this Mutant Manual is the sort of information that might aid your players in the fight against said creature. While some information, like the creatures HP and Skill values are better kept hidden, information like particular resistances or special combat features are info that PCs might know.

Characters can attempt to remember what they know about a specific creature with a **Survival-skill check**; the better the roll, the more useful the information is. For example, if the characters encounter a Manticore, a successful roll reveals the kind of poison the Manticore has. A Critical success reveals their Resistances and complete immunity to Radiation and Taint. A failed roll might know that the creatures are not usually aggressive by default and Critical Failure might know that they build their nests up high. Not very useful information, but knowledge still. A 100 roll might even be factually incorrect.

Characters that have **This Enemy of Mine -perk**, will always know when they're facing their preferred creature.

Looting Mutants

In the *Mutant Manual*, each creature has a small collection of items listed for the players to loot for themselves. Aside from two exceptions looting doesn't require a check to perform. These exceptions are doubling the amount of particular item the character can get, and items that have a chance of being on the lootable character.

Doubling the number of lootable items is usually done by rolling either **Survival**, **Mechanics** or **Science**. Items of this type have the required skill listed next to them.

Some items require a successful LCK roll for the item to be in the enemy's inventory. Such items are books, magic notes and magazines, which can be carried around by sentient creatures.

In case of there being a large amount of downed enemies, the looting can be collective of all the creatures, to reduce the time the party spends pulling off armors and prying weapons from dead hooves.

Due to these lists not being exhaustive and mentioning every part of a creature down to their pinky toes, PCs sometimes want to get parts that are not listed on the list. It is suggested that the GM looks at the possible skill requirements of a similar part and proceeds accordingly. These parts may require a Survival, Mechanics or Science roll for successful removal.

After a PC has managed to find what they can from the downed enemy, the enemy is considered empty, even if another PC decided to go through them in more detail later.

Chapter 3

Critters & Mutants

Alicorns

“Rarely do you come across a creature more dangerous than an alicorn. Armed with Unicorn’s powerful magic, Pegasi’ flight and the tremendous strength of the Earth Pony, this smart abomination will kill you in a blink of an eye. And all other Alicorns will know it in a heartbeat.”

- Star Paladin Glitter Dust

Blue Alicorn

“The Blue alicorn is a sneaky foe, and they can really take you by surprise with their Invisibility-spell. However, it isn’t as physically strong as its sisters.”

- Star Paladin Glitter Dust

Type: Abomination/Sentient

EXP: 250

Type: Abomination/Sentient

EXP: 250

STR 6, **PER** 5, **END** 6, **CHA** 6, **INT** 7, **AGI** 9, **LCK** 5

Melee 75, **Unarmed** 50, **Sleight** 50, **Sneak** 60, **Thaumaturgy** 70

HP 16, **DT** 4, **AP** 14, **Size** 1, **Karma** -25 (default; can vary)

Potency 18, **Strain** 30

Immunities Radiation

Resistances Poison 50%

Weaknesses none

Additional Combat Details:

Super charged: When exposed to high amounts of radiation, the Alicorns grow in size from 1 to 2. In addition, they can create a Splash attack of irradiated glowing air to all adjacent to them. This attack deals 3+(3) damage and gives 2 Rads at 1x70%, and costs 7 AP.

Wasteland Weaponry: Blue Alicorns equip themselves with weapons and armor, tending to favor light armor, and fight with various Melee and Unarmed.

Flying: Alicorns have working wings, thus they are capable of flight. Blue Alicorn's flight speed is 1 AP for 4 meters (2 Hexes). Alicorns have working wings, thus they are capable of flight. Blue Alicorn's flight speed is 1 AP for 4 meters (2 Hexes).

Alicorn Magic: Blue Alicorns have access to a powerful Invisibility-spell. Blue Alicorn's Invisibility gains +5 to Duration.

Magical Talent: The blue variant of the Alicorn has access to all the spells in the Conjunction and Illusion Magic Schools. Spells in these schools have -1 to their AP costs (to a minimum of 1).

Creature drops:

- Abomination flesh piece (1d4, Survival doubles u.)
- Main Weapon (1)
- Additional Weapon (2)
- Armor (1)
- Spell Instructions, Conjunction/Illusion school (1, LCK-2 to obtain)

Green Alicorn

"The Green alicorn is a capable enemy, but it lacks the Blue alicorn's sneakiness and Purple's magical grandness and makes due with being slightly bulkier than the other types. Despite this, it is also the most likely to communicate."

- Star Paladin Glitter Dust

Type: Abomination/Sentient

EXP: 200

STR 8, PER 7, END 6, CHA 4, INT 5, AGI 7, LCK 5

Diplomacy 65, Explosives 60, Firearms 65, Mechanics 40, Sneak 40, Thaumaturgy 70

HP 20, DT 4, AP 13, Size 1, Karma -25 (default, can vary)

Potency 16, Strain 30

Immunities Radiation

Resistances Poison 50%

Weaknesses none

Additional Combat Details:

Super charged: When exposed to high amounts of radiation, the Alicorns grow in size from 1 to 2. In addition, they can create a Splash attack of irradiated glowing air to all adjacent to them. This attack deals 3+(3) damage and gives 2 Rads at 1x70%, and costs 7 AP.

Wasteland Weaponry: Green Alicorns equip themselves with weapons and armor, tending to favor heavy armor, and fight with various Firearms and Explosives with great efficiency.

Flying: Alicorns have working wings, thus they are capable of flight. Green Alicorn's flight speed is 1 AP for 6 meter (3 Hexes).

Alicorn Magic: Green Alicorns have a powerful Shield Spell. Green Alicorn's Shield has 3 DT, and can stop explosives such as grenades and thrown weapons.

Magical Talent: This variant of the Alicorn has access to the Perception and Enchantment Magic schools. Spells in these schools have -1 to their AP costs (to a minimum of 1).

Creature drops:

- Abomination Flesh piece (1d4, Survival doubles u.)
- Main Weapon (1)
- Additional Weapon (1, Survival doubles u.)
- Armor (1)
- Spell Instruction, Perception/Enchantment School (1 u., LCK-2 to obtain)

Purple Alicorn

"The Purple alicorn is the strongest variant, and a capable spellcaster. Take great care when coming to contact with this one, as it boasts the highest intelligence out of all of the variants."

- Star Paladin Glitter Dust

Type: Abomination/Sentient

EXP: 300

STR 6, PER 5, END 6, CHA 5, INT 10, AGI 7, LCK 5

Intimidation 60, MEWs 80, Science 60, Sneak 40, Thaumaturgy 80

HP 16, DT 6, AP 13, Size 1, Karma -25 (default, can vary)

Potency 20, Strain 30

Immunities Radiation

Resistances Poison 50%

Weaknesses none

Additional Combat Details:

Super charged: When exposed to high amounts of radiation, the Alicorns grow in size from 1 to 2. In addition, they can create a Splash attack of irradiated glowing air to all adjacent to them. This attack deals $3+(3)$ damage and gives 2 Rads at 1x70%, and costs 7 AP.

Wasteland Weaponry: Purple Alicorns equip themselves with weapons and armor, tending to favor light armor, painting the lands with MEWs.

Flying: Alicorns have working wings, thus they are capable of flight. Purple Alicorn's flight speed is 1 AP for 4 meters (2 Hexes).

Alicorn Magic: Purple Alicorns have a powerful Teleportation Spell. Purple Alicorn's Teleport spell is -1 PER when teleporting to spots she cannot see.

Magical Talent: This variant of the Alicorn has access to the Transmutation and Conjuration Magic Schools. Spells in these schools have -1 to their AP costs (to a minimum of 1).

Creature drops:

- Abomination Flesh piece (1d4, Survival doubles u.)
- Main Weapon (1)
- Additional Weapon (1, Survival doubles u.)

- Armor (1)
- Spell Instruction, Transformation/Conjuration School (1 u., LCK-2 to obtain)

Description:

Alicorns are amongst the most feared creatures that the Equestrian Wasteland has to offer. Cunning, strong and possessing all of the other pony races' abilities, these artificial Taint-created alicorns have a hivemind they use to communicate and share experiences. This means that no trick works on them twice, making them especially lethal.

All alicorns are solely female, and are in search of a way to attempt converting male unicorns into male Alicorns, though before the Day of Sunshine and Rainbows, this goal has not been achieved. Alicorns are often solidary encounters all across the Wasteland, but sometimes they do group together when the Goddess commands it. The Goddess is the Alicorn all other alicorns heed to and communicate with telepathically. Alicorns are highly intelligent creatures, and as such they can be bargained with, but considering how lowly they often wield the common pony, such negotiations often require one's worth proven.

It is not known to many what alicorns do on their spare time -or if they have the concept of it, even- and as such it is hard to determine how they group and live. Most often than not, one encounters an Alicorn on the prowl for unicorns to convert into artificial alicorns via the use of Taint.

Alicorns possess heightened, special versions of certain unicorn spells that depend on the alicorn's coat color. With blue Alicorns, this is the Invisibility-spell, green alicorns have a more powerful variant of the Shield-spell, and the purple alicorns have superb Teleport-spell.

Balefire Phoenix

"There is nary anything as beautiful and terrifying as a Balefire Phoenix flying through the sky with its iridescent green glow trailing behind it. Beautiful for its gracefulness, terrifying for the moment it decides to swoop down and eat your face."

- Verdant Brink, Hunter

Type: Mutated Animal

EXP: 100

STR 3, PER 7, END 3, CHA 5, INT 5, AGI 10, LCK 6

Melee 50, Unarmed 60, Sneak 40, Survival 55

HP 13, DT 1, AP 15, Size -1, Karma 0 (default)

Immunities Fire, Radiation

Resistances Poison 25%

Weaknesses none

Additional Combat Details:

Firebreath (4 AP): Balefire Phoenix can breathe fire from their beaks, at the range of one adjacent tile in front of them. This attack deals 1+(3) fire damage, and inflicts Burning-status effect if any damage goes through the target's DT. If they have 17-20 Rad Tokens, their Firebreath reaches up to two hexes in front of them and deals 2+(3) Fire damage instead.

Irradiated Firestorm (1/min, 8 AP): The balefire phoenix engulfs themselves in green flames and swoops down to their enemy, dousing a Small Splash Template in flames. This attack deals 2+(3) fire damage and if any damage goes through, inflicts a burning-status effect. In addition to this, it gives 1 Rad 3x40% to all who come in contact with the flames.

Sunburst (6 AP): The balefire phoenix releases a shining flash of light targets all within Large Burst area, causing Medium Distraction to all who fail a PER check.

Rad Healing (1/min, 8 AP): Balefire Phoenix may choose to discard 2-5 Rad Tokens, and replenish an equal amount of lost HP and/or Crippled Conditions, if any are present.

Biological Immortality: Balefire Phoenix occasionally renew themselves by bursting into flame and raising from the ashes. However, unlike with regular phoenixes, the Balefire Phoenix's ashes are radioactive, giving 1 Rad with 2x50% to any who are adjacent to a pile of it. Disintegration from MEW's does not kill a Balefire Phoenix, but instead starts the renewal process. Balefire phoenix is however still vulnerable to diseases and predators like any other animal.

Flying: Balefire Phoenix have working wings, thus they are capable of flight. Phoenix's flight speed is 1 AP for 6 meter (3 Hexes).

Creature drops:

- Tail Feathers (Irradiated Material, 1-3 u.)
- Ashes (Irradiated Material, 1 u.)
- Beak (1 u.)
- Wing (2 u.)

Description:

Balefire phoenix is a phoenix bird mutated by -as the name would imply- the necromantic Balefire that destroyed the world. Now sporting a bright green and gold plumage, this lithe bird soars through the skies like a radioactive beacon.

Most balefire phoenix have not altered their way of living from their unmutated brethren; the female lays 2-4 eggs, which are raised by both the male and female. In this regard, balefire phoenix resemble most birds that mate for life. They tend to host their nest up high, either on trees or on the many derelict buildings. Due to mating for life, most balefire phoenix are seen in pairs, though on occasion one can find a lonesome one.

Most balefire phoenix eat small vermin such as unmutated rats, though they have been seen to carry off even a molerat pup on an occasion, showing that they do not turn up their beaks at bigger food sources.

Generally, balefire phoenix are not aggressive on sight, but if they have a nest of eggs or chicks, they will fend them ferociously. There have been some records of balefire phoenix being tameable, but this is a feat all of its own; balefire phoenix do not friend equines willy-nilly, and gaining one's trust is a merit of its own.

Due to their nature as a phoenix, the bird is largely immortal in a sense. Though they can succumb to heavy injuries and toxins, they are technically unaffected by time. When a balefire phoenix nears the end of its cycle, it begins to shed its wonderful plumage and finally it bursts into flames to be born anew, with its body back to a youthful adult. Reaching this phase can take several decades.

Bloodwing

"Bloodwings are mutated bats, some debate between regular Fruit bats and Vampire Fruit bats, but I can swear that no pony gives a buck once a bat the size of a mare swoops down to suck them dry. Even worse is that they like to go hunting in huge swarms."

- Verdant Brink, Hunter

Type: Mutated Animal

EXP: 150

STR 5, PER 8, END 5, CHA 2, INT 4, AGI 7, LCK 3

Sneak 40, Survival 50, Unarmed 60

HP 14, DT 2, AP 13, Size 0, Karma 0 (default)

Immunities None

Resistances Poison 40%, Radiation 30%

Weaknesses None

Additional Combat Details:

Blood Drain (5 AP): Bloodwing attacks by biting the target and starts to suck the victim dry. This attack deals 2+(2) damage; half of the dealt damage after DT returns to the Bloodwing as HP (min. 1 HP).

Slasher (7 AP): Bloodwings have long claws on their feet. They can use these claws to pick up ponies or slash at them with the claws. This attack deals 2+(2) damage and can cause a Bleeding -Status Effect.

Flying: Bloodwings have working wings, thus they are capable of flight. Bloodwings' flight speed is 1 AP for 4 meters (2 Hexes).

Blind echolocator: Bloodwing has barely any eyesight, but it can locate its targets with sound as if it saw the target, and thus is unaffected by vision affecting conditions. Penalties that center around sound and hearing have their effect doubled when lowering PER. Distractions made with sound are one level higher; Minor to Moderate, Moderate to Major.

Nocturnal: Bloodwing is mostly active between hours of 18:00 to 6:00.

Creature drops:

- Wings (1-2 u.)

- Teeth (2d6 u.)
- Berries (1d6+1 u.)
- Green, Red or Blue Herbs (1d4 u. Survival doubles u.)
- Black or White Herbs (1d2+1 u. Requires LCK-1 to get)

Description:

Bloodwings are bats mutated by Balefire Radiation, and as such they share many elements with the non-mutated bats that used to grace the Equestrian nights. It is currently unknown if the Bloodwing evolved from the Fruit bat or the Vampire Fruit Bat, it is certain that this species is favoring blood as their main source of nutrients, though it has been known to lay waste to orchards as well.

The bloodwing's saliva has magical component to it that keeps a wound it has made unable to close normally, making this creature lethal even if one were able to get away from it after being bitten. And the wound is rarely a dainty little bite mark on the victim's body, but an ragged, ripped gnash.

Bloodwings live in large colonies, inhabiting any sufficiently dark and moderately undisturbed place that they can get to. Much like other bat species, the bloodwings sleep upside down. Bloodwings often travel in smaller groups of 4-6 individuals, but sometimes an entire colony can be on the move at the same time, likely due to looking for a new nest. Bloodwings do not have an established hierarchy.

Bloodwings cannot survive long without a meal, and due to this and their social structure, bloodwings can and often do share meals, by full-bellied bats regurgitating blood for the starving individuals. It is not known if the bloodwings are more likely to do this to their family members, or all members of the colony equally.

Bloodwings are largely blind, and locate prey with their echolocation instead, often swooping down and pinning down their prey for easier feeding. Bloodwings also hunt during night-hours, so the likelihood of running into one during the day is slim at best. It is still best advised to try not to remain in old ruins during the night, due to bloodwings being active.

Bloatsprite

"I didn't think the parasprite could get more interesting, but they did! They still eat everything in sight at high-speed, but now they've even gotten aggressive about it, exploding after grave injuries...! Fascinating! They even tried to pierce the bullet glass window of my lab with some thick barbs... Got about half a centimeter in."

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 50

STR 3, PER 5, END 5, CHA 3, INT 3, AGI 5, LCK 6

Melee 60, Unarmed 50, Sneak 50

HP 6, DT 0, AP 13, Size -2, Karma 0

Immunities None

Resistances Poison 70%, Radiation 30%

Weaknesses see Combat Details

Additional Combat Details:

Bite (3 AP): A set of powerful pincers that easily pierce flesh. Deals 1+(1) damage.

Bloated: Upon death, bloatsprites explode releasing poisonous entrails on a Small Splash template, with a 2x40 % chance to poison those in the afflicted area. Those who are poisoned suffer from Dazed status effect for 3 rounds or until removed.

Poison Barb (4 AP): Bloatsprites fire the barbs from their spine at their foes (Melee, range 10/20/30), dealing 1+(2) damage. If this attack's damage overcomes DT, it has a 1 x 40% chance to cause a poisonous hallucination. If the target is poisoned, they will suffer from Dazed status effect for 3 rounds or until removed.

Flying: Bloatsprites have working wings, thus they are capable of flight. Bloatsprites' flight speed is 1 AP for 2 meters (1 Hexes).

Insectoid Weakness: Bloatsprites lack a pair of the usual 3 pairs of legs, with one set being their wings instead. These wings can be crippled to half their movement speed to 2 AP for 2 meters (1 Hexes).

Creature drops:

- Venom Sac (1)
- Bloatsprite Meat (1, Survival doubles u.)

Fillyadelphia Bloatsprite

"I traveled to Fillyadelphia. What a wreck! But I did see an interesting parasprite mutation. I theorize the radioactivity in the area is the cause of it, judging how ill I got from the few that tried to kill me. Clearly, they can cause radioactive poisoning. Simply fascinating, how well these creatures adapt to their surroundings!"

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 50

STR 4, PER 6, END 5, CHA 3, INT 4, AGI 7, LCK 6

Melee 70, Unarmed 50, Sneak 60

HP 8, DT 1, AP 14, Size -2, Karma 0

Immunities *None*

Resistances Poison 30%, Radiation 70%

Weaknesses see Combat Details

Additional Combat Details:

Bite (3 AP): A set of powerful pincers that easily pierce flesh. Deals 1+(2) damage.

Bloated: Upon death, bloatsprites explode releasing radioactive entrails on a Small Splash template, with a 2x60 % chance to give 1 Rad.

Radioactive Barb (4 AP): Bloatsprites fire the barbs from their spine at their foes (Melee, range 10/20/30), dealing 1+(3) damage. The barb carries a radioactive agent, with a 1 x 60 chance to give 1 Rad.

Flying: Bloatsprites have working wings, thus they are capable of flight. Bloatsprites' flight speed is 1 AP for 2 meters (1 Hex).

Insectoid Weakness: Bloatsprites lack a pair of the usual 3 pairs of legs, with one set being their wings instead. These wings can be crippled to half their movement speed to 2 AP for 2 meters (1 Hexes).

Creature drops:

- Radiation Gland (Irradiated Material, 1 u.)
- Bloatsprite Meat (1, Survival doubles u.)

Necrosprite

"I did intend to make my way to the Canterbury ruins, but I had to turn back due to some parasprite...ghosts? I could barely fend them off, and I feel dumber since the encountur. Wait, that's not right, enconter. Uh...Meeting. Yes."

- Acacia Honey, Entomologist

Type: Abomination/Insect

EXP: 100

STR 1, PER 4, END 5, CHA 1, INT 3, AGI 5, LCK 4

Unarmed 70, Sneak 70

HP 3, DT 0, AP 12, Size -2, Karma 0

Immunities Poison

Resistances Radiation 60%

Weaknesses see Combat Details

Additional Combat Details:

Mindlayer (10 AP): Necrosprites feed upon their prey's mental capabilities, dealing 1 INT damage if they engulf a Hex the character is standing on.

Phaser (5 AP): Necrosprites can pass through conventional armor and flesh, causing 1+(2) damage. This attack ignores the DT of all non-magical (not enchanted or Power Armor) armors. Shield-spell cannot be penetrated by Necrosprites.

Unliving: Necrosprites pass through solid, non-magical objects like incorporeal ghosts. Due to this, conventional, non-magical weapons do not harm them. Magical weaponry like MEWs and Spirits do. They also cannot be killed, but if their HP are brought to a 0 they are dispersed for a day after which they reform themselves.

Painless: Necrosprites feel no pain, and as such, do not suffer from Pain Thresholds.

Hovering: Necrosprites hover in the air, with a movement speed of 2 AP for 2 meters (1 Hex).

Swarm: Necrosprites appear in large groups, engulfing a Small Splash template. Due to their large numbers, Necrosprites gain a +5 to Unarmed when making Attack of Opportunity attacks.

Insectoid Weakness: Bloatsprites lack a pair of the usual 3 pairs of legs, with one set being their wings instead. These wings can be crippled to half their movement speed to 3 AP for 2 meters (1 Hexes).

Creature drops:

None

Description:

Bloatsprites are one of the most common mutated insects, perhaps only bested by the radroach in their adaptability, found inhabiting a myriad of habitats. Mutated from the once relatively common pest parasprite, this round insect darts around the air with erratic patterns. The bloatsprite has essentially replaced parasprites of the War-time Equestria, with the non-mutated parasprite become nearly extinct due to magical radiation.

While parasprites could be described as cute, bloatsprites are the very opposite; the balefire radiation has made their body bloated -hence the name- with gaseous build-up, like a toxic balloon. The presumably painful transformation has also altered their aggression, as they are far more aggressive towards other creatures than parasprites.

Bloatsprites shoot the venomous spikes from their body at their targets with surprisingly decent accuracy, though they lack in range. Much like the non-mutated parasprite, bloatflies eat anything they can get to in seconds, and have ferocious appetite toppled with their extreme omnivore tendencies. The list of things not part of bloatsprite's dietary habits is quite short indeed, and equine flesh is not included in that list.

Bloatsprites mate asexually, a trait they're retained from their non-mutated brethren. Once a bloatsprite has consumed enough nutrients, it regurgitates a duplicate of themselves, though color variations may occur. It is currently unknown and untested how much nutrients are required for duplication, but certain scientist did record a bloatsprite devouring a two-seat skywagon and several street signs before regurgitating a replica.

Both regular bloatsprites and the Fillydelphia bloatsprite make nests preferably in tight, confined spaces such as abandoned Stables and houses, and their territories can be quite large, several kilometers in length, centered on the nest. In addition to this, some members of the bloatsprite colony break off and wander the Wastes in search of a nest of their own, causing the species to be very mobile and thus often encountered threat.

Two other variants of the bloatfly exist; **Fillydelphia bloatsprite** and **Necrosprite**, with the former mutated from the intense balefire radiation into a more lethal variant, and the latter essentially dying and coming back as a twisted remnant of a parasprite, mutated by the Pink Cloud -megaspell. Of the three, necrosprites are the most deadly, as they are practically unkillable, though they can be dispersed with enough force.

Necrosprites, due to the necromantic magical energy are essentially deceased, and their ghost-like appearance reflects this. Due to this ethereal trait, necrosprites care little about conventional bullets fired at them. Magic is the key element to dispersing the necrosprites, though they cannot be ultimately killed. Due to this same necromantic energy, necrosprites do not breed, nor do they truly feed. However, they have been shown to attack passersby with little to no provocation.

Necrosprites' bodies inherent magic siphons away at the targets' mental capabilities if they manage to swarm a person, which can be devastating on longer exposure. This makes them rather dangerous creatures, even if their territories are usually mere few kilometers wide and which they rarely expand.

Brahmin

"Technically, Brahmin is the nicest of the abominations that roam this desolate wasteland. For one, they usually are content letting you be and carry on your day. Some of them, kind of like Ghouls, are sentient, though usually only one of the Brahmin's two heads can be sentient. They are very useful for pulling wagons and whatnot. Though, if they are angered, they will trample you down, or kick you in the chin. So... just be nice to them, that clear?"

- Star Paladin Glitter Dust

Type: Abomination

EXP: 100

STR 7, PER 6, END 6, CHA 5, INT 5[†], AGI 5, LCK 3

Barter 60[†], Diplomacy 60[†], Unarmed 60, Sneak 30

HP 16, DT 2[†], AP 12, Size 1, Karma 0

Immunities None

Resistances Poison 15%, Radiation 30%

Weaknesses none

Additional Combat Details:

Buck (5 AP): Brahmin can buck at their foes, causing 2+(3) damage.

Trample (8 AP): Brahmin can charge at their foes, trampling them under their weight. Trample causes 3+(2) damage, as well as additional +(1) damage for each size category smaller than brahmin.

Twin-headed: As Brahmins have two heads, crippling one head has only half the effect.

†Sentience: As a rare occurrence, brahmins may retain their sentient minds. A sentient brahmin has additional +2 INT, as well as access to Diplomacy and Barter. However, they lose the innate 2 DT from toughened hide of their feral cousins.

†Wasteland Weaponry: Brahmins with sentience can equip themselves with weaponry and armor, tending to favor heavy armor, but go for any gun they find easy to use.

Creature drops:

- Brahmin Meat (Abomination Flesh Piece, 3 + Survival doubles u.)
- Junk (1d6)
- Random Gear from Tools, Books & Magazines (1-2, LCK doubles u.)

Description:

Brahmin are what remains of the many sentient cows that inhabited the war-time Equestria, now mutated into two-headed beings that, much like ghouls, have both sentient and “feral” members in their species.

Though unlike feral ghouls who attack anything they perceive as a threat, the feral brahmin are quite calm and docile, often running away from attacking creatures rather than confronting them. This calm behavior, as well as brahmins’ strong backs have made them ideal for pulling wagons and carrying heavy items such as merchandise or goods. Thus merchants are often seen with a brahmin or two, sentient or no.

If the brahmin in question is sentient, only one of the heads will be capable of thought and reasoning, while the other head is that of a regular animal. The two heads act separately, hence why there is no shared intelligence between the heads.

It is theorized that the mutation that took root, the two-headed trait, might have developed as a defense mechanism to give the brahmin more time to get away from predators. This is why brahmin rarely suffer much from one crippled head. If forced to, brahmin will fend for themselves by ramming and trampling their opponents with their large, hefty body. Brahmin are largely hairless, aside from some tufts of fur that still clings to their body. They have a somewhat thicker skin than fur-coated ponies, perhaps so they can endure the elements better.

Brahmin are capable of equipping armor and often are dressed in heavy armor for added protection in caravans. Sentient brahmin can also use guns to fend for themselves, though they use a modified firing bit, due to the size of their mouth and teeth breaking guns’ bits fashioned for Earth Ponies.

Brahmin, much like cows that preceded them, are strict herbivores and unlike ponies who can wrangle nutrients from meat, brahmin cannot. Much like cows, brahmin produce milk, though it is slightly radioactive due to the brahmin’s mutations.

Perhaps due to the possibility of sentience, some pony communities that consume meat do not use brahmin as cattle. Of course, there are communities that don’t give a molerat’s behind for such feeble things such as “morality of possibly kinda-sorta cannibalism”, as described by a interviewed wastelander from a village in east Equestria.

Bugbear

"Bugbears were, for the longest of times, a source of arguments in the entomologist world, until it was decided that it was actually an insect with mammalian traits, not the other way around. They are most commonly found looking like a hybrid of bees and pandas, but other variants also exist. The white-furred northern variant is quite sought out by collectors."

- Acacia Honey, Entomologist

Type: Non-Mutated Insect

EXP: 800

STR 8, PER 6, END 6, CHA 4, INT 6, AGI 7, LCK 5

Sneak 40, Unarmed 75

HP 20, DT 4, AP 14, Size 3, Karma -20

Immunities Radiation

Resistances Poison 60%

Weaknesses none

Additional Combat Details:

Bite (6 AP): Bugbears' jaws resemble those of a ursine creature, with the bite force to match. Their bite deals $5+(3)$ damage, and has a 25% chance of crippling a they're chomping down on.

Rend (4 AP): Often compared to Hellhounds in their ferocity and physical force, the Bugbear's Rend can cause considerable damage. The attack deals $4+(2)$ damage and ignore 2 DT from their target.

Poisonous Stinger (7 AP): Bugbear's back end forms a stinger that they use to stab creatures with. Due to the creature's size, the stinger behaves much like a spear, easily puncturing armor. This attack deals $4+(4)$ damage and ignores 2 DT. In addition, the stinger is used to deliver a poison to the target's system, with 2x50% chance of poisoning the target. If successfully poisoned, the target suffers from Bleeding -status effect.

Flying: Bugbear flies with bee-like insect wings and for its size, it is surprisingly agile creature. It's movement speed is 2 meters/1 hex for 1 AP.

Multiple Arms: Bugbears have 4 arms, and thus gain +10 to any Grapple checks, as well as can have 2 Attacks of Opportunities per round.

Insect Brain: Crippling the Bugbear's antennae causes it to gain Mind Controlled and Enraged -status effects and make them attack the nearest creature, be it friend or foe.

Creature drops:

- Fur Pelt (2 u.)
- General Meat (1d4, Survival doubles u.)
- Poison gland (1 u.)

Description:

This large insectoid creature is a blend of bears and bees, creating what is probably the worst kind of mixture in the history of hybrids. Intelligent and armed with loads of brute force, the Bugbear is not your typical house-fly; you're going to need a bigger fly-swatter.

The formidable bugbear has 4 strong bear arms, striped hide similar to a cross between a panda and a wasp, one set of ursine legs and two short antennae on their head. On their backs, there are two fairly small insectoid wings that through innate magic similar to pegasi, still carries the hefty creature.

The Bugbear, despite having no skill in using weapons or armor, is intelligent enough to understand pony and zebra speech, though it is incapable of replicating it. This can make it a formidable foe, as it can understand tactics of its opponents and plan ahead. This intelligence and force combined with its nasty temper and penchant for wanton destruction makes it the tyrant of the skies, as it is quite keen on growing its territories, sentient beings be damned. Somewhat more common in Enclave societies, this insectoid creature has wrecked many pegasus villages and settlements.

In the past, this malicious behavior has landed this creature and its kin straight to Tartarus, deemed too malicious to be kept close to society and they kept company to many evil creatures.

Unlike other bear-like creatures such as Yao Guai or Star-Spawn, Bugbears do not hibernate, though they're fairly rare sight in winter months nonetheless. Out of all of them, Bugbears have the shortest life-span of just 10 years.

Changeling

"I've only ever heard of Changelings from old mares' tales, describing them as some sort of pony and insect hybrid who serve under a Queen and feed off of a poor sod's love. One thing's for sure, I sure haven't seen any walking around here. Though... how would I even know, since they disguise themselves as ponies..? Curiously, I did get a receipt for goods I never purchased yesterday."

- Merchant Silver Bit

Type: Sentient

EXP: 100

STR 5, PER 7, END 4, CHA 8, INT 6, AGI 5, LCK 4

Diplomacy 60, MEWs 40, Melee 50, Sneak 60, Thaumaturgy 50, Unarmed 60

HP 14, DT 1, AP 12, Size 0, Karma -25 (default)

Potency 10, Strain 20

Immunities *none*

Resistances Poison 20%, Radiation 20%

Weaknesses *none*

Additional Combat Details:

Wasteland Weaponry: Changelings can equip themselves with weaponry and armor.

Chitin Armor: Changelings have natural armor, giving them 1 DT even when outside of any conventional armor.

Flying: Changelings have working wings, thus they are capable of flight. Changeling's flight speed is 1 AP for 4 meters (2 Hexes).

Changeling Magic: Changelings have access to Perception and Illusion Magic Schools.

Changeling Transform (3 AP): Changelings transform into other creatures, pony or otherwise. They can disguise themselves as any other creature within sizes -1 to 1, momentarily gaining their abilities, but not their stats.

Organized: Changelings have a strict hierarchy in their society. Outside of lone scouts and infiltrators, they strike as units and groups of various sizes, usually

under at least one commander. Eliminating such a leader often leaves rest of the team at disarray and demoralized; the entire group suffers a Minor Distraction when their leader is eliminated.

Creature drops:

- Changeling Chitin piece (1 u.)
- Changeling Horn (1 u.)
- Main Weapon (1 u.)
- Additional Weapon (1 u.)
- Armor or Clothing (1 u.)
- Junk (1d6, Survival doubles u.)

Continues on next page.

Changeling Queen

"Changeling Queen... Apparently this gangly, gnarly bug-pony rules over all other changelings. I wonder if it is out of respect or some sort of biological response? Anyway, old stories say the queens are highly deceitful creatures and powerful to boot, using mumbo-jumbo changeling magic to make ponies go all crazy in the head. Or so I've heard."

- Merchant Silver Bit

Type: Sentient

EXP: 800

STR 7, PER 7, END 5, CHA 8, INT 7, AGI 6, LCK 5

Potency 14, Strain 30

Immunities *none*

Resistances Poison 40%, Radiation 40%

Weaknesses *none*

Additional Combat Details:

Wasteland Weaponry: Changeling Queens can equip themselves with weaponry and armor.

Chitin Armor: Changeling Queens have natural armor, giving them 3 DT even when outside of any conventional armor.

Body Twisting: Changeling Queens are flexible, gaining a +1 DT against Attacks of Opportunity against them. She also has +1 AGI when using Break Free -action.

Changeling Magic: Changeling Queens have access to Perception and Illusion Magic Schools.

Hypnotize (6 AP): Changeling Queens can cast special magic only they can use. This magic can cause a Mind Controlled -Status Effect on a single target, with an Opposed roll of CHA, the target has a -1 on their roll. If the target successfully opposes the spell, the target can resist future Hypnotize-spells in that combat without a penalty on their CHA roll.

Flying: Changelings have working wings, thus they are capable of flight. Changeling's flight speed is 1 AP for 6 meters (3 Hexes).

Changeling Transform (3 AP): Changeling Queens transform into other creatures, pony or otherwise. They can disguise themselves as any other creature within sizes -1 to 2, momentarily gaining their abilities, but not their stats.

Royalty: Changeling Queens are the absolute ruler of their hive, and when in combat, also the highest power in the hierarchy. When she's alive or conscious her subjects cannot be distracted. When she goes down, her allies suffer Moderate Distraction instead of Minor.

Creature drops:

- Changeling Chitin piece (1 + Survival doubles u.)
- Changeling Horn (1 u.)
- Main Weapon (1 u.)
- Armor or Clothing (1 u.)
- Healing Item (1d2, LCK doubles)

Description:

Changelings are an insectoid species that live in hives much like ants or termites. They are pony-sized, and do not eat meat or plants. Instead, they sustain themselves by feeding on other creatures' love, which they drain like vampires.

Changelings live in hives ruled by a queen, below whom is a caste system of warriors and workers. Most of these hives are small due to a not-surprising shortage of love in the wasteland. Thus, many of these hives resort to banditry to survive, luring unwary travellers away from safety by posing as friends, relatives or other ponies in need of help. In fact, it is this ability to take on different shapes and forms that is the changelings' greatest asset, allowing them to infiltrate places and fool ponies. Some of them might even live among ponies for years, posing as a just another resident of a settlement.

Due to their isolation from each other, each hive has its own culture and customs. Some prey on caravans much like raiders, and others focus on infiltration tactics. Thus changelings themselves could potentially be anywhere.

Changeling Queens never steer far from the hive, as they oversee its day-to-day operations and command. It is only rarely that they travel far - often the reason for such travel is to relocate the hive to a much more safer spot. And even when relocating the Queen won't show her true self, having the same transformative powers as the warriors and workers. In tight spots - or expert infiltration - the Changeling Queen may use their special hypnotizing magic to gain temporary allies, to disable defenses and to better infiltrate.

Chimera

"I've heard stories of these mix-and-match critters, made of cats, snakes and I think an insect of some kind? Honestly, I've never seen one and I hope I never will. As far as locals' stories go, they lay eggs and their bite is venomous, so stay on guard just in case. You never know when one decides to use your guts for a nest."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 100

STR 4, **PER** 6, **END** 5, **CHA** 5, **INT** 4, **AGI** 4, **LCK** 6

Sneak 60, **Unarmed** 50

HP 7, **DT** 1, **AP** 12, **Size** -2, **Karma** 0

Immunities none

Resistances Poison 55%, Radiation 10%

Weaknesses none

Additional Combat Details:

Bite (3 AP): A powerful jaw accompanied by large twin fangs, that can easily pierce flesh. This attack deals 1+(2) damage and ignores 1 DT. In addition, it has a 1x40% chance of poisoning their target. The target removes 1 HP per turn, until healed with an Antivenom, spells or if the target dies. This HP loss is applied on the target's turn. Multiple bites do not enhance the poison once it has entered the target.

Slither: Chimera's ground movements are quicker than most ponies. Chimera's ground speed is 1 AP for 4 meters (2 Hexes).

Tetrachromacy: The Chimera can see in light ranges ponies cannot, making colors more vivid and bright. Because of this, Chimera get a +1 on their PER for spotting sneaking enemies, and ignore 10 points from Visibility penalties.

Fearless: Chimera are fierce hunters, willing to attack targets way bigger than themselves. Due to this, they cannot be intimidated into backing down, though they can still run from a fight not in their favor.

Creature drops:

- Chimera Eggs (1-6 units+ Survival doubles u.)
- Chimera Meat (Abomination flesh piece, 1-2+Survival doubles u.)
- Poison Gland

Description:

Chimera, a creature not in any way related to the mythical and likely extinct Chimera of the Fire Swamp, is the only creature not mutated by Taint or balefire, being instead the result of a magical accident.

Chimera are a mix of snakes, cats and some type of venomous insect. The insect part is often noticed only after the creature has attacked, as its venomous bite injects eggs into the target as well. If not treated quickly, the Chimera young will burst out of the host after 24 hours, if the poison doesn't manage to deal them in quicker.

Thankfully antivenom, if delivered quickly, is often enough to dispel both the poison and the now-dead eggs as the neutralized poison has allowed for the host body's immune system to attack the eggs as a foreign object. The eggs, little bigger than a button, drop out of the wound as if pushed out.

Chimera, due to their small size and relatively weak body prefer not to stick to a battle, instead opting for hit-and-run tactics; rush at target, bite them to insert eggs, retreat for a place to hide in. They often stalk their targets, preferring to hit solitary members than a big group. Chimera can be noticed with some ease even in darkness, as their large cat-eyes reflect light.

Chimera are not good swimmers and have an aversion to water. Due to this, they are also extremely rare, as the Stable 24 they origin from is surrounded by a river, meaning they have not gotten the chance to expand.

Cockatrice

"Cockatrice are interestingly enough highly resistant to most magical radiation. Thus, they've remained pretty much the same as they used to be before the war ended. And they were deadly then and they're deadly now, especially for their petrifying gaze."

- Verdant Brink, hunter

Type: Non-Mutated Animal

EXP: 50

STR 5, PER 6, END 5, CHA 5, INT 6, AGI 5, LCK 3

Sneak 50, Unarmed 50

HP 7, DT 0, AP 11, Size -1, Karma -25

Immunities Radiation

Resistances Poison 15%

Weaknesses none

Additional Combat Details:

Beak (3 AP): While stubby, cockatrice's beak is still sharp, and accompanied by its strong serpent muscles to put behind some force. The beak deals 1 + (1) damage.

Petrifying Gaze (7 AP): Cockatrice's eyes unleash a magical spell-like reaction on anything it makes eye-contact with, slowly turning the target to stone. Target may try to resist locking eyes with the beast with a PER-2 roll, and a failed roll results in eye-contact. The target is fully petrified in 3 turns. Characters with sunglasses get no penalty on their PER roll.

Cockatrice can revert the process at will, but shattered petrified creatures remain stone. Killing the cockatrice will result in its victims remaining as statues forever.

Flying: Cockatrice have working wings, thus they are capable of flight. Cockatrice's flight speed is 1 AP for 4 meters (2 Hexes).

Coward: Cockatrice is not an especially strong fighter, and tends to try hit-and-run tactics with its Stare-ability. Cockatrice have a -2 on INT to resist intimidation tactics. When it reaches Pain Thresholds, there is a chance it will flee as if intimidated.

Creature drops:

- Beak (1 u.)
- Wings (2 u.)

Description:

Cockatrice are serpents with leathery, dragon-like wings and the head of a rooster. They are solitary mythological creatures, and have somewhat mean, bully-like behavior; they prefer to attack creatures that they consider to be easy targets.

Largely cowards by nature, they tend to try to surprise their target with their stone turning gaze and run away, leaving the victim behind. Due to the abovementioned cowardice, they are easy to intimidate, should one get a hold of them. The cockatrice can undo their petrifying spell at will, but any petrified creature that was shattered will remain a statue. Killing the cockatrice also renders the statue to remain stone forever.

As far as can be deciphered, it seems that the cockatrice doesn't actually hunt ponies and other big, sentient creatures for food, but rather to decorate their territory for mating season; the bigger their statue collection, the more fearless and mighty they seem, all in purpose of attracting a female cockatrice to mate with.

Cockatrice prefer areas with plenty of hiding places, such as thick forests or urban ruins and generally avoid any open plains-like area if they can.

Dragon

"You want to know about dragons? Well... they're super rare, for one. And I have heard they like to collect large hoards of gems and gold. Hey, where you going...!? Come back, you'll be dead ages before you get to the dragon's hoard! ...Eh, maybe he knows what he's doing. Or maybe the dragon will roast him in his metal armor with its firebreath. That's what you get for not paying for your info."

- Merchant Silver Bit

Type: Sentient

EXP: 1000

Barter 70, Diplomacy 60, Intimidation 70, Sneak 50, Unarmed 50

HP 20, DT 6, AP 14, Size 3, Karma varies

Immunities Fire

Resistances Poison 40%, Radiation 40%

Weaknesses none

Additional Combat Details:

Firebreath (10 AP): The notorious trait of dragons, is their ability to breath fire of immense temperatures. The firebreath can take two forms:

First form is a line of fast scorching flames, with a range of 10 meters (5 hexes). This deals $5+(6)$ damage, with a 2x20 % chance of causing Burning.

The second form is a fiery sphere that sets an area of Large Splash template ablaze. This area burns for 3 turns, dealing $3+(2)$ damage per turn, with a chance of causing Burning.

Bite (7 AP): A mighty jaw with rows of razor sharp fangs. Deals $6+(3)$ damage, and ignores 4 DT. Dragons have Reach of 6 meters (3 hexes).

Rend (5 AP): The dragons' claws are sharp and capable of ripping apart metal and stone. The attack deals $3+(5)$ damage, and ignores 2 DT. Dragons have Reach of 6 meters (3 hexes).

Flying: Dragons have working wings, thus they are capable of flight. Dragons' flight speed is 1 AP for 6 meters (3 Hexes).

Vanity: Dragons can be vainglorious creatures, appeased by flattery. A target attempting to flatter a dragon gains +10 temporary bonus to Diplomacy. If the

Diplomacy check fails, the following Diplomacy checks against the dragon suffers -10 instead.

Creature drops:

- Dragon Hoard; Gem (value estimated 4000 caps)
- Dragon Hoard; Precious item (value estimated 2000 caps)
- Dragon Scale (1d6+ Survival doubles u.)
- Dragonfire Essence (1d2+ Survival doubles u.)

Balefire Dragon

"The ghoulified dragon, ghoul-dragon, zombie dragon... many names for a horrible thing. Twisted by necromatic magic, their fire breath could as well be a balefire egg. If you can, don't engage them. If you absolutely have to, then try to stay away from their fire."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 1500

HP 20, DT 6, AP 14, Size 3, Karma varies

Immunities Fire

Resistances Poison 40%, Radiation 80%

Weaknesses none

Additional Combat Details:

Irradiated Firebreath (10 AP): Balefire dragon's fire breath has been thoroughly irradiated. The fire breath can take two forms:

First form is a line of fast scorching flames, with a range of 10 meters (5 hexes). This deals 5+(6) damage, with a 2x40 % chance of causing Burning. If the Burning is successful, the target takes 2 Rads with 2x70 % chance of infliction.

The second form is a fiery sphere that sets an area of Large Splash template ablaze. This area burns for 3 Rounds, dealing 3+(2) damage per turn to all in the area, with a chance of causing Burning. For these 3 rounds, the area deals 1 Rad at 2x70 % chance per turn.

Bite (7 AP): A mighty jaw with rows of razor sharp fangs. Deals 6+(3) damage, and ignores 4 DT. Balefire dragons have Reach of 6 meters (3 hexes). When there's a successful hit, there's a chance the target taking 2 Rads at 2x70 %.

Rend (5 AP): The dragons' claws are sharp and capable of ripping apart metal and stone. The attack deals 3+(5) damage, and ignores 2 DT. Dragons have Reach of 6 meters (3 hexes).

Rad Healing (1/min, 8 AP): The Balefire Dragon may choose to discard 2-5 Rad Tokens, and replenish an equal amount of lost HP and/or Crippled Conditions, if any are present.

Non-Flying: Balefire Dragons have lost their capability to fly due to necromantic magic corrupting them. They're still fast creatures, with a movement speed of 1 AP for 2 meters (1 hex).

†Sentience: As a rare occurrence, Balefire Dragons may retain their sentient minds. A sentient Balefire Dragon has additional +2 INT, as well as access to Diplomacy and Barter.

†Vanity: Dragons can be vainglorious creatures, appeased by flattery. A target attempting to flatter a dragon gains +10 temporary bonus to Diplomacy. If the Diplomacy check fails, the following Diplomacy checks against the dragon suffers -10 instead.

Creature drops:

- Dragon Hoard; Gem, Irradiated (value estimated 4000 caps)
- Dragon Hoard; Precious item, irradiated (value estimated 2000 caps)
- Abomination Flesh (1d6+ Survival doubles u.)
- Irradiated Material (1d2+ Survival doubles u.)

Description:

The mighty dragon is a sight to behold, with their strong, durable frame and thick scales that cover them from head to toe. Along with their magical dragonfire and capability to withstand intense heat, to the point that lava and firestorms are little more than a bath and a shower for them.

Dragons are some of the more fearsome foes one can find, but they are sentient creatures, and as such, can be willing to negotiate. Especially if their favorite food, gemstones, are involved. However, should negotiations go awry, battle is imminent as a slighted dragon is an angry one. Then, out comes the fire breath and metal-shredding claws.

Most dragons value competition and strength of individual, leaving many pony-customs of friendship and cutesy things in the dust, though this behavior is more pronounced in the young dragons. Older dragons tend to turn vain, but less aggressively macho.

Dragons' size is somewhat affected by their hoards and greed needed to gather such a large collection of priceless items, gold and gems; though they do grow more naturally as well. The bigger the hoard, the larger the dragon.

A Dragon Lord is the ruler of the dragon, usually decided by a competition, though it may vary what kind the competition actually is. This competition is usually designed by the previous Dragon Lord, who will relinquish the symbol of their might, a Bloodstone Scepter, to the winner of the competition.

Dragons are a rare sight in the Equestrian Wasteland, as they usually reside in Dragon lands, described as a barren, flat and stony plain with very little animal or plant life.

A variant of the dragon is the Balefire Dragon, an occasionally sentient, but most commonly a feral creature. Despite the balefire having been made with dragonfire as the basis, this has not worked for the dragons' advantage; twisted by balefire's necromantic magic, the Balefire Dragon is a shadow of its former self. Balefire Dragons have suffered damage to their brain due to their ghoulification, but they're still substantially more intelligent than most abominations. Unlike regular dragons that feel and answer the call of a dragon lord, Balefire Dragons are unable to answer the call.

The Balefire Dragon is often a bleached white color, with a sickly green glow to their eyes, nose and mouth.

Enclave

"Well, I've only gotten to meet any of the Grand Pegasus Enclave -Snrk! Hah...!- Sorry, something in my throat, fairly recently. Lovely, lovely bunch of utter buckers, if you ask me. I have no doubt that they might have one or two good guys in them, but most of them believe the indoctrination they've been given by their government, that they're the only pure pony race due to the cloud cover having protected them from the rads... Well, you don't see a hoof sticking out of my chest, despite me being a 4th gen Wastlander."

- Merchant Silver Bit

HP 15, DT 0, AP 14, Size 0, Karma varies

Potency 15, Strain 25

Immunities *none*

Resistances Poison 5%

Weaknesses *none*

Additional Combat Details:

Enclave Weaponry: Any forces of the Enclave that come to contact with the Wasteland make a point to wear the intimidating Enclave Power Armor. This is also to shield them from the lingering radiation. In battle, Enclave soldiers use Cloud weapons nearly exclusively, as they're an Enclave design. Enclave Power Armor has 6 DT.

Enclave Magic: Enclave's Pegasi favor all three styles of Aerial Maneuvers, and commanders have a Wonderbolt Maneuver available to them.

Purity: Enclave is made up of pegasi exclusively, and consider other races -and groundborn pegasi- as beneath them. Enclave soldiers get a (+1) to damage when targeting other sentient races.

Organized: The Enclave have hierarchy of leadership. They strike as units and groups of various sizes, usually under at least one commander. Eliminating such commander often leaves rest of the team at disarray and demoralized.

Rad Intolerant: The cloudcover has kept much of the Wasteland's harms out of the pegasi lifestyle, and as such, they never grew a tolerance to the lingering radiation that other races were exposed to constantly. Many try to shield themselves with appropriate apparel.

Creature drops:

- Cloud Weapon (1)
- Armor (1)
- *Aerodynamics Monthly* magazine (1, LCK-2 to obtain)
- Healing Item (1, LCK doubles u.)

Description:

The Grand Pegasus Enclave, often referred to as Enclave for short, is a militant, technologically advanced yet somewhat secretive faction of Pegasus ponies that serves as the governing body above the clouds. They claim to be the continuation of pre-War Equestrian society, proving their point with extreme measures if need be. As such, they are extremely isolationist in nature and won't take in new members from below the cloud cover, styling anyone born below the clouds as "a mutant", even other pegasi.

The Enclave society is strictly regulated, following the old traditions of Pegasi culture - even from prior Equestria's time as a united nation. While highly militaristic in nature, all important decisions go through a legislative council for approval - even military campaigns.

The Enclave utilizes cloud weaponry in all its forms - from pistols and rifles to various cloudships. The exact nature of the scale of their weaponry is unknown, as their excursions to the Wasteland are in small numbers.

When the Enclave sends teams to the Wastes, they're well-equipped and have clear instructions on their mission - and are always accompanied by a team leader, their rank dependent on the size of the team. Their excursion to the Wasteland is for the completion of the mission only, and they won't let anyone stand in their way to its eventual success.

Equitron

"Possibly the first robots that could move and... well, think. And frankly, they're not that good at that - roaming in the ruins where they were left, doing the same tasks that were programmed into their arcana-drives by their masters long gone. Actually, that 'thinking' part might be overestimating their capabilities..."

- Scribe Star Twinkle

Type: Machine

EXP: 150

STR 8, **PER** 5, **END** 6, **CHA** 3, **INT** 3, **AGI** 4, **LCK** 4
Firearms 50, **MEWs** 50, **Melee** 50, **Unarmed** 50

HP 10, **DT** 2, **AP** 10, **Size** 0, **Karma** 0

Immunities Poison, Radiation, Pain Thresholds

Resistances Poison 5%

Weaknesses *none*

Additional Combat Details:

Laser Beam (4 AP): Equitrons are outfitted with a *Q-Same AEW-5 Arcane Pistol*, dealing 1+(2) damage and ignoring 1 DT.

Cutter (4 AP): Equitrons are outfitted with a Ripper, and deal damage accordingly, in Equitron's case 4+(4).

Riot control (4 AP): If an Equitron successfully grapples someone, they may cause a Stun-status effect with an END roll to resist.

Self-destruct: Upon reaching 0 HP, Equitron explodes with a Small Splash template centered on itself. Deals 2+(2) damage.

Slow: Equitrons have slower ground movements than most ponies due to their mechanical but rigid legs, giving them movement speed of 2 AP per 2 meters (1 hexes.)

Combat Inhibitor: Equitrons are equipped with a combat inhibitor, that help them separate friends from woes. Combat inhibitor can be hacked with Science to various ends, such as shutting down the Equitron. Destroying the combat inhibitor turns Equitron against anything around them.

Painless: As a machine, Spider-Bot has no Pain Thresholds.

Creature drops:

- Scrap ArcanoTech (1d2+Mechanics doubles u.)
- Scrap Metal (1d4+Mechanics doubles u.)
- Magical Component (1d4 u.)
- Gun Component (1d4 u.)
- Ripper (1)

Description:

Equitrons are four-legged mechanical beings that resemble their creators loosely. Slow and cumbersome, these robotic ponies may have easily been surpassed later down the line with an improved model if it were not for the Great War. However, they're reliable and programmed to specific tasks, thus making them ideal in many scenarios, both pre- and post-War.

Equitrons are noted to be the first moving robots, and are very sturdy as a result. Their original development cause by Robronco has been forgotten, but a myriad of models exist based on the same base model - be it construction, peacekeeping, or monorail ticket inspector role. They're very strictly programmed - thus working against the robot's instructions may incur its wrath and pacifying protocols. An expert mechanic may tweak the robot's parameters to more of their liking, and a skilled hacker may reprogram the robot from a linked terminal.

Given the myriad of roles it was assigned for, one can easily find Equitrons almost anywhere where there has been ponies, most often within urban centers. Due to their programming, they hardly wander off of their designated areas. And when they do, they're certainly glitchy in coding and hostile in attitude.

Feral Dog

"Not exactly your garden variety of Fido, they're the descendants of the countless dogs that remained after the war, fighting for survival. Hence why they're not truly wild, and can, with patience, be tamed. Just... takes a lot of time and effort. And bites, lots of bites. That's really all they do, try to go for the jugular."

- Verdant Brink, Hunter

Type: Mutated Animal

EXP: 50

STR 7, PER 4, END 6, CHA 3, INT 1, AGI 8, LCK 4
Sneak 55, Unarmed 45

HP 6, DT 0, AP 14, Size -1, Karma 0

Immunities none

Resistances Poison 10%, Radiation 15%

Weaknesses none

Additional Combat Details:

Bite (4 AP): Feral dogs try to use their natural weapons, jaws, to take down creatures. The attack deals 1+(2) damage, and can cause a Bleeding-status effect.

Quick Runner: Due to their nimble bodies, Feral Dogs gain +2 to initiative rolls.

Pack Hunters: Feral dogs travel mostly in packs, and strike as a force to bring down their prey. When two or more feral dogs attack same target, they get +10 to Trip attempts.

Creature drops:

Dog Meat (1-4 pieces, Survival doubles u.)

Feral Mongrel

"Feral Mongrel is the ghoulified variant of a feral dog, usually found skulking about in highly irradiated areas. They're a little tougher than a regular dog, and they seem to prefer the company of other ghoul creatures. So don't be surprised if a few mongrels tag along a feral or some sane ghoul, seems even after ghoulification they're determined to be a ghoul's best friend."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 50

STR 7, PER 4, END 6, CHA 3, INT 2, AGI 8, LCK 4

Sneak 60, Unarmed 55

HP 9, DT 1, AP 14, Size -1, Karma 0

Immunities none

Resistances Poison 10%, Radiation 50%

Weaknesses none

Additional Combat Details:

Irradiated Bite (5 AP): Feral Mongrels try to use their natural weapons, jaws, to take down creatures. The attack deals 1+(3) damage, and can cause a Bleeding-status effect. The bite can also deal 1 Rad on 1x40% chance.

Glowing Lick (5 AP): Feral Mongrels have irradiated saliva, and generally tend to be rather sloppy. Their saliva, which they deliver with fierce licking of target, deals 1 Rad on 3x40% chance.

Quick Runner: Due to their nimble bodies, Feral mongrels gain +2 to initiative rolls.

Pack Hunters: Feral mongrels travel mostly in packs, and strike as a force to bring down their prey. When two or more feral dogs attack same target, they get +10 to Trip attempts.

Creature drops:

- Mongrel Meat (Abomination flesh piece 1d2+Survival doubles u.)
- Mongrel Saliva (Irradiated Material 1+Survival doubles u.)

Description:

Dogs, the canine friends of ponies, did weather the destructive end of the world like their masters. Most that survived and were left without their owners quickly learned the harsh truth of the wasteland, turning them to their feral, untamed ways.

Feral dogs can be seen roaming almost anywhere in the wastes. No spot is too strange for them, and with a large pack they can claim any ruin as their home. They do have a tendency to steer clear from heavily robotically guarded buildings, for they cannot down the mechanical beasts with ease.

Feral dogs can appear alone, but most often one can find them in groups of 2-4, depending on location. They tend to rush to a target, aiming for the throat to take the target down as quickly as possible. However, unless they manage to catch one unawares, they're relatively easy to fend off.

These dogs can, and often have been tamed, but it has sometimes taken a few generations' worth of feral dogs to bring back the companion many ponies know and love. These dogs are often bred and sold as companions to all. Some raise them to be attack and guard dogs, while others prefer a calmer companion for their daily tasks.

Feral Mongrels behave much in the same way, with the only exception to the feral dog being their irradiated, pale and hairless skin and slightly more intelligent behavior. Feral dogs and Feral mongrels rarely mix, preferring to have their own, separate packs.

Feral Ghoul

"The ever-popular zombie of the Wastes. What remains of a mutated pony after they've went a bit too soft in the head. Unfortunately for you, they're vicious, fast and they really want to tear your face off. So Initiate, better have that rifle ready, because they won't wait for you to pull it out. They're radioactive as well, so hope you packed enough Rad-Away."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 100

STR 5, PER 6, END 5, CHA 2, INT 1, AGI 7, LCK 4

Sneak 50, Thaumaturgy 50, Unarmed 40

HP 12, DT 0, AP 13, Size 0, Karma 0, Rads 5

Potency 11, Strain 15

Immunities none

Resistances Poison 10% (20% if zebra)

Weaknesses none

Additional Combat Details:

Irradiated Hoof (5 AP): Feral ghoul's hoof-strike deals 1+(3) damage, and gives 1 Rad Token at 2x50% chance.

Rad Healing (1/min, 8 AP): The ghoul may choose to discard 2-5 Rad Tokens, and replenish an equal amount of lost HP and/or Crippled Conditions, if any are present.

Pain Tolerance: Due to their fervor with which they attack, Ferals have learned to ignore pain. Feral Ghouls' Pain Thresholds begin from 3-2 and 1, rather than starting from 5-4.

Quick Runner: Feral Ghouls are fast, and due to this they get a +2 to their Initiative rolls.

Instinct: Feral Ghouls are able to use their innate magic, though in limited ways. For instance, Unicorns have General school spells available to them, while griffins and pegasi can take to the air and fly towards their targets. Earth Pony and Zebra ghouls have +(1) to their damage.

Creature drops:

- Ghoul Flesh (Abomination flesh piece 1d2+Survival doubles u.)
- Junk (1d6)
- Random Clothing or Armor in Poor Condition (1 u.)
- Caps (1d12, LCK doubles u.)

Glowing One

"If you thought the regular old Feral was annoying to deal with, take a load of this. Glowing One. It behaves much like other ghouls, but it is irradiated so badly that it radiates. As you can probably guess from the name. They can also release this radiation at you with a burst, so stay away from them. You'll get sick in no time."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 200

STR 6, PER 6, END 7, CHA 3, INT 2, AGI 7, LCK 4

Sneak 80, Thaumaturgy 70, Unarmed 70

HP 15, DT 0, AP 13, Size 0, Karma 0, Rads 10

Potency 13, Strain 20

Immunities none

Resistances Poison 10% (20% if zebra)

Weaknesses none

Additional Combat Details:

Irradiated Hoof (5 AP): Glowing One's hoof-strike deals 2+(4) damage, and gives 2 Rad Tokens at 2x60% chance.

Irradiated Burst (1/min, 8 AP): Having soaked up radiation, the Glowing One can expel Rads in a Splash around it, in a Small Splash Template centered on the ghoul. This attack gives 1 Rad Token at 5x50% chance.

Rad Healing (1/min, 8 AP): The ghoul may choose to discard 2-5 Rad Tokens, and replenish an equal amount of HP tokens and/or Crippled Conditions, if any are present.

Irradiated Presence: Glowing Ones positively glow with radiation - hence their name. Being close to them heals ghoulified characters and damages non-ghouls. Each turn spent within a Small Splash Template around the Glowing one gives 1 Rad Token at 1x40% chance.

Pain Tolerance: Due to their fervor with which they attack, Ferals have learned to ignore pain. Glowing Ones' Pain Thresholds begin from 3-2 and 1, rather than starting from 5-4.

Quick Runner: Glowing Ones are fast, and due to this they get a +2 to their Initiative rolls.

Illuminated Body: The Glowing Ones constantly emit a sickly glow from their body, meaning that they have -20 penalty on Sneak. In addition, within Large Splash Template of the ghoul everyone ignores 10 points of Visibility penalties from darkness, including the Glowing One.

Instinct: Glowing Ones are able to use their innate magic, though in limited ways. For instance, Unicorns have General school spells available to them, while griffins and pegasi can take to the air and fly towards their targets. Earth Pony and Zebra ghouls have +(1) to their damage.

Creature drops:

- Glowing Flesh (Irradiated material 1d2+ Survival doubles u.)
- Random Skill Magazine (1, LCK-2 to obtain)
- Junk (1d6)

Canterlot Ghoul

"A "Grade A" ghoul, a real elite sonnuvagun if you ask me. You really don't want to run into one of these unprepared, though considering they stay fairly close to Canterlot ruins, the chance of running into one is rather slim. Which is about the only nice thing about these ghouls, as they're nigh unkillable. Like in the old documentaries, like Night of the Living Dead, remove the head."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 600

STR 7, PER 6, END 8, CHA 2, INT 3, AGI 7, LCK 4

Sneak 80, Thaumaturgy 70, Unarmed 70

HP 12, DT 2, AP 13, Size 0, Karma 0, Rads 15

Potency 15, Strain 25

Immunities Poison

Resistances none

Weaknesses none

Additional Combat Details:

Irradiated Hoof (5 AP): Canterlot Ghoul's hoof-strike deals 3+(5) damage, and gives 2 Rad Tokens at 2x50% chance.

Pink Cloud Broadcaster (1/min, 5 AP, 3 Strain): Some Canterlot Ghouls have Pip-Bucks that, similarly to themselves, have become warped with the necromantic magic of Pink Cloud. Once per minute (10 rounds), the Canterlot Ghoul can disperse a necromantic sound that deals 1+(4) damage directly to those in range. The attack's range is *Small Splash area*, centered on the caster.

Pink Breath (10 AP): The necromantic magic surging and upholding the ghoul's body is evident in their pink-hued breath that they can release, carried by the necromantic magic towards their target. This attack deals 1+(2) damage, and may inflict a host of status-effects and poison. These status effects are: Bleeding, Blinded and Dazed. Each effect is resisted separately. In addition, the breath can poison their target with an effect that stops their Strain-recovery from functioning with 1x 50% chance. **This attack ignores DT.**

Rad Healing (1/min, 8 AP): The ghoul may choose to discard 2-5 Rad Tokens, and replenish an equal amount of HP tokens and/or Crippled Conditions, if any are present.

Self-Restoration: Canterlot Ghouls regain HP each turn. Canterlot Ghouls heal 2 HP per turn. Their head is their weak point, and cutting it off will render them temporarily inactive, only for them to resurrect with Canterlot's necromantic magic in 24 hours. If they're vaporized/turned into goo by energy weapons/magic, their resurrection stops functioning.

Painless: Having been mutated not by radiation but by Pink Cloud, the Canterlot Ghoul feels so little pain that they do not suffer from Pain Thresholds.

Quick Runner: Canterlot Ghouls are fast, and due to this they get a +2 to their Initiative rolls.

Instinct: Canterlot Ghouls are able to use their innate magic, though in limited ways. For instance, Unicorns have General school spells available to them, while griffins and pegasi can take to the air and fly towards their targets. Earth Pony and Zebra ghouls have +(1) to their damage.

Creature drops:

- Abomination Flesh (Abomination Flesh Piece 1d2+ Survival doubles u.)
- Random Skill Magazine (1, LCK-2 to obtain)
- Junk (1d6)

Description:

While turning into a ghoul provides one with the benefits of longevity, sometimes the age will catch up on the ghouls. Or some other trauma made them lose their minds, turning them to the feral state. While still capable of basic instincts, the feral ghouls differ from their non-feral cousins in that they no longer think rationally, being closer to animals with their sentience.

Feral ghouls gather together in small packs, preferring dark and cool environments to call their little base - like basements or underground passageways. They do not, however, fear light as some may think, perfectly capable of wandering the wasteland. Occasionally they gather in irradiated areas, as they note the restorative effects of the fallout - as with normal ghouls, not only feral ghouls do not suffer negative effects from radiation, they are practically healed by it.

Feral ghouls do not create complex plans of attack - they tend to swarm any intruder they spot, usually alerting their pack with a scream for additional power before charging. They do, however, retain some memories of their old life, and usually use the skills and tactics they have learned in occasion - often helping the feral pack as a whole.

Glowing ones are special ghouls, having become conduits of radiation themselves. They emit this radiation around them, and occasionally shed it in large bursts around them - effectively healing their ghoul friends.

Canterlot Ghouls are a very special variant of a feral ghoul; instead of having been mutated through regular magical radiation, they've instead been warped much further by the Pink Cloud -megaspell that decimated the city they're named after.

They do not tend to stray far from Canterlot Mountain, most commonly found in the forgotten ruins themselves, or the surrounding decimated villages at the base of the mountain. They're known to be nigh-unkillable, resisting damage by resurrecting from many normally fatal blows. However, dismemberment, especially by divorcing their heads from their bodies, and getting reduced to ash or goo will be effective against them.

Slightly more intelligent than their fellow ferals, Canterlot ghouls tend to ambush their prey. Also as a signal to their slightly better intelligence is the fact that they're able to discern sane ghouls from ferals, and often attack sane ghouls the same as they would a regular creature. Despite this, it would be offending to call them intelligent creatures, as they do not attack as a coherent unit even when they ambush something that has gained their ire.

Fire Ant

"So, the biological weapon we were asked to engineer for MoA... I call it the Fire Ant. I know, not the most original of names, but I'm a scientist, not an artist. It can spew burning liquid at least four meters in length and they're huge! Who knew I.M.P had such wonderful properties? Now if only I could get in contact with MoA..."

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 100

STR 6, PER 5, END 6, CHA 3, INT 2, AGI 7, LCK 5

Sneak 60, Unarmed 70

HP 10, DT 2, AP 13, Size -1, Karma 0

Immunities none

Resistances none

Weaknesses none

Additional Combat Details:

Pincers (8 AP): Fire Ants will try to bite and rip ponies legs off with force. This attack deals 2+(3) damage. The attack has 10% base chance of causing Crippled status, with each removed HP token adding 10% to this chance.

Firebreath (1/min, 6 AP): Fire Ants can spray a burning liquid with a range of 4/8/12 on a Small Splash template. This attack deals 1+(4) of damage, with a chance of causing Burning. This fire stays lit for 3 turns.

Territorial: Fire Ants will defend their nests ferociously and with great numbers.

Insect Brain: Crippling the Fire Ant's antennae causes the Ant to gain Mind Controlled and Enraged -status effects and make them attack the nearest creature, be it friend or foe.

Creature drops:

Ant Nectar (1-2+ Survival doubles u.)

Fire Ant Queen

"The fire ant queen was a resounding success! Only after three tries of dipping them in I.M.P. it has generated the desired traits without defects like dying on the spot. And it seems to keep its wings well after mating too... This is fantastic, they can assist the pegasi in air-raids with their firebreath!"

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 400

STR 7, PER 5, END 7, CHA 2, INT 2, AGI 8, LCK 5

Sneak 70, Unarmed 70

HP 16, DT 4, AP 13, Size 3, Karma 0

Immunities none

Resistances none

Weaknesses none

Additional Combat Details:

Pincers (8 AP): Fire Ant Queens will try to bite and rip ponies legs off with force.

This attack deals 5+(3) damage. The attack has 10% base chance of causing Crippled status, with each removed HP token adding 10% to this chance.

Firebreath (1/min, 6 AP): Fire Ant Queens can spray a burning liquid with a range of 8/16/24 on a Small Splash template. This attack deals 2+(4) of damage, with a chance of causing Burning with -1 END to resist.

Sweep (6 AP): Fire Ant Queen can make a sweeping motion with its first pair of legs. This attack deals 2+(2) damage. This attack also provokes a Trip attempt, with +20 on the Opposed Unarmed or Melee roll for the Ant Queen.

Body Slam (13 AP): The Fire Ant Queen flies high up in the air and drops down onto its unfortunate victims, friend and foe alike. This attack deals 2+(7) damage within Small Splash Template, centered on the Queen.

Flight: Fire Ant Queens have working wings, which they use well. Their flight speed is 1 AP for 2 meters/1 hex.

Reach: Fire Ant Queens have a reach of 4 meters / 2 hexes.

Royal Guard: When the Fire Ant Queen goes below half HP (8 HP), all Fire Ants within the Queen's colony gain an Enraged -status effect.

Insect Brain: Crippling the Fire Ant's antennae causes the Ant to gain Mind Controlled and Enraged -status effects and make them attack the nearest creature, be it friend or foe.

Creature drops:

- Ant Nectar (1d4+ Survival doubles u.)
- Ant Pheromones (1+Survival doubles u.)

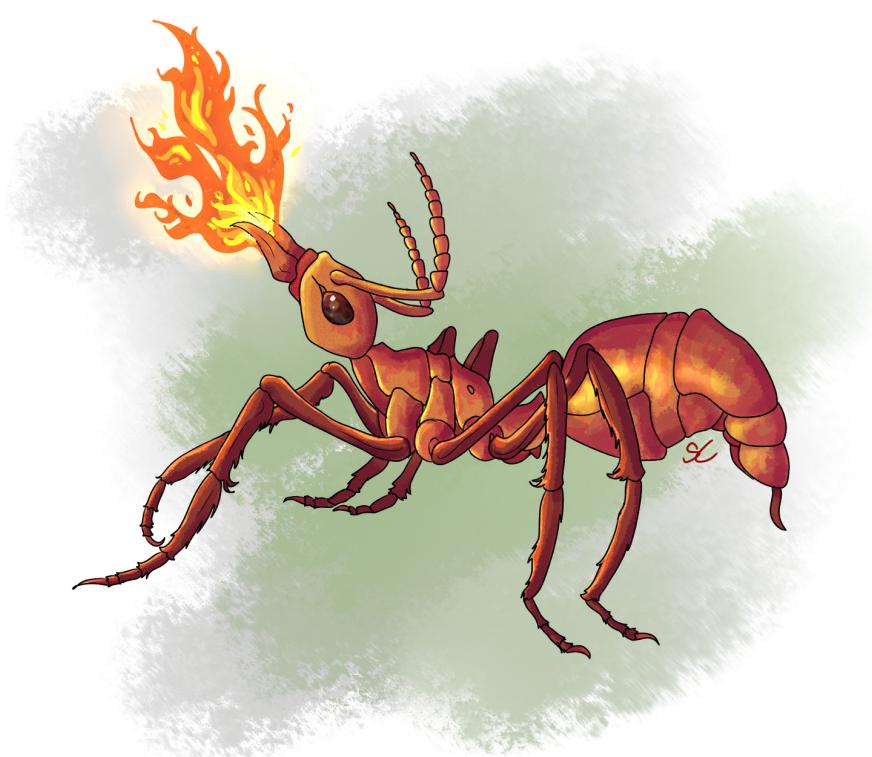

Description:

Fire ants are, by comparison, more aggressive and magical counterpart of the giant ant. Developed from another ant species intentionally, it possesses abilities that giant ants do not have: ability to breathe fire.

Easily recognizable from their red and orange color scheme, these vicious creatures do not make the slightest attempt to blend in, relying on both strength of numbers and their firebreath to singe everything they deem an obstacle. Once they enter an area, they will dedicate all of their power to build a nest -usually a large mound partially underground- and then eradicate all competition from the area. Due to this, it is rare to see different insects in an area with a large colony of fire ants.

Fire ants do usually use their firebreath only to fend for themselves, to keep safe distance from their enemy. For prey, mandibles are usually deemed good enough. The fire ants include much in their menu, including other insects such as radroaches and giant ants to brahmin, geckoes and jackalopes. They also include Cockatrice in their natural diet, as they are immune to Cockatrice's stone-turning stare, likely derived from their I.M.P. dip.

Fire ant queens are different from giant ant queens in that they retain their wings even after birthing a colony's worth of workers and soldiers. This means that this highly aggressive mama can and will pursue their offender if other defenses for the nest fails. And much like any angry mother, she is relentless in her pursuit.

Firebush

"Originally from the bayou, this mutated plant spits out its seed pods at anything it senses moving by. These seed pods contain both seeds and a highly flammable oil, that upon exploding on the victim's face or body, reacts with air and sets ablaze immediately, giving the seeds a nice, ashy earth to sprout from. Unfortunately, it is a very large bush... but thankfully, it's range isn't terribly long. Nevertheless, nasty burns are in your future."

- Doc Holly

Type: Mutated Plant

EXP: 50

STR 4, PER 7, END 6, CHA 3, INT 1, AGI 4, LCK 6

Melee 60, **Unarmed** 60

HP 12, DT 1, AP 12, Size 1, Karma 0

Immunities none

Resistances Poison 20%, Radiation 50%, Fire +4 DT

Weaknesses Cold (2x DMG)

Additional Combat Details:

Seed Burst (6 AP): Firebush spits out its seed pods (Melee, range 10/20/30), coated in a flammable oils that explode upon contact. The attack deals 2+(1) Fire damage, and can cause a Burning-status effect.

Immobile: Firebush are rooted in place, so they have no movement speeds.

Creature drops:

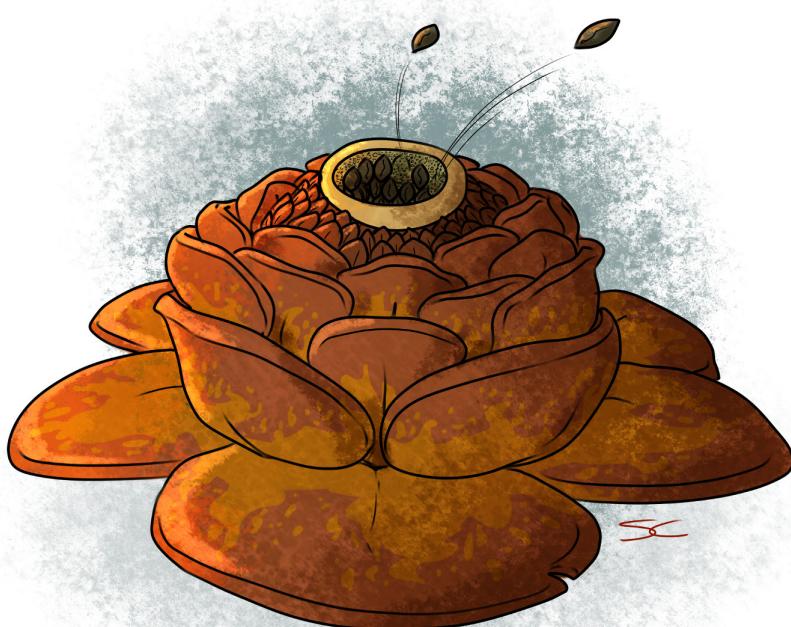

- Firebush Oil (1+Survival doubles u.)
- Firebush Seed Pod (1d4 with Survival)
- Red Herbs (1d4+Survival doubles u.)

Description:

Firebush is a large plant that mostly inhabits marshes and wetlands. As it is a plant, it doesn't act with vindictive manner, mostly targeting moving creatures for the sake of spreading its seeds. The firebush requires an ashen ground to sprout properly and the plant has evolved with its mutations to ensure that. The seed pods contain a flammable oil that sets ablaze the moment it comes into contact with air when the fragile shell of the seed pod breaks. This chemical reaction causes an explosion that can be fatal. However, this is the plant's only

harmful effect. In fact, the plant in question is downright harmless when the seeds have not developed yet.

If one is able to collect the seed pods without breaking them, they can be made into makeshift bombs.

Flash Bee

"Originally the Flash Bee has inhabited mostly bogs and swamps, but after the war it spread far further, and their nests are far more common sight in the Wastes. Their nests are rarely seen close to urban areas, having an aversion to being bothered. If bothered, they attack viciously."

- Acacia Honey, Entomologist

Type: Non-Mutated Insect

EXP: 200

STR 3, PER 8, END 4, CHA 3, INT 2, AGI 8, LCK 5

Sneak 30, Unarmed 60

HP 10, DT 0, AP 12, Size -3, Karma 0

Immunities Poison, Radiation

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Shock Stinger (4 AP): Flash Bees' main method of attacking is to aggressively sting anything that it can reach. Their stinging deals $3+(2)$ electric damage, with a chance of causing Stunned with +1 END to resist.

Flying: Flash Bees move by flight, moving with erratic movements. Their flight speed is 4 meters (2 Hex) for 1 AP.

Swarm o' Bees: Flash Bees cover an area equal to Small Splash Template. They can move to an occupied hex, and can attack any creature within said area for the cost of one attack. Due its large size of swarm, explosives and other similar Area of Effect attacks consider Flash Bees to be Size 0.

Quick Flier: Flash Bees are fast, and due to this they get a +2 to their Initiative rolls.

Creature drops:

Flash Bee Honey (1 u., Survival doubles u.): The honey from the Flash Bee nests is both nutrient-rich and a natural antivenom for most poisons. Flash Bee Honey returns 2 HP when consumed, and can be used in place of Antivenom.

Description:

Flash Bees are notoriously aggressive bee-species with an electric disposition. They build their nests in trees, usually some ways away from urban areas, as they have a great aversion to being bothered. Their magnificent honey, however, often attracts everything from Bugbears and Yao Guais to various pony merchants towards their nests, much to the bee colonies' annoyance.

If bothered, these small creatures quickly form a swarm, attacking in unison as if with a hivemind to dispose of any intruders. An unprepared gatherer can quickly find themselves engulfed by a swarm of yellow and blue -striped bees and stunned by them. Once they deem their source of annoyance neutralized, they usually cease attacking and return to their nest.

Floater

"This sickly green plant floats around with gas-filled sacs, dragging behind it a long tail-like stalk used to trip and beat a chosen victim. It has a sphincter-like orifice from which it shoots out a thick goo containing its pollen, using the passing victim as a way to reproduce. This goo, however, has acidic components that burns like motherbucker."

- Doc Holly

Type: Mutated Plant

EXP: 150

STR 5, PER 3, END 5, CHA 1, INT 2, AGI 5, LCK 5

Unarmed 40, **Melee** 60

HP 7, DT 0, AP 12, Size 0, Karma 0

Immunities none

Resistances Poison 40%, Radiation 60%

Weaknesses Fire (2x DMG)

Additional Combat Details:

Goo Spray (7 AP): Floaters spit out a foul-smelling, acidic goo (Melee, Range 10/20/30) dealing 1+(3) damage, and causing a Medium Distraction from the stench.

Latch (6 AP): Floaters latch onto their prey, and eat away the prey with their acidic goo and thorny "mouth". Deals 3+(1) damage. A latched Floater receives a +30 bonus to Unarmed attack rolls. The prey can do a Break Free action to escape.

Bloated: Upon death, Floaters explode in a Tiny Splash template, Small Splash template if killed with Fire, dealing 2+(2) damage.

Hovering: Floaters hover in the air, with a movement speed of 2 AP for 2 meters (1 Hex).

Creature drops:

- Green Herbs (1d4+Survival doubles u.)
- Floater Acid (1-2 vials)

Description:

It is not exactly clear from which plant the floaters mutated from - but it is clear that they're nasty plants nevertheless. While they are not very intelligent, they can be difficult to kill, especially if a group of them manages to surprise someone.

Floater like to roam around in groups, and can potentially be found almost anywhere where there is living bodies to use as fertile ground for their pollen. Thus they especially can be found near where molerats are abundant.

Gecko

"Geckos have a thick leathery hide, useful to craft leather armor from, but first you have to get the hide. This same thick skin gives them resistances against some kinds of magic and elements, making them relatively tough to fight. Also, some of the species' bite is though not toxic by itself, usually carrying enough disease and bacteria to infect one's wounds."

- Verdant Brink, Hunter.

Type: Mutated Animal

EXP: 50

STR 6, PER 4, END 4, CHA 3, INT 4, AGI 5, LCK 6

Sneak 55, Unarmed 45

HP 8, DT 0, AP 12, Size -1, Karma 0

Immunities *none*

Resistances Poison 20%, Radiation 25%, Electricity +3 DT, +1 END vs Stun

Weaknesses *none*

Additional Combat Details:

Bite (4 AP): Geckos use their powerful reptilian jaws to harm their prey. This attack deals 1+(3) damage.

Claws (3 AP): Geckos have Sharp claws at their feet, tearing through their prey. This attack deals 1+(1) damage.

Adhesive: Geckos are naturally gifted in moving about in difficult, rocky terrains.

Due to this, Geckos ignore the +1 AP to movement in Difficult terrain.

Creature drops:

Hide (1-2 pieces+Survival doubles u.)

Fire Gecko

"Simple thing about geckos is that they don't shoot back. Or at least it used to be. Who knew there would be a strain of geckos with a powerful firebreath to scorch through the last hide jacket. At least the new jacket is delightfully warm."

- Verdant Brink, Hunter.

Type: Mutated Animal

EXP: 80

STR 6, PER 4, END 5, CHA 3, INT 4, AGI 6, LCK 6

Melee 55, Sneak 55, Unarmed 60

HP 8, DT 1, AP 13, Size -1, Karma 0

Immunities none

Resistances Poison 35%, Radiation 20%, Fire +3 DT, +5 END vs Heat exposure

Weaknesses none

Additional Combat Details:

Bite (4 AP): Fire geckos use their powerful reptilian jaws to harm their prey. This attack deals 1+(3) damage.

Claws (3 AP): Fire geckos have Sharp claws at their feet, tearing through their prey. This attack deals 1+(1) damage.

Firebreath (1/min, 7 AP): Fire geckos have acquired a distinct ability of their distant cousins of dragons, the ability to breath fire (Melee, Range 4/8/12) through their mutation. Albeit this attack is somewhat short in distance, its flames deals considerable 2 + (4) damage and causes Burning Status effect with END to resist.

Adhesive: Geckos are naturally gifted in moving about in difficult, rocky terrains. Due to this, Geckos ignore the +1 AP to movement in Difficult terrain.

Creature drops:

Fire-Resistant Hide (1-2 pieces+ Survival doubles u.)

Golden Gecko

“While the last hide jacket kept one warm, it is the golden one that is every hunters’ dream. Large golden geckos are a result of immense radiation exposure, even leaking radiation everywhere they are. And their hides seem to make the finest of trophies.”

- Verdant Brink, Hunter.

Type: Mutated Animal

EXP: 100

STR 6, PER 6, END 5, CHA 3, INT 4, AGI 7, LCK 6

Melee 65, Sneak 75, Unarmed 65

HP 13, DT 2, AP 13, Size 0, Karma 0

Immunities none

Resistances Poison 30%, Radiation 80%

Weaknesses none

Additional Combat Details:

Irradiated attacks: Due to the extended exposure to radiation, Golden geckos ooze radiation onto their prey with contact. All attacks carry to give 1 Rad token at a chance of 2x40%.

Bite (4 AP): Golden geckos have more powerful jaws than their smaller counterparts. Their bite deals 2+(3) damage.

Claws (3 AP): Golden geckos carry longer and sharper claws, dealing greater damage of 2+(2) with them.

Spit (5 AP): Golden geckos produce thick and sticky saliva, that they spout out of their mouths. Geckos often target at their prey’s eyes, causing Medium Distraction to the target.

Adhesive: Geckos are naturally gifted in moving about in difficult, rocky terrains. Due to this, Geckos ignore the +1 AP to movement in Difficult terrain.

Creature drops:

Irradiated Hide (Irradiated Material 1d2+Survival doubles u.)

Description:

Geckos are mutated lizards, regularly hunted for their durable hides. Before the War, they tended to be much smaller than a pony. Nowadays the largest geckos can easily stand taller than a griffin.

Geckos have a characteristic pair of frills behind their head, which they fan out when they go for the attack. The gecko's eyes are strongly amber in hue, while the coloration of the hide depends on the subtype - normal ones being smokey gray or dark green, fire geckos' sporting a dark purple hide, and the golden gecko lives up to its name with its rich golden hue in the hide.

All geckos have sharp claws, and even sharper teeth, with which they'll strike against their prey or assailant. They charge or leap at their opponent, trying to snap onto any limb with their jaws, while not shying away from quick slashes with their claws to put down their enemy. Some sub-species of geckos have mutated with additional natural weapons at their disposal, utilizing them at first when in range.

While geckos apparently lack a hierarchical structure, they still communicate amongst the packs they often create - said packs found easily in warmest climates, and hardly none where winters are prominent. A series of squeaks, chirps or coos create their "language", easily being heard to a moderate distance away. However, the pack of geckos is very tight - attacking one gecko will incur the wrath of the entire pack, and they will seek out the attacker. Geckos fight over the same terrain as salamanders, and often the latter comes on top.

Ghost

"Quit it, Paladin, you're scaring the Initiates. There are no such things as Ghosts, that's ridiculous! What, souls of dead foals, walking around in some Pre-War Environmental hazard suits, spewing Pink Cloud? That's a folk story meant to keep the foals living near Route 52 from wandering off. Why do you look so shocked, Initiate?"

- Star Paladin Glitter Dust

Type: Abomination

EXP: 600

STR 7, PER 6, END 6, CHA 5, INT 4, AGI 7, LCK 3

Melee 70, Sneak 60, Unarmed 75

HP 8, DT 3, AP 13, Size -1, Karma 0

Immunities Poison, Radiation

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Rock: As Ghosts embody the spirits of foals, they're often not familiar with weaponry, using whatever improvised weapons they can find and use the stats according to the size of the improvised weapon.

Painless: Ghosts feel no pain, and as such, do not suffer from Pain Thresholds.

Self-Restoration: Ghosts regain HP each turn and even restore severed limbs. Ghosts gain 2 HP per turn, and restore any limb in a single turn, except head in two turns. If ghost is reduced to 0 HP without destruction of the talisman, it restores half of its HP and all limbs in a single turn, but is unable to move.

Pink Cloud Hazard: Piercing the ghost's suit releases the Pink Cloud inside the suit on a Tiny Splash Template for two rounds. Because Ghosts are technically tiny containers, the Pink Cloud is concentrated in higher doses; Staying in this area removes 1 HP token per round from the target. Should the Ghost Sprint or Charge, they'll leave behind a line of Pink Cloud for 2 turns.

Soul jar: Ghosts are animated resemblances of the pony long dead inside an environmental suit. As such, the suit which contains the bound soul, cannot be killed and it repairs any damage it suffers. However, destroying the talisman frees the bound soul, thus exempting the ghost to the afterlife.

Talisman: The Ghost can be freed into the afterlife by destroying the zebra talisman holding them together. Each attack made on the Ghost's torso is followed by a LCK -3 roll to see if the attack hit the talisman and destroyed it.

Creature drops:

None

Description:

While the term "Ghost" might make one think about ethereal, angry spirits hunting the mortal -which do, in fact, exist but rarely have as much effect as fiction would imply-, these ghosts only hold onto one common nominator with the ghosts seen in old mares' stories. They're definitely dead as dust.

Due to a unique feature -some would call this a glitch- of the P7 Mark VI life support suit's talisman that many foals were given when the bombs fell to shield them from radiation, the talisman instead made the foals into unliving creatures stuck in their suits. Most commonly known as Ghost Herd, this herd of unliving foals emerged a mere month after the bombs fell.

Extremely resilient to damage thanks to the Zebra talisman that binds their souls into the suit and repairs them, these poor creatures often went mad over their helpless quest to find their parents. Destroying this talisman frees the soul of the foal, allowing them the respite they've been due for 200 odd years.

In the span of 200 years, the Ghosts fell into obscurity, becoming little more than a legend. Thus, it is reasonable that should one come across a Ghost, it will be a sight to remember.

In battle, Ghosts are fairly simple as they are foals in mentality. Using whatever they have managed to pick up or find laying around to fend for themselves, they attack any living creature they come by, if they've been driven mad. Even the sane ones have poor understanding of morality or the harshness of the Wastes, not necessarily knowing what they're really doing.

Giant Ant

"Sooo.... The ant colony in Lab B... It kind of got a dousing of radiation, because the vents there malfunctioned. This means I have gotten the perfect spot to observe the effects! Apparently, they do grow in size, they're growing really fast too. Oh, one of them took a bite out of the concrete wall, how fascinating! Their biting power is tremendous. Oh. They've started to take the wall apart, to reach the outside. Huh. Should I activate the extermination protocols? I'm sure the spider-bots are still functioning."

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 50

STR 6, PER 5, END 6, CHA 3, INT 2, AGI 7, LCK 5

Sneak 60, Unarmed 60

HP 8, DT 1, AP 13, Size -1, Karma 0

Immunities none

Resistances none

Weaknesses none

Additional Combat Details:

Mandibles (8 AP): Giant Ants will try to bite and rip ponies legs off with force. This attack deals 2+(3) damage. The attack has 10% base chance of causing Crippled status, with each removed HP token adding 10% to this chance.

Formic Acid (1/min, 6 AP): Giant Ants can spray an acidic spit with a range of 4/8/12 on a Tiny Splash template. This attack deals 2+(2) of damage, and erodes Light, Heavy and Premium armor DT by 1 per each successful attack. If Item Condition rules are in effect, a successful attack can instead degrade condition by 1 in addition to its damage. A LCK roll determines if the item condition drops.

Territorial: Giant Ants will defend their nests ferociously and with great numbers.

Insect Brain: Crippling the Giant Ant's antennae causes the Ant to gain Mind Controlled and Enraged -status effects and make them attack the nearest creature, be it friend or foe.

Creature drops:

Ant Nectar (1-2+ Survival doubles u.)

Giant Ant Queen

"I just saw what became of the ant queen... she can barely fit in the room! Poor thing, she does look kind of anxious... no wait, that's anger. Well, thankfully this bulletproof glass will keep her away from me for a while. Where are those spider-bots at??"

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 100

STR 8, PER 5, END 7, CHA 3, INT 2, AGI 6, LCK 5

Sneak 40, Unarmed 70

HP 10, DT 3, AP 13, Size 2, Karma 0

Immunities none

Resistances none

Weaknesses none

Additional Combat Details:

Mandibles (8 AP): Giant Ant queens will try to bite and rip ponies legs off with force. This attack deals 4+(4) damage. The attack has 10% base chance of causing Crippled status, with each removed HP token adding 10% to this chance.

Formic Acid (1/min, 6 AP): Giant Ant queens can spray an acidic spit with a range of 8/16/24 on a Small Splash template. This attack deals 1+(2) of damage, and erodes Light, Heavy and Premium armor DT by 2. If Item Condition rules are in effect, a successful attack instead degrades condition by 1 in addition to its damage.

Trample (8 AP): Giant Ant Queen can charge at their foes, trampling them under their weight. Trample causes 3+(2) damage, as well as additional +(1) damage for each size category smaller than the Queen.

Sweep (6 AP): Fire Ant Queen can make a sweeping motion with its first pair of legs. This attack deals 2+(2) damage. This attack also provokes a Trip attempt, with +10 on the Opposed Unarmed or Melee roll for the Ant Queen.

Reach: Giant Ant Queens have a reach of 4 meters / 2 hexes.

Royal Guard: When the Ant Queen goes to Pain Thresholds, all Ants within the Queen's colony gain an Enraged -status effect.

Insect Brain: Crippling the Giant Ant queen's antennae causes the Ant to gain Mind Controlled and Enraged -status effects and make them attack the nearest creature, be it friend or foe.

Creature drops:

- Ant Nectar (1-2+Survival doubles u.)
- Ant Pheromones (1+Survival doubles u.)

Description:

Giant ants are one of the more common insects one can find in the Wastes, just behind radroaches. Dark in color and often travelling in bands of four or more, these insects camouflage well into their surroundings.

Much like regular, pin-sized ants, they often travel specific scent trails, and will attack anything that happened to get close enough. They use the scent trail to alert other giant ants and recruit more force to take down targets. Giant ants can carry several times their body weight, so it is not entirely uncommon to see a small group of giant ants carry off a brahmin corpse to their nest. Though giant ants can carry creatures big enough as ponies or brahmin, they usually hunt smaller prey; radroaches, geckoes, feral dogs, wood-rot wasps and radbits are more often on the giant ant's menu than ponies are. However, giant ants are aggressive and can attack a pony if they feel threatened.

When fighting, the giant ant can spray formic acid at their foe from a moderate distance, or grab onto them with their mandibles, that have enough bite force to break bones. However, they are not well-suited for grappling, as giant ant's mandibles are quite small in size, when compared to its cousin, the fire ant.

Giant ants build their nests in moist, dark places, and this nest is run by a queen. This queen is several times larger than her subjects, and rarely leaves the nest, unless the queen is new and is looking for a place to build a nest. During a time like this, a giant ant queen can be seen flying well above the treelines, matching the speed of an average pegasus. Queens that have already settled into a nest drop their wings.

Hellhound

"Hellhound, or as I like to call them 'Bucking Hellhounds!'. Armed with claws the size of your leg that tear through Power Armor like melted butter, teeth that will likely cut you in half and enough body weight to knock you around like a rag doll. And they don't like ponies. Or most things, actually, but ponies they hate with a burning passion. ...Can somepony tell Initiate Ironshell to stop staring at his leg?"

- Star Paladin Glitter Dust

Type: Abomination/Sentient

HP 18, **DT** 2, **AP** 14, **Size** 2, **Karma** varies

Immunities none

Resistances Poison 60%, Radiation 60%

Weaknesses High-pitched sounds (Major Distraction)

Additional Combat Details:

Wasteland Weaponry: Hellhounds can equip themselves with weaponry and armor. Any armor worn will add up to their listed DT of 2.

Long reach: Hellhounds have considerably long forelegs, giving their Melee and Unarmed attacks additional 2 meters (1 Hex) reach.

Rend (4 AP): The Hellhound's claws are sharp and capable of ripping apart metal and stone. The attack deals 4+(2) damage and ignores 4 DT.

Paw Slap (8 AP): Hellhounds can strike at their foe with their powerful paws, dealing 3+(2) damage, and knocking back their target by 4 meters (2 hexes) if the target fails an END-2 check.

Burrower: Hellhounds have powerful claws to dig through most terrains. They ignore movement penalty of +1 AP on difficult terrain and can avoid many obstacles.

Digger (3 AP): Hellhounds can dig underground and travel distances unharmed, and pop up from the ground like very deadly daisies. While underground, their movement AP cost is doubled. Getting back above ground again costs 3 AP.

Bipedal Warriors: As hellhounds can walk on their hind legs, they leave their forelegs free. As such, hellhounds can Switch, Ready, and Reload items and weapons with -1 AP cost.

Creature drops:

- Main Weapon (1)
- Additional Weapon (1-2, LCK doubles)
- Hellhound Paw (1d2)
- Healing Item (1d2, LCK doubles)

Description:

Hellhounds are without a doubt one of the most fearsome creatures in the Wasteland. They're mutated Diamond Dogs, sporting not only their intelligence but also sharpened claws - easily digging through dirt, rock and metal. These claws are their main weapon, though they do not shy away from scavenging any potential weaponry with destructive powers from their fallen enemies.

Hellhounds still remember how ponies treated them during the Great War, and have passed that hatred to their offspring down the years. Thus when it comes to anyone with equine appearance, Hellhounds consider them good when they're in a shallow grave.

Hellhounds typically form small, tight tribes, with alpha males at the head and the matriarch very close second. Both are respected in their communities, with the matriarch deciding many of the mundane survival, pup-rearing and education, while the alpha decides hunts and strategies.

Hospital Horror

"Probably the nastiest creature you will ever encounter, the most vile, singlehoofedly most repulsive creature you will ever lay your eyes upon, a taint-mutated pony. Their modus operandi is to attack, preferably a mare, and paralyze them. The worst thing is, they don't want to kill you. What they want is for you to become a vessel for- Oh fine, no gory details. My advice? Kill them fast."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 150

STR 6, PER 4, END 4, CHA 3, INT 4, AGI 6, LCK 6

Melee 50, Sneak 45, Unarmed 50

HP 10, DT 1, AP 11, Size 0, Karma 0

Immunities none

Resistances Poison 50%, Radiation 80%

Weaknesses none

Additional Combat Details:

Tight Grasp: Hospital Horror's mouth tentacles make these abominations superb at grappling their enemies, thus they gain +10 to all opposed rolls made to Grapple.

Paralyzing Stare (7 AP): Hospital Horror's eyes unleash a magical, spell-like reaction on anything it makes eye-contact with, stunning them. Target may try to resist locking eyes with the beast with a PER-2 roll, and a failed roll results in eye-contact. The target gets Stunned-status effect. Characters with sunglasses get no penalty on their PER roll. While the target is stunned, they may attempt an INT-2 roll to break out of their shock, once per turn.

Tentacle Slap (5 AP): Hospital Horror can attack with its tentacles (Melee, reach of 2 meters (1 Hex)). This attack deals 1+(5) damage, and might knock the target prone. Target may resist being knocked prone with an END check.

Sickening: When the Hospital Horror's flesh is cut, it emits a sickening, bitter stench from the wound, giving everyone within Small Splash template centered on it 1x50% chance of being poisoned. This poison causes -1 SPECIAL damage to a randomly selected SPECIAL.

Creature drops:

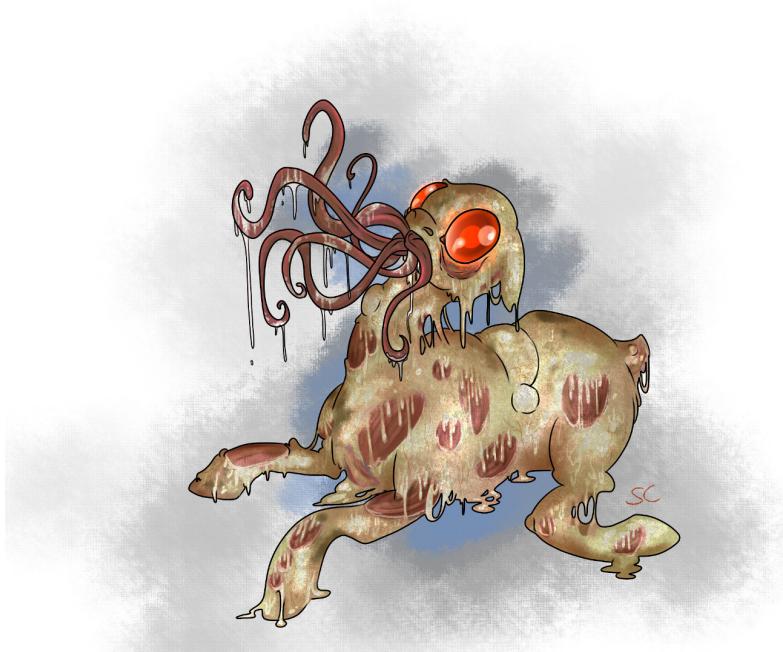

- Abomination Flesh piece (1-2, Survival doubles u.)
- Martial Component (1d4 u. Survival doubles u.)

Description:

Hospital Horrors are horrifyingly mutated ponies, being one of the worst result one can experience when exposed to Taint. Now pale-skinned with gazing red eyes, it barely resembles a pony as it crawls across surfaces. The most striking feature that makes it stand out is the various tentacle-like appendages sprouting from its muzzle, swaying and latching at random.

Hospital Horrors are often found, as their name implies, in abandoned medical centers of various kinds. What makes them to seek out these places is unknown, though it may be the small hint of sentience left in the pony to seek help.

When Hospital Horrors see their prey, they first try to get a direct line of sight to them to use their horrifying and paralyzing gaze upon them before closing in to grasp the now-helpless creature with their tentacles. They often try to single out potential targets from a group, only attempting entire group directly when there's an overwhelming numbers of them.

Hydra

"For a creature of such stature, this scaly beast moves quite quickly through the wet marshes it calls a home. Thankfully, its several lizard-like heads rarely agree on anything, which may aid you in your escape..."

- Verdant Brink, Hunter

Type: Non-Mutated Animal

EXP: 400

STR 7, PER 8, END 8, CHA 3, INT 4, AGI 8, LCK 5
Melee 40, Sneak 60, Unarmed 80

HP 18, DT 2, AP 10[†], Size 3, Karma -50

Immunities Radiation

Resistances Poison 40%

Weaknesses Cold (2x DMG)

Additional Combat Details:

Venomous Spit (5 AP): Hydra salivates a thick and venomous spit (Melee, Range 10/20/30), that will cause 2+(5) damage. If any damage pierces the DT, the target has a chance to get poisoned with 2x50% chance. When poisoned, the target suffers a -2 to a random SPECIAL and no longer recovers Strain.

Skull Bash (4 AP): Hydra slams one of its head down, potentially cracking its opponent to pieces. This attack will cause 2+(3) damage, and has a reach of 4 meters / 2 hexes. This attack has a 10 % base Cripple chance when making Called Shots. If this attack misses and the head bashes against the ground, the head in question takes 1 HP damage and gets stunned.

Swallow Whole (7 AP): Due to its size, the hydra can easily swallow a pony whole. If the Hydra wins an opposed roll of the Hydra's STR against the target's AGI, the target is swallowed whole. Allies then have 3 turns to try and cut the corresponding head to get the target out.

Noxious Odors (6 AP): The Hydra emits a foul stench, causing anyone within Large Splash template from it to suffer a poisoning with 2x50% chance. When poisoned, the target suffers a -2 to a random SPECIAL and no longer recovers Strain. Antivenom cures this effect.

[†]**Multiple Heads:** Hydra grows two more heads as one has been Crippled, giving the creature more sources to attack with; the hydra's AP is 10 + the number of

heads it has. New heads spring out on the Hydra's next turn after Crippling blow. A hydra ignores any Crippled head penalties it gains, and it ignores any damage done to its heads. However, it loses 1 HP whenever a head is Crippled.

Creature drops:

- Teeth (1d10+Survival doubles u.)
- Hydra Scales (1d6+Survival doubles u.)
- Junk (1d6)
- Random Weapon or Armor in poor condition (1)

Description:

Hydra is a large and relatively intelligent mythological creature that is, for the relief of many Wastelanders, quite a rare sight. Opting for wet marshes and wetlands, this creature can hide under the murky swamp waters, awaiting prey to pass by.

Mean-spirited and definitely one to laugh at misfortune, this creature's many heads can rarely agree on anything, and tend to argue amongst themselves. However, should they manage to catch their victim, they can swallow them whole, granted the victim is smaller than the Hydra.

The hydra's heads can regenerate when cut, opting for two new heads to pop in their place. In addition, their body odor leaves much to be desired, as they tend to emit a foul stench. Their scaly body is also quite sturdy, able to withstand attacks.

However, their reptilian bodies also prove their greatest weakness as cold climate and weaponry can render the hydra stiff and sluggish, quickly leading to its demise. Due to this, they are more commonly found in the southern regions of the Equestrian Wasteland. To counter the cold-generating weaponry ponies have developed, the hydra has a poisonous spit that seeps through by skin contact.

Though hydra do not seem to be as magical as say, timberwolves, they do resist the effects of magical radiation, having kept them largely the same over the two centuries. Many have attempted to find the reason for this, as it is not immediately apparent, evidence seems to point to their highly developed liver filtering out both toxins and radiation.

Jackalope

"Have you ever sat by the fire in the wild and heard a quiet, ghostly whisper, someone asking for help? Or heard singing in a voice that doesn't belong to any of your friends? Then you have heard the Jackalope on prowl. Capable mimicry and a bit of magic are this mythical creature's arsenal when it looks for prey. If the herd is big enough, not even ponies are safe."

- Verdant Brink, Hunter

Type: Non-Mutated Animal

EXP: 150

STR 5, PER 6, END 4, CHA 7, INT 6, AGI 8, LCK 4

Diplomacy 40, Sneak 70, Thaumaturgy 70, Unarmed 65

HP 7, DT 0, AP 14, Size -2, Karma 0

Potency 10, Strain 15

Immunities *none*

Resistances Poison 40%, Radiation 90%

Weaknesses *none*

Additional Combat Details:

Mimicry (4 AP): Jackalopes are not truly capable of speech, but they can mimic sounds that other creatures make, including words they've heard from ponies. Some Jackalopes can even learn entire sentences, and use this to lure potential prey to them by pleading for help. In combat, they can use this skill to distract, causing Minor distraction to all who hear it.

Gore (5 AP): When the prey has strayed close enough, the Jackalope bounce on it, attempting to pierce the creature with their deer-like horns. This attack deals $3+(2)$ damage, and can cause a Bleeding-status effect.

Magical: Jackalopes are capable of some small amount of magic, with Enchantment-Magic school being available to them.

Swarm: Jackalopes appear in large groups, engulfing a Small Splash template. Due to their large numbers, Jackalopes gain a +5 to Unarmed when making Attack of Opportunity attacks.

Creature drops:

- Fresh Jackalope Horn (2)
- Fur Pelt (1-2 pieces, Survival doubles u.)

Al-Mi'raj

"Al-Mi'Raj or just Miraj, is a rather strange entity. Closely related to Jackalopes, yet they're not mutants. Some theorize it might just be a genetic fluke that a Jackalope gives birth to a Miraj. They're bigger than Jackalopes and instead of deer horns, they have a black unicorn horn. Most commonly, Miraj seem to take natural leadership in a Jackalope herd. They're more ferocious and more magically inclined than regular Jackalopes, so stay sharp."

- Verdant Brink, Hunter

Type: Non-Mutated Animal

HP 10, DT 1, AP 14, Size -2, Karma 0

Potency 14, Strain 20

Immunities none

Resistances Poison 60%, Radiation 90%

Weaknesses none

Additional Combat Details:

Advanced Mimicry (5 AP): Al-Mi'raj are not truly capable of speech, but they can mimic sounds that other creatures make, including words they've heard from ponies. Miraj can even learn entire sentences, and use this to lure potential prey to them by pleading for help. In combat, they can use this skill to distract, causing Medium distraction to all who hear it.

Gore (5 AP): When the prey has strayed close enough, the Miraj bounces on it, attempting to pierce the creature with their unicorn-like horns. This attack deals 3+(3) damage, and can cause a Bleeding-status effect.

Fearless: Al-Mi'raj are fierce hunters, willing to attack targets way bigger than themselves. Due to this, they cannot be intimidated into backing down, though they can still run from a fight not in their favor.

Harelord: Due to the Miraj often rising up to lead the herds of Jackalopes, they seem to also help their allies do better. Any Jackalopes within 20 m (10 hex) of the Miraj get +10 to their Magical Opposed Rolls.

Magical: Much like Jackalopes, Miraj are capable of magic, with Conjunction (with the exception of Friendly Critter's help -spell, as most other creatures run at the sight of Miraj) and Enchantment- Magic school being available to them.

Creature drops:

- Fresh Jackalope Horn (1)
- Fur Pelt (2-3 pieces, Survival doubles u.)
- Jackalope paw (1d4)

Description:

Jackalopes and their larger, more aggressive variant, Al-Miraj, are horned rabbits; Jackalopes with deer horns and Al-Mi'raj with spiraling unicorn horn. What sets them apart from Radbits is their affinity to weave spells from the same energy Unicorns harness theirs, and their intelligent behavior. Both Jackalopes and Al-Mi'raj are able to employ tactics and are known to attack as an efficient group.

Most Jackalope colonies consist of Jackalopes exclusively, but every once in a while an Al-Mi'raj is born. This Al-Mi'raj will quickly gain leadership of the herd due to their superior intellect and magical prowess. Jackalope and Al-Mi'raj have an ability to mimic sounds, though they do not actually speak, even if they are capable of, to some extent, figure out cause and effect of certain words to lure prey.

Both variants are cunning and aggressive, swarming their target en-masse from all sides if their spells prove inefficient. They could also be considered dirty fighters, as they tend to use every advantage they can have to their benefit and spare not even the most horrifying of spells if it assures them a meal. It should be noted, that though ferocious, Jackalopes rarely kill without need. Though particularly intelligent individuals can seem almost sadistic when they kill.

Al-Mi'raj are particularly fierce hunters, rarely backing out of a fight unless it proves to soon turn fatal for them. Unlike rabbits, Jackalopes are entirely carnivorous creatures.

Colonies are usually large, and exhibit many behaviors that a regular rabbit does; burrows are used for nests, and with strict hierarchy. These burrows are often fiercely guarded from predators, with spells finding their target long before one sees the long-ears of the Jackalope. Blood and gore often mars the entries of these burrows, likely as a warning sign to predators of things to come.

Manticore

"Manticores are large creatures that seem to prefer forests as their habitat. They have the head and body of a lion, wings of a bat and the tail of a scorpion. Aggressive, strong and venomous, they will charge at any creature smaller than it. Besides this, it seems to be capable of some tactical ability, able to try and separate larger groups for easier targets and smaller threats."

- Verdant Brink, hunter

Type: Non-Mutated Animal

EXP: 350

STR 8, **PER** 5, **END** 6, **CHA** 4, **INT** 6, **AGI** 5, **LCK** 6

Melee 80, **Sneak** 60, **Unarmed** 70

HP 16, **DT** 3, **AP** 12, **Size** 1, **Karma** 0

Immunities Radiation, Taint

Resistances Poison 50%

Weaknesses none

Additional Combat Details:

Bite (6 AP): Manticore's jaws are strong enough to crack bones. This attack deals $4+(3)$ damage, and has a 20% base chance of Crippling the limb it bites.

Swipe (7 AP): Manticore can swipe at their targets with their massive paws. This attack deals $2+(3)$ damage, and can knock the target prone. This can be resisted with an Opposed STR roll.

Stinger (6 AP): The manticore's stinger contains a potent venom that slows down its victim, numbing their limbs. The attack deals $1+(4)$ damage, and has a 2x50% chance of poisoning the target. If poisoned, the target's movement actions cost +2 AP extra.

Flying: Manticore have working wings, though they are rather poor fliers, due to preferring thick forests over open plains. Their flight speed is 2 meters (1 Hex) for 2 AP.

Creature drops:

- Manticore Venom Sac (1)
- Manticore Paw (1d4)
- Manticore Stinger (1)

Description:

Manticores are large mythical beasts with the face, poofy mane and body of a lion, the tail of a scorpion and a pair of leathery wings. Easily an apex predator of any area they claim for themselves, there are only a few creatures that actively hunt Manticores. Though they are not usually aggressive enough to attack on sight, male manticores have been known to attack creatures that end up in their turf during mating season. The females turn aggressive when they have cubs to protect.

If threatened, Manticores will defend its domain with the fury of an angered lion. They swoop down on their target, attempting to poison them with their stinger before landing on the ground. If forced to fight in the air, they resort to their strong claws instead to knock their enemy down to the ground first.

Manticores are - somehow - immune to the effects of radiation, having survived through the years without any mutations.

Like previously stated, Manticores are carnivores. Their strong jaws are large enough to generate enough force to shatter bones. Thus they don't leave any carcass behind that would attract unwanted attention to their turf. As territorial creatures, the Manticores' lair can be recognized by the stomach-churning stench of musk, often compared to the smell of rotting eggs. The manticore's lair is usually located in a tree or a ledge, where it can easily see around for a considerable distance and where their offspring are safe.

Mercenary

"Mercenaries, you like them when they're on your side, and you loathe them when they're working against you. Thankfully, caps are a great way of convincing a mercenary that their current employer is actually a crook and a miser, and how they're clearly off better working for you. This doesn't always work though, as some mercenaries have bothered to cook up a code for themselves, and you get your arse salted for trying."

- Merchant Silver Bit

Type: Sentient

EXP: 200

STR 7, PER 6, END 5, CHA 5, INT 6, AGI 6, LCK 5

Barter 60, **Explosives** 45, **Firearms** 70, **MEWs** 70, **Thaumaturgy** 60

HP 15, **DT** 0, **AP** 13, **Size** varies, **Karma** varies

Potency 12, **Strain** 15

Immunities none

Resistances Poison 10% (20% if zebra), Radiation 5%

Weaknesses none

Additional Combat Details:

Wasteland Weaponry: Mercenaries can carry just about any weapon and armor imaginable, and usually prefer bigger and heavier hitting guns and heavy armor.

Mercenary Magic Though mercenaries are most commonly griffons often called Talons, a few ponies and zebras have been known to pick up the trade. Thus, magic is an asset to them.

- Earth Ponies: Branch of Sight or Might
 - Pegasi and Griffons: All Maneuvers
 - Unicorn: General, Enchantment and Medical Magic Schools
 - Zebra: Alchemical Medicine and Talismans, Shaman; Possession Spirits or Spirit of Machines or Spirit of Serenity
-

Greedy: Mercenaries work for the highest paying clients, and thus, striking a deal better than their current assignment can turn their heads to look a way.

Organized: Mercenaries have hierarchy of leadership. They strike as units and groups of various sizes, usually under at least one commander. Eliminating such commander often leaves rest of the team at disarray and demoralized.

Creature drops:

- Main Weapon (1)
- Additional Weapon (1d2)
- Armor or Clothing (1)
- Healing item (1d2, LCK doubles u.)
- Caps (50-100 caps, LCK doubles u.)

Description:

Mercenaries are the paid guardsponies of the wastes, putting their life on the line to protect their employer's belongings and life. So long as the payment for the job lines up with the risks about to be taken.

Sometimes mercenaries band together, forming their own little factions. Be it Talon Company or some band of misfits, all mercenaries have one thought above anything else: caps. Some mercenary groups put their morals aside for the payment - even selling out their employers if the caps so say, while others keep themselves in line and stick to the contract. Before dealing with such large groups - or even individuals - it is best to check where their loyalty stands.

Mercenaries can be found almost anywhere in the wastes, but they most often linger close to where the payment can be easily achieved. These are large settlements, or potentially dangerous stretches of the road. Some large groups may even build their own little fortresses to house their operations at.

Mister Hoofy

"Ah, Mister Hoofy - the pre-War robot butler for cleaning house and cooking meals. It is a shame that more often than not these convenient functions are used to violent actions by the robot. Possibly something going wrong with the magi-flux processor and thus their artificial intelligence. Still, I wonder who's idea was to install a buzzsaw on it?"

- Scribe Star Twinkle

Type: Machine

EXP: 150

STR 6, PER 5, END 5, CHA 3, INT 6, AGI 4, LCK 3

Barter 40, Diplomacy 50, Melee 50, MEWs 60

HP 8, DT 3, AP 12, Size 0, Karma 0

Immunities Radiation, Taint, Pain Thresholds

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Buzzsaw (5 AP): Though Mister Hoofies are not designed with combat in mind, they will still engage a threat with a buzzsaw that some genius installed on it. This attack will deal 4+(3) damage.

Flamethrower (7 AP): Once meant to be used for household cooking, Mister Hoofy can spray nearly endless supply of flaming liquid from their bowels. This attack deals 1+(5) damage, in a line up to ranges of 6/12/18, and causes Burning Status effect

Self-destruct: Upon reaching 0 HP, Mister Hoofy explodes with a Small Splash template centered on itself. Deals 2+(2) damage, and causes Burning Status effect.

Hovering: Mister Hoofy hover in the air with a built-in compact jet engine, with a movement speed of 2 AP for 2 meters (1 Hexes).

Combat Inhibitor: Mister Hoofy is equipped with a combat inhibitor, that help it separate friends from foes. Combat inhibitor can be hacked with Science to various ends, such as shutting down the Mister Hoofy. Destroying the combat inhibitor turns Mister Hoofy against anything around them.

Creature drops:

- Scrap Metal (1d4, Mechanics doubles u.)
- Scrap ArcanoTech (1d2, Science doubles u.)
- Flamer Fuel (1d4, Mechanics/Science doubles u.)
- Martial Component (1d4 u.)
- Bonesaw (1)
- Junk (1d4)

Sir Gallant

“Some high ranking officer in the Equestrian army must have seen Mister Hoofy as a potential weapon - as these robots are a highly weaponized and patriotic version of Mister Hoofy. If you’re lucky to get your hooves on the combat inhibitor and modify its routines, you might get a potential ally. The problem is, they often see everypony as a traitor and zebra sympathizer.”

- Scribe Star Twinkle

Immunities Radiation, Taint, Pain Thresholds

Resistances none

Weaknesses none

Additional Combat Details:

Incinerator (7 AP): For more combat and room clearing capabilities, Sir Gallants can spray nearly endless supply of flaming liquid from their bowels. This attack deals 2+(5) damage up to ranges of 30/60/90, and causes Burning Status effect.

Plasma Pistol (4 AP): Equipped for combat for longer ranges, Sir Gallants have a build in plasma pistol in their arms. This attack deals 2+(3) with DT reduction of 1 and ranges of 20/40/60.

Ripper (5 AP): Unlike their more docile models of Mister Hoofies, Sir Gallants have a ripper, a much stronger “buzzsaw”. This attack will deal 4+(3) damage and ignores 2 DT.

Self-destruct: Upon reaching 0 HP, Sir Gallant explodes with a Small Splash template centered on itself. Deals 2+(5) damage, and causes Burning Status effect.

Hovering: Sir Gallants hover in the air with a built-in compact jet engine, with a movement speed of 1 AP for 4 meters (2 Hexes).

Combat Inhibitor: Sir Gallant is equipped with a combat inhibitor, that help it separate friends from foes. Combat inhibitor can be hacked with Science to various ends, such as shutting down the Sir Gallant. Destroying the combat inhibitor turns Sir Gallant against anything around them.

Creature drops

- Scrap Metal, Rare (1d4, Mechanics doubles u.)
- Scrap ArcanoTech, Rare (1d4, Science doubles u.)
- Flamer Fuel (1d4, Mechanics/Science doubles u.)
- Ripper; Melee weapon (1, Mechanics roll required)
- Plasma Pistol (1, Mechanics roll required)
- Ammo, MFC (1d6, Science doubles u.)

Description:

Mister Hoofies are utility robots with advanced artificial intelligence, created by Robronco to serve as robotic servants in the households. With this in mind, Mister Hoofies possess a few robotic claws to lift and move items, as well as two special extended arms - one with a circular buzzsaw, and the other with a smaller version of a flamethrower. While originally added to the robot as a help in the kitchen, it can - and will - use the special arms to combat “intruders”.

Their militarized version, Sir Gallant, packs a heavier punch and armor than its civilian counterpart. In addition to the buzzsaw and flamethrower - this time applied with combat in mind for the Equestrian Armed Forces - it packs a more accurate ranged weapon alongside the flamer, a plasma pistol. With these additions and combat preference in mind, Sir Gallant’s behaviour and mannerisms are more patriotic and military-oriented, easily marking anyone who crosses it as a “traitor”.

Both Mister Hoofies and Sir Gallants usually roam the areas of their previous owners, doing their usual tasks like before the Great War. Some have, in time, gone haywire and began wandering the wasteland aimlessly, attacking without provocation. Most that have retained their artificial intelligence have moved on with their lives, like ponies themselves, easily found in settlements as helpers and assistants.

Molerat

"Molerats are -unlike their name implies- rats mutated by magical radiation. Though they defend themselves and their nests from any approaching force with vigor, they can also be tamed and kept as pets. Some would even say they look kind of cute. Do be wary of their bite, as it tends to carry diseases and infections."

- Verdant Brink, Hunter

Type: Mutated Animal

EXP: 50

STR 5, PER 4, END 4, CHA 4, INT 4, AGI 6, LCK 5

Sneak 35, Unarmed 40

HP 6, DT 0, AP 11, Size -1, Karma 0

Immunities none

Resistances Poison 40%, Radiation 10%

Weaknesses none

Additional Combat Details:

Bite (3 AP): Molerats tend to bite until their teeth hit each other, dealing $1+(2)$ damage and ignores 1 DT.

Burrower: Molerats have powerful fangs and claws to dig through most terrains. They ignore movement penalty of +1 AP on difficult terrain and can avoid many obstacles.

Quick Runner: Molerats are fast, and due to this they get a +2 to their Initiative rolls.

Underground Ambusher: Molerats strike at their prey with surprise tactics by popping out of the ground. They receive +20 bonus to Sneak when underground.

Darkvision: Molerats have keen eyesight for darkness, and they ignore PER penalties at Dim Light and Darkness. However, Bright light renders them blind.

Creature drops:

- Molerat Meat (1d4, Survival doubles u.)
- Tail (1)
- Hide (1, Survival doubles u.)
- Junk (1d4)

Description:

Molerats are giant, hairless rodents that burrow underground and make their nests in small caves. They utilize their sharp claws and even sharper bite to create these burrows of theirs - and to defend it from anyone disturbing it. With mutations provided by radiation, they've grown larger and more vicious.

With the ability to burrow, they use this to their advantage - closing in on their target underground and then climbing up at their target, provided they note the vibrations of their steps.

With the tendency to live in caves created by themselves, molerats can be found anywhere with sturdy enough soil to dig through. They don't shy away from making nests in old buildings either, as it saves digging time while providing superb shelter.

Moss Shambler

“Natural enemy of the Spore Carrier but also preferring living creatures as its means of reproduce, this plant -technically a fungus- infects grains that ponies eat, and begins to gestate and spread inside the pony’s digestive tract. Eventually the pony dies of high fever and weakness caused by this fungus, after which the corpse is taken over by the fuzzy mold-like fungus, becoming a shambling, bloated and strangely soft creature preying on ponies and their crops.”

- Doc Holly

Type: Mutated Plant

EXP: 50

STR 5, PER 4, END 5, CHA 3, INT 1, AGI 6, LCK 4

Sneak 40, Unarmed 45

HP 12, DT 0, AP 13, Size 0, Karma 0

Immunities none

Resistances Poison 20%, Radiation 50%

Weaknesses Cold (2x DMG), Fire (2x DMG)

Additional Combat Details:

Bite (3 AP): Moss Shamblers have sharp thorns and they even extrude acid upon their victims to further breach through the protection. This attack deals 1+(2) damage and ignores 2 DT.

Mycelium: Moss Shamblers grow vine-like mycelium from their bodies, that latch onto their prey. They gain +20 to grappling actions and their Grapple actions cost -1 AP less.

Sickening: When the Moss Shambler’s flesh is cut, it emits a sickening, bitter stench from the wound, giving everyone within Small Splash template centered on it 1x50% chance of being poisoned. This poison causes -1 SPECIAL damage to a randomly selected SPECIAL.

Bloated: Upon death, Moss Shamblers explode releasing a cloud of poisonous pollen on a Small Splash template, with a 2x40% chance to cause a poisonous effect. If the pollen is inhaled, the target will suffer a -1 to both END and AGI until the pollen is removed from the system, via Clean-spell or by visiting a doctor. If left untreated, both END and AGI continue to drop by 1 each day. If a target’s END reaches 0 due to the pollen, they perish and are turned into a Moss Shambler within a week.

Creature drops:

- Scrap Chemicals, common (1d6, Survival doubles u.)
- Thorn (1d6, Survival doubles u.)
- Pollen (1 vial, Survival doubles u.)
- Strange Meat, Rotten (1d4 u.)

Black Fungus Shambler

"This variant is especially common in Everfree, and though it is considered a relative to the Moss shambler, the Black fungus does function a bit differently. Instead of overpowering and consuming a pony and taking just their form, Black fungus can take the form of any creature it has consumed, ever. It uses this to chase down their current victim. When it is not hunting, it will take the form of regular moss growing on trees."

- Doc Holly

Type: Mutated Plant

EXP: 200

STR 5, PER 5, END 4, CHA 4, INT 2, AGI 8, LCK 4

Sneak 80, Unarmed 70

HP 16, DT 2, AP 14, Size Varies, Karma 0

Immunities none

Resistances Poison 30%, Radiation 60%

Weaknesses Fire (2x DMG)

Additional Combat Details:

Bite (3 AP): Black Fungus Shambler have sharp thorns and they even extrude acid upon their victims to further breach through the protection. This attack deals 3+(3) damage and ignores 2 DT.

Sickening: When the Moss Shambler's flesh is cut, it emits a sickening, bitter stench from the wound, giving everyone within Small Splash template centered on it 1x50% chance of being poisoned. This poison causes -1 SPECIAL damage to a randomly selected SPECIAL.

Bloated: Upon death, Black Fungus Shamblers explode releasing a cloud of poisonous pollen on a Small Splash template, with a 2x40 % chance to cause a poisonous effect. If the pollen is inhaled, the target will suffer a -1 to both END and AGI until the pollen is removed from the system, via Clean-spell or by visiting a doctor. If left untreated, both END and AGI continue to drop by 1 each day. If a target's END reaches 0 due to the pollen, they are turned into a Black Fungus Shambler.

Shapeshift (3 AP): Black Fungus can change its shape into other creatures it has consumed in the past, gaining their abilities but not their stats. They cannot cast magic, even if the creature consumed could.

Creature drops:

- Scrap Chemicals, rare (1d2, Survival doubles u.)
- General Meat (1d4, Survival doubles u.)
- Pollen (1d4, Survival doubles u.)
- Herb, Black (1d4+1)

Description:

Moss Shambler begins its life-cycle as spores that infect hay and grain that equines eat. Once the spores reach the equine's stomach and intestines, it begins to grow, causing abdominal pain and general weakness of limbs. As the spores grow, the pony grows weaker and feeble, until they eventually die. After this, the spores take over their host's corpse, slowly pushing through the decaying flesh to form a fluffy mold fleece on the body.

Being plants, Moss Shamblers aren't the brightest in the world, acting on mere instincts. They attack any potential threat - or victim - with all they have, not stopping until either side has died or fled. And the Moss Shambler doesn't retreat. Likewise, the Moss Shambler doesn't have much goals in life; they seek only to infect ponies or grain, keeping the vicious cycle going. After releasing their spores onto the victim or the potential victim's hay, the Moss Shambler withers away, leaving behind little more than rotting pieces of flesh and bone. Due to the method they use to reproduce, a single Moss Shambler can cause untold destruction to entire settlements unless caught quickly.

Moss Shamblers prefer humid areas when in the corpse-possessing state, keeping itself hydrated as it seeks a target to infect. It steers away from extreme temperatures, often seeking some sort of shelter if such falls upon it - thus one can find Moss Shamblers hidden away in somewhat intact ruins amidst freezing winter or scorching summers.

Black Fungus Shamblers are related to the Moss Shambler, though they are drastically different in behavior and hunting method; unlike Moss Shambler, the Black Fungus Shambler doesn't infect ponies, but lays dormant on trees, waiting for a creature to pass by. They then spring into action, chasing down the creature and engulfing them in the fungus, devouring the creature in seconds. The fungus can copy the creature's form and abilities, to better catch prey. There is nary a limit on the size the Black Fungus Shambler can engulf.

After the Black Fungus Shambler has finished its dinner, it will retreat back onto the tree and begin to lay dormant until a new creature wanders too close.

Myling

“As far as we’ve been able to tell, this is what happens when a Changeling manages to dive head-first into Taint, resulting in a dangerously agile... uh... bug pony. More bug than pony, really. The Myling drones, that serve their Queen aggressively, are fast, angry and willing to sting you several times with extreme prejudice. Their sting is quite capable of rendering you useless, Initiate, so don’t run around trying to shoot them. You’ll just make them angry.”

- Star Paladin Glitter Dust

Type: Abomination

EXP: 200

STR 5, PER 5, END 6, CHA 7, INT 5, AGI 8, LCK 3

Sneak 60, Unarmed 70

HP 10, DT 2, AP 13, Size 0, Karma 0

Immunities none

Resistances Poison 60%, Radiation 40%

Weaknesses none

Additional Combat Details:

Stinger (3 AP): Myling sting is potent and dangerous with their natural toxins. This attack deals $2+(3)$ damage and can Stun the target. This attack ignores 2 DT.

Fearless: Mylings are fierce hunters, willing to attack targets way bigger than themselves. Due to this, they cannot be intimidated into backing down, though they can still flee from a fight not in their favor.

Flying: Mylings have working wings, though they are rather short distance spurters, due to preferring cover of dark undergrounds over open plains. Their flight speed is 4 meters (2 Hex) for 1 AP.

Slow: Mylings in their untransformed state are weak runners, only moving at a pace of a of 2 meters (1 Hex) for 2 AP.

Myling Transform (4 AP): Though they rarely use this skill for combat, they can change shape into other creatures of -1 to 1 in size. However, the mylings’ abomination nature has rendered the disguises to look sickly. Characters can spot myling disguise with PER -2 check.

Quick Flier: Mylings are fast fliers, and due to this they get a +2 to their Initiative rolls.

Creature drops:

- Myling Chitin Piece (1-2, Survival doubles u.)
- Myling Poison Gland (1)
- Abomination Flesh Piece (1d2, Survival doubles u.)
- Scrap Leather, common (1d4)

Myling Queen

"The Myling Queen, unlike its unmutated brethren the changeling queen, is pretty much an immobile baby machine the size of a double-decker bus. She is the source of the Myling infestation in the area. Stay on guard, once Changeling Queens take the fateful dip into Taint, they don't leave the area..."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 500

STR 5, PER 5, END 6, CHA 8, INT 7, AGI 3, LCK 5

Melee 70, Sneak 10, Unarmed 65

HP 15, DT 5, AP 11, Size 2, Karma 0

Immunities none

Resistances Poison 90%, Radiation 65%

Weaknesses none

Additional Combat Details:

Bile (6 AP, Melee): Myling queens are still a threat despite being unable to chase you- They spit out acidic bile from their mouths. This attack has a range of 10/20/30, deals 2+(5) damage in a Small Splash template. This attack ignores 2 DT. This damage does **not** follow the rules for Explosives.

Squash (8 AP): At close range, Myling Queens can move their enormous bodies to squash targets near them. The squash deals 4+(4) damage, plus additional (1) for each size category that their target is smaller than them (Size 0 pony takes +(2)). Targets smaller than the Queen must make an AGI or STR check, or be Pinned Down under the Myling Queen.

Broodmother (8 AP, 1/min): Myling queens produce eggs near constantly, and they can use this to their advantage. Myling queen can hatch 1d4 eggs per minute, and those eggs will hatch on the queen's next turn. An egg has 6 HP and 0 DT until hatching a myling drone to defend the queen. Destroying the egg before it hatches will kill the myling inside it.

Near Immobility: Myling Queen's legs have nearly ceased all movement under their enormously heavy body. Myling Queens move at a pace of 2 meters (1 Hex) for 3 AP.

Flying: Mylings Queens have working wings, though their heavy bodies prevent them from flying fast. Their flight speed is 2 meters (1 Hex) for 2 AP.

Creature drops:

- Myling Chitin Piece (2d4, Survival doubles u.)
- Myling Poison Gland (1)
- Abomination Flesh Piece (3d4, Survival doubles u.)
- Myling Egg (1d4, Survival doubles u.)
- Scrap Chemicals, rare (1d4)

Description:

Mylings are most commonly found in areas with prominent amount of Taint, as the queen's mutations have rendered them immobile. While the queen and a selected few myling drones tend to the multiple eggs the queen lays in the span of few days, the rest of the drones spread out in look for prey.

Myling Drones are about the size of a pony, and can disguise themselves like their unmutilated kin, to throw off suspicion and lure in prey, which is sentient creatures. Once the prey has wandered close enough, the drones attack in a group of 3-4, stinging the prey until they fall to the ground, paralyzed by the myling's toxins. The myling drones then proceed to drag the paralyzed but conscious body back to their nest and encase the body in a transparent, green cocoon.

These cocoons' chemical compounds pacify the prey inside and allow for the cocoon to produce the prey's emotions and life energy into a food source for the myling. Once the sentient creature has been sucked dry, which can take up to a month, the cocoon is split open and the empty, mummified husk falls off to the ground. It is not known if mylings make an effort to remove these husks from their nest. Despite this, myling presence is difficult to detect by smell, as the husks are noticeably more odorless than rotting carcasses.

Myling hives are the easiest to recognize from the faint green glow of the cocoons, which often litter the place entirely, with most dense concentration of cocoons near the queen's lair.

Mylings, due to their close proximity with Taint, can sometimes form symbiotic relationships with other abominations, using them as "attack dogs" and guardians to the hive. Though it should be mentioned that Hospital Horrors they attack on sight, likely due to rivalry in prey.

Possessed Shaman/Angry Spirit

"It's not a problem we often encounter, or maybe we just don't realize it, but occasionally a shaman's spiritual summoning goes awry. And the spirit goes on a rampage. Which is a bit bad for the shaman, who is usually stuck in being collateral damage and the unfortunate recipient of bullets. I really don't like shooting at potential customers."

- Merchant Silver Bit

Type: Abomination/Sentient

EXP: 100

STR 7, PER 6, END 6, CHA 8, INT 6, AGI 4, LCK 3

Melee 50, Sneak 40, Unarmed 50, Thaumaturgy 45

HP 8, DT 0, AP 12, Size 0, Karma 0

Potency 5, Strain 15

Immunities none

Resistances Poison 20%, Radiation 5%

Weaknesses none

Additional Combat Details:

Bite (3 AP): Despite possessing sentient creatures, the spirits that have successfully taken over their shaman tend to be in a state of anger which keeps them from using sophisticated weaponry. Their host's bite deals 1+(3) damage, with a Critical success giving a chance to cause Bleeding.

Nefarious Spirit: Angry Spirits are creatures that have overtaken their host, streaming out of their back barely visible. Due to this, conventional, non-magical attacks have a 50 % chance of not dealing damage to Angry Spirits. Magical weaponry like MEWs, Enchanted weapons and Spirits will deal their damage like normal. Conventional weaponry only harms the flesh and blood host.

Slow: Due to inner combat for control between the Angry Spirit and the Shaman, Possessed Shaman isn't very fast; their walking speed is 2 AP for 2 meters/1 hex.

Spells of Possession: Possessed Shaman have access to **3 Shaman Incantations**, with Potency of 5. If the possessing spirit is a lesser spirit of a pact spirit, they also have 2 spells from their corresponding Pact Spirit. If the possessing spirit is a departed creature, they instead have an additional attack, **Spirit Slap[†]**.

†Spirit Slap (5 AP, 1 Strain): The spirit manifests their anger into a more solid state, giving their target a hefty, chilling hit. This attack gives 2+(2) Cold damage and has a reach of 2 meters/1 hex.

Creature drops:

- Random Creature Drops (1d6 u.)
- Blue, Green or Red Herbs (1d6 u.)
- Caps (4d10 u., Luck doubles u.)
- Random weapon (1 u.)
- Salt (1d4 u.)

Possessed Shaman/Malicious Spirit

"When a shaman gets possessed by a malicious -truly, unfailingly vile- spirit, it tends to be a problem for the whole community, even if the spirit doesn't stay for long. They crave wanton murder and chaos. If the angry spirit is one yearning for justice, the malicious one yearns to create injustice everywhere it goes. And it does this for fun."

- Merchant Silver Bit

Type: Abomination/Sentient

EXP: 200

HP 13, DT 2, AP 12, Size 0, Karma -25

Potency 12, Strain 15

Immunities *none*

Resistances Poison 10%, Radiation 5%

Weaknesses *none*

Additional Combat Details:

Bite (3 AP): Though Malicious spirits possess shamans in similar manner to angry spirits, they have a lot more control over their host, and will use the host's bite attack only if other methods fail. Their host's bite deals 3+(3) damage, with a Critical success giving a chance to cause Bleeding.

Wasteland Weaponry: Unlike Angry Spirits that want justice on an individual and are in a fit, Malicious spirit is cunning and craves the chaos of vile deeds. They operate weaponry just as any sentient creature would, with combat skills the same across the board. They tend to favor MEWs.

Nefarious Spirit: Malicious Spirits are creatures that have overtaken their host, streaming out of their back barely visible. Due to this, conventional, non-magical attacks have a 50 % chance of not dealing damage to Angry Spirits. Magical weaponry like MEWs, Enchanted weapons and Spirits will deal their damage like normal. Conventional weaponry only harms the flesh and blood host.

Fast Hooves: Malicious Spirits are pressed for time, and thus they put a little bit more oomph to get to their unfortunate victims, crossing fields with alarming speeds of 1 AP per 4 meters/2 hexes.

Spells of Possession: Possessed Shamans have access to **4 Shaman Incantations**, with Potency of 12. If the possessing spirit is a lesser spirit of a pact spirit, they also have 4 spells from their corresponding Pact Spirit. If the possessing spirit is a departed creature, they instead have an additional attack, **Spirit Slap[†]**.

†Spirit Slap (5 AP, 1 Strain): The spirit manifests their anger into a more solid state, giving their target a hefty, chilling hit. This attack gives 3+(4) Cold damage and has a reach of 2 meters/1 hex. On a Crit Success it can cause Freezing-status effect.

Creature drops:

- Random Creature Drops (1d6 u.)
- Blue, Green or Red Herbs (1d8 u.)
- White or Black Herbs (1d4 u.)
- Caps (2d100 u., Luck doubles u.)
- Random weapon (1 u.)
- Salt (1d4 u.)

Description:

Possessed Shamans are the unlucky ones who end up overtaken by the spirit they've invited to their bodies for a visit. Not all spirits come with peaceful intentions, after all. The shaman has lost control of their body to the spirit that is currently inhabiting them acting out; angry spirits are usually lashing out from an injustice done to them and malicious spirits could very well be the source of those injustices.

Unless one focuses entirely on the spirit itself, which is barely visible to begin with, many Shamans end up dead due to becoming the easier target to stop the rampaging spirit. Attacking only the spirit will save the shaman. Likewise, spirits can only inhabit their Shaman for short period of time; if the spirit itself is not destroyed, they may appear again on some other Shaman...

Angry spirits are often in a fit, too fury-struck to really operate their Shaman efficiently, and as such are usually less dangerous to face than their more malicious brethren. However, the

angry spirit is more destructive in that they don't actively plan, and will attack anything in sight, and cause disruption. However, the spirit can be pacified by trying to help it with its problems, though a single combat is often not enough to make this happen.

In contrast to angry spirits, malicious ones are the souls and lesser spirits with truly evil intent; murderers and twisted creatures that enjoy pain and suffering. They are far more calculating -and thus dangerous- than their brethren, and their goal is to continue their twisted work. They are keenly aware of how little time they have on a Shaman, so they tend to be swift in their intentions, and elusive to capture. Where angry spirits are usually heard from the general ruckus and calamity they cause, malicious spirits are the ones that shank unsuspecting ponies in the back alleys and disappear into the shadows. Probably cackling, too.

Protochimera

"I don't know what to make of this creature, to be frank. Its species is apparently not related to the chimera -and insists it is called just chimera, others are fakers- as it happily informed me before trying to eat me. I got away by getting it to argue with itself about which part of a pony tastes best, shoulder or butt. Despite its habit of arguing with itself, it is a versatile hunter."

- Verdant Brink, Hunter

Type: Non-Mutated Animal/Sentient

EXP: 300

Potency 15, Strain 25

Immunities Radiation

Resistances Poison 30%,

Weaknesses none

Additional Combat Details:

Firebreath (4 AP): Protochimera's goat head can breathe fire at their opponent.

The attack's reach is 6 meters/3 Hexes and it deals 4+(2) fire damage. It can inflict Burning-status effect upon hit.

Rend (4 AP): The Protochimera's claws are sharp and capable of ripping through leather with ease. The attack deals 3+(1) damage and ignores 1 DT.

Electric Zap (8 AP, 3 Strain): The tiger head of the Protochimera gives electric shocks with its bite, dealing 2+(4) electric damage and can inflict Stunned-status effect upon hit.

Poison Spit (5 AP, 4 Strain): The snake tail of the Protochimera spits a powerful, long-reaching venom at prey further away; this attack has a range of 20/40/60. While this attack doesn't do much damage, 2+(2), the magically assisted venom seeps in with a 2x60 % chance of poisoning the target. If successfully poisoned, the target gets Freezing-status effect.

Aware: Unless distracted, Sneak attacks against this creature suffer a -20 to the hit due to the multiple pairs of eyes both front and back of the creature.

Easily Distracted: The heads of the Protochimera are all separately conscious, each with their own brain. As such, is it easy for them to get distracted. Distract-action against the Protochimera has a +10 to the attempt.

Elementalistic: As a non-mutated, ancient magical beast, Protochimera possesses a unique quality inherent in their hybridness; +1 END to resist Burning-, Stunned- and Freezing-status effects.

Quick Runner: Protochimera is, despite living in soggy marshes, a fast, agile beast; thus, they have a +2 to their Initiative.

Creature drops:

- Poison Gland (1 u.)
- Fire-Resistant Hide (1d2 u., Luck doubles u.)
- Teeth (1d20 u.)
- Chimera Egg (1d2 u, Luck doubles u.)

Description:

Protochimera or, as it used to be known, Chimera, is no relation to the bug-cat hybrid of Stable 24. Protochimera is a large hybrid creature with a tiger's body and front legs, goat's back legs, two heads of a tiger and a goat specifically. Their tail is instead a living, sentient viper with a powerful venom. In addition, the ancient creature boasts an impressive usage of fire, ice and electric powers.

Inhabitant of mostly marshes and bogs, radigators and cragadiles are natural enemies of the Protochimera. With the added boost from mutations, radigators have considerably thinned the numbers of the old magical beast from their marsh territories. This occasionally means that the intelligent creature strays closer to settlements than it feels comfortable with, especially with ponies' tendency to shoot and ask later.

It can be reasoned with, though it has always held ponies in its diet, and with its hunting grounds shrinking due to the apocalypse, it is more than likely to terrorize ponies. Due to being sentient, the creature can be of a variety of karma, much like ponies, zebras or griffons. Its many heads are all sentient separately, treating each other much like conjoined triplets, and due to this they're prone to getting distracted with each other, often arguing over actions.

The creature lays eggs much like a reptile, and curiously its eggs can be substituted for the far rarer Chimera's eggs in Alchemical and medical recipes.

Puckwudgie

"I was recently stalked by some Puckwudgies, or Pucks for short? I could sense they were rushing from one bush to another, but not once did I actually see them. One of them burnt my tail to cinders, and laughed like a bastard afterwards."

- Verdant Brink, Hunter

Type: Non-Mutated Animal

EXP: 400

STR 4, PER 5, END 7, CHA 3, INT 7, AGI 5, LCK 5

Explosives 65, Melee 50, Sneak 60, Thaumaturgy 50, Unarmed 45

HP 12, DT 2, AP 12, Size -1, Karma -10

Potency 18, Strain 25

Immunities Radiation, Taint

Resistances Poison 25%,

Weaknesses none

Additional Combat Details:

Bite (3 AP): Though Puckwudgies have sharp teeth, they lack power in their jaws to do considerable damage with their bite, and favor their other skills more. This attack deals 3+(2) damage, and can cause a Bleeding-effect.

Combustion (7 AP): One of the innate abilities the magical Puckwudgie has is the ability to create grenade-like explosions around it. The attack is a Tiny Splash Template, with the range of 10/20/30 meters. The attack deals 3+(3) damage and follows the rules for explosives.

Poisonous Barb (4 AP): In case the Puckwudgie finds itself out of Strain and too far from its enemies to attack with a Combustion, it turns its back towards enemy and launches the spikes from its back towards their enemy. However, their aim with this attack is poor and they suffer -10 to their Melee-skill when using this attack. This attack deals 2+(2) damage (range 20/40/60), and has a 2x60% chance of poisoning their target. When successfully poisoned, the poison negates target's Strain recovery until healed. This poison is a long-lasting effect.

Magical: Puckwudgies have innate magical abilities, having access to Conjunction and Transmutation schools of magic.

Shadow-Walker (5 AP, 5 Strain): The Puckwudgie can turn invisible for short period of time; After activating this skill, they turn invisible for the rest of their current turn and their next turn. They return visible at the end of their next

turn. If the creature takes damage while invisible, they will become visible again. Characters that try to spot the invisible Puckwudgie have -50 to their roll.

Creature drops:

- Thorn (1d6 u.)
- Caps (1d10 u., Luck doubles u.)
- Venom Sac (1 u.)

Description:

Puckwudgies are small, multicolored creatures that resemble bipedal hedgehogs. Often appearing in small groups, these spellcasting creatures can be annoying to deal with. However, unless they manage to catch their opponent by surprise, they're rarely deadly, preferring to give their target a good scare, as they are somewhat malicious in their nature.

Mostly carnivorous, these creatures do not turn down an occasional pony or two, if they manage to bring one down. As they are intelligent creatures, but not patient, they operate on a language of their own, and are capable of planning strategies. This includes retreat when things take a turn for the worse in combat. Capable of ambush tactics and stalking, Puckwudgies can tail their target for kilometers at the time, staying on their target's heels with ease.

To summarize, the Puckwudgie is most commonly a mean-spirited tactician than a fighter, preferring to use their magic from afar over their rather feeble strength.

Quaray Eel

“Quaray Eel makes their homes in well... quarries and giant rock formations such as mountains. They make large caverns inside the quarry walls, caverns and pretty much any crags big enough for their massive bodies. They stalk for any passing prey that often unknowingly pass said places. Easily swallowing many of their prey whole, they are also witnessed tossing their prey between themselves for who knows what amusement.”

- Verdant Brink, Hunter.

Type: Non-Mutated Animal

EXP: 350

STR 8, **PER** 5, **END** 5, **CHA** 2, **INT** 3, **AGI** 6, **LCK** 3

Sneak 50, **Unarmed** 70

HP 18, **DT** 3, **AP** 12, **Size** 3, **Karma** 0

Immunities Radiation

Resistances Poison 60%,

Weaknesses none

Additional Combat Details:

Bite (8 AP): Two rows of foal sized teeth crunch onto Quaray Eel's prey, dealing $5+(3)$ damage.

Swallow Whole: Due to its size, the quaray eel can easily swallow a pony whole. If the quaray eel wins an opposed roll of STR against the target's AGI, the target is swallowed whole. After this, on Quaray Eel's turn, the target takes 2 HP damage as the eel is slowly munching away, ignoring DT. After 3 Rounds, on the Quaray Eel's turn, it spits out the eaten target, dealing 2 HP damage, ignoring DT. The target can attempt Break Free-action to get out.

Fling (6 AP): Quaray eels use their large heads to fling anything size 0 or smaller into the air and let them drop to the ground. This attack utilizes Falling Objects and Falling rules. The target is flung upwards *1/4 meters*, and a size 0 target takes $4+(4)$ damage.

Burrower: Quaray Eels powerful bodies and thick skulls allow them to dig through most terrains. They ignore movement penalty of +1 AP on difficult terrain and can avoid many obstacles.

Digger (3 AP): Quaray Eel can dig underground and travel distances unharmed, and pop up from the ground like very deadly daisies. While underground, their movement AP cost is doubled. Getting back above ground costs 3 AP.

Creature drops:

- Teeth (1d6, Survival doubles u.)
- Hide (1d4, Survival doubles u.)
- Armor, Poor condition, (1, LCK to obtain)
- Weapon, Poor condition (1, LCK to obtain)

Description:

Quarray Eels are huge, red-shaded eels that dwell inside rocky holes, waiting to lunge at a possible prey. As they're quite stationary, they have developed a slowed metabolism that allows them to go without nutrients for several years, perhaps even a decade. However, also due to this stationary nature, they usually take anything that wanders close enough as their prey, be it a radbit, pony, griffon or manticore.

They are relatively sneaky creatures, and can on occasion, surprise their victims by sneaking their heads behind the creature and gulping them up, if the victim remains unaware of their surroundings.

Quarray eels' burrows can be even a kilometer long, and any offspring -Quarray eels' mating habits are a mystery- seem to branch off further into the rocky terrain they call home, likely to keep food sources from going scarce.

These eels inhabit any large cliff, mountain or canyon, anything big enough to support their weight. They have been found in the warmer outskirts of Equestrian north, burrowing through frozen rock and soil with relative ease.

Radbit

"Radbits are probably the nicest creature in the Wastes that you can come across. Usually skittish and fleeing the moment they notice you, they pose little threat. Their only real threat comes from the fact that they're very, very busy breeders and as such, it is not entirely unheard of for a mega-swarm of Radbits devouring anything in their path aside from stone and gems like a massive, kind of cuddly tidal wave."

- Verdant Brink, hunter

Type: Mutated Animal

EXP: 10

STR 3, PER 7, END 4, CHA 5, INT 5, AGI 9, LCK 4

Sneak 50, Unarmed 40

HP 6, DT 0, AP 14, Size -2, Karma 0

Immunities none

Resistances Poison 30%, Radiation 25%,

Weaknesses none

Additional Combat Details:

Bite (3 AP): Tiny yet sharp fangs still hurt the unfortunate target, dealing (2) damage.

Coward: Radbit is not an especially strong fighter, and tends to run away at the first sign of trouble. Radbits have a -20 to resist intimidation tactics. When it reaches Pain Thresholds, there is a chance it will flee as if intimidated.

Quick Runner: Radbits are fast, and due to this they get a +2 to their Initiative rolls.

Swarm: Radbits appear in large groups, engulfing a Small Splash template. Due to their large numbers, Radbit swarms ignore 1 DT and gain a +5 to Unarmed when making Attack of Opportunity attacks.

Creature drops:

- Paw (4 u.)
- Hide (1 u)
- Caps (1d10)

Description:

Radbits are like their unmutated cousins, fast and shy. They tend to leave potential dangers, meaning almost everyone, alone when they're out wandering by themselves. They also make a fine meal if one manages to hunt one.

They aren't, however, completely harmless creatures. With the tendency to breed like rabbits - because they are - they quickly form large herds if the food is plenty. It is not unheard of a large swarm of radbits consuming all the produce of an unprotected wasteland farm field. There is a very good reason why farmers carry shotguns, even after the world's end.

Radbits tend to stick to temperate climates, and any semblance of woodlands if possible. With a good spot found, they quickly burrow a nest - that sprawls out with the growing radbit population as time goes by. It has been documented that the largest mega-swarm's burrow spanned several kilometers in length.

Rad-Butterfly

"An irradiated, rather small butterfly that is relatively harmless if it appears alone. However, they rarely do that, instead they appear in massive swarms, and quickly surround a pony, bathing them in their radioactive dust that they release from their wings as they flap them. And as these creatures do not eat, they gain their nutrients from the pony's sweat and blood, which they lap up with their proboscises. They don't want to eat you, but they sure as hell want you away from their turf. I know, because my geiger's beeping like crazy, and they're OUTSIDE the building. Wonderful!"

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 50

STR 2, PER 3, END 3, CHA 4, INT 2, AGI 5, LCK 4

Sneak 40, Unarmed 40

HP 4, DT 0, AP 12, Size -4, Karma 0

Immunities Radiation

Resistances Poison 10%,

Weaknesses Cold (2x DMG)

Additional Combat Details:

Rad Shower: Rad-Butterflies spread radiation onto anything threatening or simply passing their areas. They release a radiated dust cloud, with a 3x30 % chance to give 2 Rad Tokens.

Flying: Rad-Butterflies have working wings, flying at a pace of 2 meters (1 Hex) for 1 AP.)

Big Swarm: Rad-Butterflies appear in large groups, engulfing a Small Splash template. Due its large size of swarm, explosives and other similar Area of Effect attacks consider Rad-Butterflies to be Size 0.

Creature drops:

- Irradiated Material (1 u. Survival doubles)
- Wings (2d8 u. Survival doubles)

Description:

Rad-Butterflies are a mutated butterfly, that is largely harmless on their own. However, when they migrate as they travel in large swarms, the radioactive dust on their wings can quickly down a pony with radiation poisoning if they happen to engulf them.

Rad-Butterflies are one of the few creatures that do not have ponies in their diet, as they, much like non-mutated butterflies, live entirely off of nectar and liquids. They can feed on pony's sweat or blood, but that is rare and seems to be reserved for times of famine. This can sometimes lead to a wastelander's demise, if a migrating swarm takes a pit stop on them.

Rad-Butterflies migrate south-east, to the borders of Abyssinia. Rad-Butterflies fare poorly in the cold, so they're noticeably lacking in the more arid temperatures of the Equestrian north.

Radhog

“Essentially what happens when a pig gets irradiated. Foul-tempered and heavy, this creature is a bit of test for any hunter. They’re rather smart and they can easily kill a pony, so it is important that any hunter that tries to down one does it very, very quietly. Once they notice you, you’ll be knocked down and gored by their massive teeth, as they’re far faster than they seem. But hunting them is worth it, because bacon is delicious. And the bragging rights.”

- Verdant Brink, hunter

Type: Mutated Animal

EXP: 100

Sneak 50, Unarmed 65

HP 15, DT 2, AP 13, Size 0, Karma 0

Immunities none

Resistances Poison 50%, Radiation 35%, Cold +2 DT, +2 END vs Cold exposure

Weaknesses none

Additional Combat Details:

Gore (5 AP): When the prey has strayed close enough, the Radhog attacks, attempting to pierce the creature with their large tusks. This attack deals 2+(3) damage, and can cause a Bleeding-status effect.

Ram (3 AP + Distance): Radhogs Charge at their foes, gaining both speed and force behind their ram. Ramming deals 2+(2), plus additional (1) damage for every 4 meters (2 Hexes) radhogs run (4 meters for 1 AP), dealing up to (5) damage after 20 meters (10 Hexes).

Creature drops:

- Radhog Meat (1d4, Survival doubles u.)
- Hide (1, Survival doubles u.)
- Caps (1d10, LCK doubles u.)

Description:

Radhogs are the result of Equestria’s many pigs gaining a radioactive bath after the Last Day. Though initially rare, the mutations eventually made the Equestrian suid a force to be reckoned and numerous to boot.

Radhogs have a scraggy, coarse fur that usually hangs in patches, with inflamed, reddish-colored flesh spotting the creature. They have long, slightly curved tusks on their mouth and a

keen sense of smell with their smushed snout. The Radhog's diet is that of an omnivore; meat, roots, berries, insects, eggs and an occasional equine or griffon that wanders too close.

Radhogs are social creatures, which makes hunting them especially dangerous, as they will attack the pony as a group. Just shy of a general mare's height and several times heavier, they can easily knock a pony down. Their long tusks can also cause serious injuries. In addition, the radhogs have a vicious temper, known to be unpredictable at best. If one comes across a radhog unprepared, the wisest move is to slowly back away, to not startle the creature. And even then it can add the poor sod to their "Things I do not like today" list on a whim.

They are also relatively hardy creatures, often shrugging off bullet wounds, and several are unfortunately often needed to down this mighty boar.

Radrel

"Squirrels used to be small and mostly harmless, adorable little rodents leaping from tree to tree, though often raiding seeds, nuts and such from farmsides. Now, boasting a decorative twin-tail, they eat everything, and easily burrow into weak wooden structures anywhere within the Wasteland, being mostly just annoying vermin to easily frighten away. Oh, and definitely nice hat ornaments."

- Verdant Brink, hunter

Type: Mutated Animal

EXP: 10

STR 2, PER 6, END 4, CHA 3, INT 4, AGI 10, LCK 8

Sneak 60, Unarmed 40

HP 2, DT 0, AP 15, Size -3, Karma 0

Immunities none

Resistances Poison 25%, Radiation 30%,

Weaknesses none

Additional Combat Details:

Bite (3): Small but strong teeth capable of digging into skin if pushed into a corner, dealing (2) damage.

Coward: Radrels are not often willing to fight anything larger than them, and tends to run away at the first sign of trouble. Radrels have a -2 on INT to resist intimidation tactics. When they reach Pain Thresholds, there is a chance they will flee as if intimidated.

Quick Runner: Radrels are fast, and due to this they get a +2 to their Initiative rolls.

Creature drops:

- Tail (1 u.)
- (Tiny) Hide (1 u.)
- Vegetable stash (1d6 u. fresh vegetables, Survival doubles u.)

Description:

Radrels, the other leaping rodents beside radbits, are quite perfect practice for starting hunters due to their small size, and both excellent and fast maneuvers through the branches, bushes

and ruins of all sorts. They startle easily, and do flee as long as they can. Still, those sharp teeth can deal nasty wounds if push comes to shove.

A radrel bears enough meat for the day, and few pelts are perfect for warming one's hooves. But a truly devious hunter will wait till the radrel reveals it's stash. Having mutated and adapted, the radrel is omnivorous, but also a collector that stashes food away for later use.

Radigator

"Radigators are mutated alligators, often waiting for prey just below surface, after which they sprung forward and drag the hapless pony to the deep, drowning them. They're no slouches on land either, capable of truly terrifying speeds once they're determined to kill you. I recently encountered one in Pon Evil lake."

- Verdant Brink, hunter

Type: Mutated Animal

EXP: 250

STR 7, PER 5, END 4, CHA 4, INT 4, AGI 6, LCK 4

Sneak 65, Unarmed 70

HP 15, DT 2, AP 12, Size 1, Karma 0

Immunities none

Resistances Poison 25%, Radiation 40%,

Weaknesses none

Additional Combat Details:

Chomp (8 AP): Radigators' gaping maw of tremendous force crush anything caught between, dealing $6+(4)$ damage, with additional +40% chance to Cripple its prey.

Tail Sweep (6 AP): The tail is not just for the show, as it can easily snap bones and knock people down. Tail Sweep deals $3+(2)$ damage and can knock opponents prone.

Fast Swimmer: Their strong tails help radigators reach high speeds of 6 meters (3 Hexes) for 1 AP.

Slow Walker: Radigator's ground speed is rather slow due to their short legs, moving only at the speed of 2 meters (1 Hex) for 2 AP. However, when Charging, radigator's ground speed can reach up to 4 meters (2 Hexes) for 1 AP, instead.

Surprise: Radigators often wait and sneak attack their prey. They gain an additional +5 chance to deal Critical damage when making Sneak attacks, but the AP cost of the attack is increased by 3.

Creature drops:

- Radigator Meat (1d4 u, Survival doubles u.)
- Hide (3, Survival doubles u.)

- Teeth (1d10, Survival doubles u.)
- Junk (1d4)

Giant Cragadile

"A mutated Cragadile, a variant of Radigator is not much stronger than a radigator, but it has significantly higher defenses considering it is made of stone. So, taking it down will take a bit longer than taking down a radigator."

- Verdant Brink, hunter

Type: Mutated Animal

EXP: 400

Immunities none

Resistances Poison 70%, Radiation 75%,

Weaknesses none

Additional Combat Details:

Chomp (8 AP): Giant Cragadile's gaping maw of tremendous force crush anything caught between, dealing $7+(4)$ damage, with additional +40% chance to cripple its prey.

Tail Sweep (6 AP): The tail is not just for the show, as it can easily snap bones and knock people down. Tail Sweep deals $3+(2)$ damage and can knock opponents prone.

Slow Walker: Giant Cragadiles' ground speed is rather slow due to their short and stony legs, moving only at the speed of 2 meters (1 Hex) for 2 AP. However, when Charging, their ground speed can reach up to 4 meters (2 Hexes) for 1 AP, instead.

Surprise: Giant Cragadiles often wait and sneak attack their prey. They gain an additional +5 chance to deal Critical damage when making Sneak attacks, but the AP cost of the attack is increased by 3.

Creature drops:

- Hide (1d2, Survival doubles u.)
- Gem, worth 100 caps (1d2, LCK doubles u.)

Description:

Radigators are alligators mutated by the arcane and necromantic fallout, giving them larger size and quite a temper. The mutations haven't changed their hunting habits, only given them larger prey to hunt. Giant cragadiles, on the other hand, resemble their fleshy cousins very closely, except their rocky nature giving them not just a harder surface but also some color variations depending on the stone type.

Radigators and cragadiles both seek the same territory, murky ponds, lakes and rivers where they can easily hide and wait for potential prey to pass too close to them. However, they do not like to share said territory, so if one type is found in a pool of water, one can bet the other is nowhere to be seen.

Radroach

"I. Found. A. Giant. ROACH! It was, no kidding, the size of a foal! Oooh, this is so exciting~ We had theorized that the magical fallout might cause some effects in insects, but gigantism? I just wonder how they manage to stay... alive, considering oxygen levels and... anyway, I named this one Wilford. Wilford likes to scramble around the walls a lot, and he seems to really like the comfiness of the Plexiducts."

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 20

Immunities none

Resistances Poison 70%, Radiation 80%,

Weaknesses none

Additional Combat Details:

Bite (3 AP): The radroach's insectoid mouth can still hurt the unfortunate target, dealing 1+(1) damage.

Fast: Radroaches have high ground speed, moving at a speed of 6 meters (3 Hexes) for 1 AP.

Scurry: Radroaches often latch onto their targets, scurrying over them with their tickling, disgusting feet, distracting their target with a Minor Distraction.

Insect Brain: Crippling the Radroach's antennae causes it to gain Mind Controlled and Enraged -status effects and make them attack the nearest creature, be it friend or foe.

Quick Runner: Radroaches move at a terrifying speed, giving them +2 to their Initiative rolls.

Creature drops:

Radroach Meat (1d4 u., Survival doubles u.)

Description:

What is an apocalypse without the surviving cockroach? Worthless. Just like the radroach. This mutated insect has retained most if not all behavior cues from their non-mutated brethren, such as preferring dark over light, being nocturnal social creatures and are generally disgusting to most sentient creatures.

Radroaches are relatively timid creatures, only attacking if they've been provoked, and tend to run away from light-sources. Radroaches are usually considered an annoying, dirty pest rather than a threat to one's health, though radroaches can contaminate one's food-supply with their fecal matter.

However, despite their initial weakness, they are suited to most environments and adapt well into their surroundings. Aside from the freezing northern-Equestria near the Crystal Empire, radroaches are a common sight.

Magical radiation rarely bothers them much, neither do toxins. Radroaches are omnivores to the extreme, eating anything from soiled clothes, to skin flakes, corpses, paper, meat and vegetables to name a few. Due to their hefty size, they consume a lot of nutrients and a swarm of radroach can easily destroy a warehouse's worth of food or building materials if left untreated.

Should a radroach be threatened enough to attack, they will do so by biting their target. They often jump and skitter on the target, trying to find a suitable spot. This is often quite intense for those that dislike these critters.

Radscorpion

"Though we do specialize in insects, we do have a few arachnids here in the labs, including some scorpions from the Badlands. The specimens did react quite interestingly to being exposed to I.M.P; much like the others, they grew in size, about the size of an average mare, and their toxins got much more potent! As is evident by professor Hottentotta's recent trip to the sick-ward. I admit I am quite curious of the venom's effects on him. He is rather fascinated as well."

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 200

STR 6, PER 6, END 5, CHA 3, INT 4, AGI 6, LCK 4

Sneak 50, Unarmed 50

HP 15, DT 2, AP 13, Size 0, Karma 0

Immunities none

Resistances Poison 90%, Radiation 80%,

Weaknesses none

Additional Combat Details:

Pincers (5 AP): Radscorpions possess giant pincers with strong grip and considerable cutting power, capable of holding down its prey with ease. The pincers deal 3+(2) damage and ignore 1 DT.

Sting (6 AP): Radscorpions sting their foes with their hefty stinger. This may poison target at 2x50% chance, and deals 2+(3) damage. This poison is necrotic, negating the target's Natural healing until cured.

Burrower: Radscorpions utilize their powerful pincers to dig through most terrains. They ignore movement penalty of +1 AP on difficult terrain and can avoid many obstacles.

Firm grip: Radscorpions have their Grapple Actions cost -1 AP less, and their STR is considered +1 higher when Grappling.

Underground Ambusher: Radscorpion strike at their prey with surprise tactics by popping out of the ground. They receive +20 bonus to Sneak when underground.

Creature drops:

- Poison Gland (1 u.)
- Stinger (1 u.)

- Spider Leg (1d8 u.)
- Radscorpion Egg (1d4, Survival doubles u.)

Description:

Radscorpions are the mutated, wandering scorpions that due to their heightened survivability, have left the barren badlands of the southern Equestria to become a common sight in all but the most northern parts of the Wastes.

Though an old saying tells that the most dangerous scorpions are the smallest ones, the radscorpion has clearly missed the memo. It is huge and armed with potent, necrotic poison that kills the cells in the body, making recovery nigh-impossible unless cured with an antidote. Due to this, radscorpions rarely kill their victims outright, but rather prefer to follow them, inflicting wounds when the target is letting their guard down to whittle down the target. Eventually, the poor sod will succumb to their wounds and keel over, giving the Radscorpion what they hoped for; a sufficient meal.

However, on occasion radscorpions can come across the same prey, which then becomes a race of which scorpion can down the victim first, technically winning the right to food. Of course, this rarely ends peacefully, as the losing radscorpion can wrestle the winner for the spoils. These wrestling matches have something of a gentlecolt's conduit attached to them, as no stinger is used. Usually the loser of the wrestling match crawls away in shame.

Radscorpions eat most insects, mammals and on occasion, each other, steering clear of the Hellhounds, robots and most plant-based mutants as all of these creatures offer little to no nutritional value to the Radscorpion, or are too much effort and dangerous to face.

Radscorpions are solitary creatures, only tolerating each others' companionship when mating or carrying offspring. And in the case of mating, the deed is done quickly and parting even quicker, unless the male wishes to become the female's next meal.

Radstag

"There is something inherently sad in the mutation that befell the Deer kingdoms of various forests in Equestria, destroyed by their own madness caused by the radiation. They used to be magnificent, wise creatures that remained neutral in the war and now they're mindless husks that roam their ruined kingdoms and either attack or hide from any passerby. Though I've heard they're quite different in the Everfree and Whitetail Woods..."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 100

STR 5, PER 6, END 5, CHA 2, INT 2, AGI 8, LCK 5

Sneak 50, Unarmed 60

HP 14, DT 2, AP 14, Size 1, Karma 0

Immunities none

Resistances Poison 75%, Radiation 40%,

Weaknesses none

Additional Combat Details:

Buck (5 AP): Radstags can buck at their foes, causing 2+(3) damage.

Trample (8 AP): Radstags can charge at their foes, trampling them under their weight. Trample causes 3+(2) damage, as well as additional +(1) damage for each size category smaller than Radstag.

Quick Runner: Due to their flexible bodies and sharp reflexes, Radstags gain +2 to initiative rolls.

Twin-headed: As Radstags have two heads, crippling one head has only half the effect. (-2 PER, -1 INT; -2 max AP)

Woodlands Stride: Radstags run with grace despite their disproportionate bodies, ignoring the +1 AP cost of Difficult Terrain.

Creature drops:

- Abomination Flesh Piece (1d4, Survival doubles u.)
- Antlers (4 u.)
- Hide (1d2, Survival doubles u.)
- Junk (1d6)
- Random Weapon (1)

- Alchemical Brew (1, LCK to obtain)
- Random Zebra Alchemy recipe (1, LCK to obtain)

Description:

Radstags, the ghoul variant of the many deer communities that inhabited the vast Equestrian forests, are often considered the unwilling victim of the war. Caught between the warring Equestria and the Zebra nation, the deer considered themselves neutral in the conflict. For all good that it did for them, once the balefire missiles rained down.

Radstags mutated by aforementioned balefire, growing an extra head and extra legs. Their legs are long and thin, little more than sticks that protrude from their patchy furred body. Their antlers vary in size, with one head having a larger set than the other, likely so they do not tangle. Their antlers glow green in the dark, making them easier to spot during the night.

The mental state of the mutated deer suffered greatly by the necromantic magic that drove most, if not all, of the now-named radstags to madness. Now little more than animals working on basic instinct, these pitiful souls flee from anything they perceive as a threat. They rarely fend for themselves, but it is known that during mating season, the bucks get highly aggressive, enough to overcome their usual timid nature and attack anything in a blind rage.

Should they end up in a fight anyway, they will trample and buck their foes in order to daze them enough to make an escape attempt from the situation. Though deer were notorious for their nature magic and concoctions used to tend to their forest homes, but this magic has been lost with the radstag.

Raider

"You don't do deals with raiders... not without it biting you in the arse later. It's the best that any caravan-merchant stays away from their ilk, they're nothing but Trouble. They're not content just robbing you like some common thug, they prefer mutilating you beforehoof or worse... Now I'm not saying that they don't have a bad deal dealt to them, but that doesn't give them the right to murder, rape and pillage as they see fit. Sometimes in that order."

- Merchant Silver Bit

Type: Sentient

Immunities none

Resistances Poison 10%, Radiation 5%,

Weaknesses none

Additional Combat Details:

Wasteland Weaponry: Raiders can carry just about any weapon and armor imaginable, though preferring low-end weapons for their abundance.

Raider Magic: As ponies, zebras and griffons, Raiders are capable of Magic. They tend to favor combat-focused magic, and forgo protective ones. Raiders have 2-3 spells available to them.

- Earth Ponies: Branch of Might
 - Pegasi and Griffons: Agility-based Maneuvers
 - Unicorn: Conjunction and Illusion Magic Schools
 - Zebra: Alchemical Drugs and Talismans, Shaman; Possession Spirits or Spirit of Embers or Shadows
-

Druggie: Raiders have a penchant for combat Chems, such as Painkillers, Buck and Dash. However, many raiders become addicted junkies due to overuse, and providing them Chems may allow dealings with words alone.

Pain Tolerance: Raiders, partially due to their abuse of Painkillers, and due to their tough life, have higher pain tolerance. Raiders' Pain Thresholds begin from 3-2 and 1, rather than starting from 5-4.

Unorganized: Raiders often lack proper leadership, and are instead ruled by fear, and the show of force. However, as they have hardly any respect for one another, death is a sign of weakness, and not something Raiders can be demoralized with by eliminating leaders.

Creature drops:

- Main Weapon (1 u.)
- Additional Weapon (1-2 u.)
- Random Chem (1d2, LCK doubles u.)
- Armor or Clothing (1 u.)
- Caps (1d12, LCK doubles u.)

Description:

Raiders are one of the more mismatch groups that wander the Wastes, though most common race is a pony for the sheer fact that ponies often outnumber the other races.

Raiders are known for their penchant for horrid, over-the-top violent acts such as stringing corpses to ceilings, mutilating both corpses and the living alike. Reasons why raiders behave as they do are difficult to pinpoint, as some attest it to the heavy use of alcohol and drugs, while others suggest a special brain disease that turns them hostile and yet another claims desperate situation and higher susceptibility to mental illnesses.

Raiders are often violent towards both outsiders and those in their own group they view weak or inferior. Due to this, raiders are rather lackluster group who listen to one person only; themselves. Raider initiation rituals are quite savage, including severe beatings and dangerous doses of drugs. A considerably strong individual can rise to the rank of a raider overboss, the de-facto leader of the group by being stronger and more menacing than the rest of the group. This will however mean that said individual will always be doomed to keep their guard up, lest they be taken down from their position by power-hungry usurpers.

Though is is easy to imagine that raiders value physical strength only, there have been

instances where a particularly brutal and cunning unicorns has risen in the ranks all the way to overboss-status. It could be said that on some level, raiders approve all kind of power, be it brawn, magic or high intelligence, if it can be put to good use.

In combat, raiders prefer to attack head-on, trying to overwhelm their opponents with numbers, and use combat drugs such as Dash and Stampede to their advantage. Use of drugs has left them unpredictable, but they do still have a sense of self-preservation; when things start to turn bad for them, they will attempt to flee.

Robobrain

“Somepony had the bright idea to use various brains for these robots, apparently in order to have the most advanced artificial intelligence - well, no longer artificial due to the brains. A unique mix of biology and technology, these cylindrical robots on tracks perform well. As long as the brain-turned-processor hasn’t malfunctioned or decayed too much in the centuries after their manufacture.”

- Scribe Star Twinkle

Type: Machine

EXP: 200

STR 5, PER 5, END 5, CHA 6, INT 6, AGI 4, LCK 4

Barter 50, Diplomacy 50 Firearms 50, MEWs 60, Melee 55, Sneak 30, Unarmed 40

HP 11, DT 3, AP 12, Size 0, Karma Varies

Immunities Poison, Radiation, Taint *none*

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Mesmerize (8 AP): Robobrains have a mesmerizer built into them, causing their target to become Mind-Controlled. The target has to be directly in front of the robobrain for the attack to work. The target may roll INT -1 to resist the effect.

Wasteland Weaponry: Robobrains have internal weaponry of various models, though mostly using MEWs.

Self-destruct: Upon reaching 0 HP, Robobrain explodes with a Small Splash template centered on itself. Deals 2+(2) damage.

Subdued Sprint: Robobrains are incapable of using movement actions Sprint and Charge.

Sentience: As a rare occurrence, Robobrains may retain their sentient minds. A sentient Robobrain has additional +2 INT, as well as access to Diplomacy and Barter.

Coded Killer: Even if the Robobrain was lucid enough to keep their sanity, their programming often overrides peaceful solutions. Trying to intimidate or solve matters without violence against the Robobrain always has -10 penalty.

Creature drops:

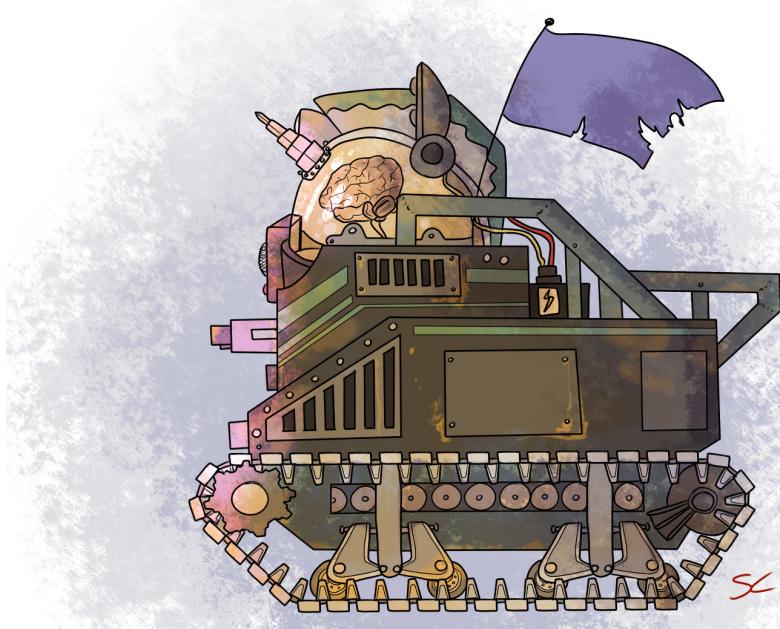

- Scrap Metal, Common (1d4, Mechanics doubles u.)
- Scrap ArcanoTech, Common (1d4, Science doubles u.)
- Gun Component (2d4 u.)
- Magical Component (1d4 u.)
- Junk (1d8)
- Random Firearm or MEW (1 u.)

Description:

Robobrain was a solution for the problem of creating a robot with perfect artificial intelligence - by installing a brain of a pony or other sentient being as the central processing unit, housed in a preservative gel to not decay faster than the robot's metallic exterior.

While a feat of genius, and successful in its own right, the project had some limitations - of both moral and design variety. Brains had to be extracted from living or recently deceased individuals to have minor chances of malfunction, and even then the sudden change may have proven detrimental to the now-mechanical being's mental health. And when those malfunctions occurred, it proved to make the robobrains mad. No pun intended.

Robobrains roam the wastes aimlessly, seeking something to do - or patrol the areas where they were stationed as assistants and general help, working away still after all the years. Most models have been created with speakers attached, providing a way for the long-deceased owner of the brain-turned-CPU to speak his or her mind. That is, if they haven't suffered a major malfunction already.

Salamander

"Shortly after they were discovered, they became a household pet and guard lizard for many ponies, until that bugger decided to grow up and eat its owner. Needless to say, that fad died as quickly as it started. Some wager two ghoul merchants were behind the fad."

- Verdant Brink, hunter

Type: Mutated Animal

EXP: 150

STR 8, PER 4, END 8, CHA 3, INT 2, AGI 6, LCK 7

Sneak 40, Unarmed 65

HP 16, DT 1, AP 12, Size 1, Karma 0

Immunities Fire, Poison,

Resistances Cold +2 DT, Radiation 40%

Weaknesses none

Additional Combat Details:

Flame Spit (8 AP, 1/min): The salamander accurately spits a ball of flame against anyone threatening it. This attack affects an area equal to Tiny Splash template, and a maximum range of 20 meters (10 hexes). Anyone caught in the area must roll END -2 or suffer Burning status effect.

Bite (4 AP): Salamander tries to take a bite out of its opponent, dealing 3+(2) damage. The attack also has a base 20% chance to Cripple a limb.

Heated Scales: The salamander's hide is its main defensive mechanism, causing burns and pain to any aspiring predator - or hunter. After every Melee or Unarmed attack (not ranged) the attacker must roll END or suffer Burning status effect.

Fire Absorber: Salamanders are immune to damage from heat and fire, and each attack dealing fire damage heals them by 1 HP.

Creature Drops:

- Fire Resistant Hide (2 u. Survival doubles u.)
- Teeth (1d6, Survival doubles u.)
- Tail (1 u.)
- Junk (1d4)

Description:

Salamanders are lizards, capable of not only withstanding flames but able to spout them. Their characteristic red or orange hide, marked with dark spots along their back easily stands out amidst the remnants of green. While still in their hatchling stage, they're nothing more than a pest, and often an adorable one, being much smaller than your average pony while only managing to spout small flares. Once they grow to adulthood, however, the cuteness dissipates - easily towering over ponies, they defend their territory fiercely, often with their trademark flame spit. And they consider ponies to be part of their diet.

Salamanders are a common pest species in more arid environments of the Equestrian Wasteland, having taken a liking to various ruins left behind by ponies. Salamanders keep their hide in check by staying warm, and best way they achieve this is by creating small fires wherever they go. They do fight over same territory with geckos, and often where there is one species, the other is nowhere to be found. It is, however, often the salamanders who come out on top if the two species duke it out.

Shade

"A shadow etched forever onto a surface by the irradiated necromantic force of the Megaspell. Though the pony themselves have long since perished, their shadows continue onward, given "life" by the necromantic components of the spell. They're drawn to other shadows, both Shades and regular living ponies' shadows, hoping to merge with something living again, but usually end up consuming and corrupting instead. Some speculate that these shadows might be changelings' shadows rather than ponies'."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 250

STR 3, PER 8, END 6, CHA 6, INT 5, AGI 5, LCK 6

Sneak 70, Unarmed 65

HP 5, DT 0, AP 12, Size 0, Karma 0

Immunities Poison, Radiation,

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Enfeebling Touch (6 AP): Direct contact with Shade can cause the target to be Stunned. This attack also deals 4+(2) damage.

Corrupting Touch (8 AP): The Shade merges with the target's shadow, giving all of the target's actions +1 AP penalty. For each full round the Shade is merged in a shadow, the target removes a HP token, ignoring DT, on the Shade's turn. Shade can still attack targets other than the one it has merged with, with the Enfeebling Touch. Bright light, such as casting Light or complete darkness forces the Shade to abandon their target's shadow.

Painless: Shades feel no pain, and as such, do not suffer from Pain Thresholds.

Unliving: Shades pass through solid, non-magical objects like incorporeal ghosts.

Due to this, conventional, non-magical weapons do not harm them. Magical weaponry like MEWs and Spirits do. They also cannot be killed per say, but if their HP is brought to a 0, they are dispersed for a day after which they reform themselves.

Creature drops:

None

Description:

A living shadow. That's what common folk tell stories about. And for the same common folk, it's a description perfect enough. A shade's a moving, seemingly instinct-following shadow of truly vile necrotic nature. But it is in all manners of science, a non living entity.

Shades are - for the simplicity of words - born from the grand overdose of Radiation burning the victim's shadow, and part of it's essence by all knowledge gathered so far, permanently to the place they perished.

The terrors shades can bring upon even for the most careful of travellers, are nigh undetectable while lying in wait of even smallest of shadows, striking their prey both at the body, and at the shadow they cast. The touch of a shade feels like being burned with a frozen flame within but maybe more terrifying is the possibility of a shade taking possession of one's own shadow, and by that their whole body. And while shades are often limited to the place of their birth, the place can be anything from a small hut, to a huge mansion, a garden or a castle.

Slaver

"While I personally detest slavery, I would rather do trade with a slaver than try to bargain a deal with a raider... A slaver is usually interested in just two things, caps or slaves. And hope it is caps they currently have on their minds, or you might find some rather heavy jewellery adorning your neck the moment you let your guard down. If it is any help, at least they want you alive and relatively healthy."

- Merchant Silver Bit

Type: Sentient

EXP: 150

STR 6, PER 6, END 5, CHA 7, INT 6, AGI 5, LCK 6

Barter 70, Diplomacy 60, Firearms 60, MEWs 60, Melee 40, Sneak 60, Thaumaturgy 50, Unarmed 40

HP 15, DT Varies, AP 12, Size 0, Karma -25

Potency 10, Strain 20

Immunities none

Resistances Poison 10%, Radiation 5%

Weaknesses none

Additional Combat Details:

Wasteland Weaponry: Slavers can carry just about any weapon and armor imaginable, and most commonly wielding quality guns and MEWs, light armor, and occasional fancy clothes.

Slaver Magic: Slavers are composed of many different races.

- Earth Ponies: Branch of Charm and Sight
- Pegasi and Griffons: Agility and Charisma-based Maneuvers
- Unicorn: Enchantment and Perception Magic Schools
- Zebra: Alchemical Drugs and Talismans, Shaman; Spirit of Machines or Whispers

Greedy: Slavers can be swayed by money, after all, that's their primary motivation. Bartering with slavers with money or bribes has a bonus of +5 on Barter.

Organized: Slavers have hierarchy of leadership. They strike as units and groups of various sizes, usually under at least one spokesperson. Eliminating such spokesperson often leaves rest of the group at disarray and demoralized, giving them a -5 to all skill actions.

Creature drops:

- Main Weapon (1 u.)
- Additional Weapon (1 u.)
- Armor or Clothing (1 u.)
- Caps (100-200 caps, LCK doubles u.)
- Healing item or Chems (1, LCK doubles u.)
- Ammo, Firearms (2d6 u.)

Description:

Slavers aren't quite as mad as raiders, but more ruthless and greedy than mercenaries. Their main source of income and life is to rush into unsuspecting or undefended homes and settlements, take any or all ponies they can, and sell them away to some immoral wastelander who needs cheap workforce. Or something else.

As such, slavers are widely despised and often not bargained with by more civilized folks. This drives these "wasteland entrepreneurs" to stick to their own groups and form their own camps and fortresses. They do not, however, barricade themselves in, making excursions to the wastes to keep up their lifestyle and "might makes right" mentality.

Unlike Raiders who often act in a lackluster manner, slavers do keep a relatively tight hierarchy and organization for maximum efficiency and profit. Yet, one could say that a particularly nasty slaver is willing to sell anypony, friendships and history be damned.

Snake, Two-headed

"This is your garden variety viper turned huge and multi-headed, kind of like a tiny Hydra, except it doesn't have a lizard-like body. What it does have is poisonous fangs and in some cases, habit of squeezing their targets lifeless. What is worse is that all the heads are poisonous, making them more formidable than any would prefer. At least they make fantastic boots."

- Verdant Brink, Hunter

Type: Mutated Animal

EXP: 100

STR 6, PER 6, END 5, CHA 5, INT 3, AGI 6, LCK 7

Sneak 60, Unarmed 70

HP 8, DT 1, AP 10[†], Size 0, Karma 0

Immunities none

Resistances Poison 50%, Radiation 20%

Weaknesses none

Additional Combat Details:

Bite (3 AP): The snake takes a bite out of their target, dealing 2+(2) damage.

Venomous Spit (5 AP): Much like certain species of cobras, the two-headed snake can spit out venom from its fangs. This attack deals 2+(3) damage, and if it pierces DT, can cause the following effects, with 2x50% chance of poisoning:

- On skin-contact, this venom causes a burning sensation and painful blisters, giving the target Burning Status effect.
- If the venom gets to the eyes, the target suffers a penalty of -2 to PER when using eye-sight, as well as a -5 to Combat skills.
- Note: Snakes have either Venomous Spit or Constrict attack at their disposal

Constrict (5 AP): Some snakes have evolved to wrap themselves around their target and squeezing the life out of them. After a successful Grapple, for each round that the snake has constricted around a target, it deals 2+(3) damage. Once the snake lets go of the target, the target is inflicted with the Stun -Status Effect.

- Note: Snakes have either Venomous Spit or Constrict attack at their disposal
-

Escape Artist: When grappled, the snake begins to wriggle and writhe to break free, their scaly body and frantic movements easing the escape. Snakes gain a +2 to AGI and +10 to Unarmed when using Break Free -action, or when trying to Escape from the Grapple.

†Multiple Heads: Snakes can control their heads independently from each other, giving the creature more sources to attack with. The snake's AP is 10 + the number of heads it has. Snakes' heads suffer Crippled -status effect only if all heads are crippled.

Creature drops:

- Venom Sac (1 u.)
- Hide (1 u.)
- Teeth (6 u., Survival doubles u.)
- General Meat, raw (1 u. Survival doubles)

Snake, Three-headed

Type: Mutated Animal

EXP: 150

STR 7, PER 6, END 6, CHA 4, INT 3, AGI 6, LCK 7

HP 8, DT 1, AP 10[†], Size 0, Karma 0

Immunities none

Resistances Poison 50%, Radiation 20%

Weaknesses none

Additional Combat Details:

Bite (3 AP): The snake takes a bite out of their target, dealing 2+(2) damage.

Venomous Spit (5 AP): Much like certain species of cobras, the three-headed snake can spit out venom from its fangs. This attack deals 2+(3) damage, and if it pierces DT, can cause the following effects, with 2x50% chance of poisoning:

- On skin-contact, this venom causes a burning sensation and painful blisters, giving the target Burning Status effect.
- If the venom gets to the eyes, the target suffers a penalty of -2 to PER when using eye-sight, as well as a -5 to Combat skills.
- Note: Snakes have either Venomous Spit or Constrict attack at their disposal

Constrict (5 AP): Some snakes have evolved to wrap themselves around their target and squeezing the life out of them. After a successful Grapple, for each round that the snake has constricted around a target, it deals 2+(3) damage. Once the snake lets go of the target, the target is inflicted with the Stun -Status Effect.

- Note: Snakes have either Venomous Spit or Constrict attack at their disposal

Escape Artist: When grappled, the snake begins to wriggle and writhe to break free, their scaly body and frantic movements easing the escape. Snakes gain a +2 to AGI and +10 to Unarmed when using Break Free -action, or when trying to Escape from the Grapple.

†Multiple Heads: Snakes can control their heads independently from each other, giving the creature more sources to attack with. The snake's AP is 10 + the number of heads it has. Snakes' heads suffer Crippled -status effect only if all heads are crippled.

Creature drops:

- Venom Sac (2 u.)
- Hide (2 u.)
- Teeth (8 u.)
- General Meat, raw (1 u. Survival doubles)

Description:

In old days, snakes would vary between size of a hoof, and two griffons. However, small ones would often be highly venomous, while large snakes would constrict their prey to death. Sometimes the prey can be several sizes larger than the snake, yet the snake will swallow the prey whole. Known to be loners, snakes would only be seen in groups during mating seasons, and as mad collector's pets.

As Wasteland was born, magical residue would transform many snakes completely twisting the belief only small snakes are venomous, as snakes would be commonly the size of an average pony. But what truly remarkable happened, was the splitting; snakes would become twin - or even tri-headed, multiplying the killing force against the fresh prey of the Wastes.

Spider

“Professor Hottentotta was quite interested in the effects of balefire Radiation on the common spider. It seems that depending on their genes, different effects happen. Some grew in size into truly terrifying sizes, while some developed radioactive isotopes in their venom. Truly magnificent!”

- Acacia Honey, entomologist

Type: Mutated Insect

EXP: 50

STR 4, PER 8, END 5, CHA 4, INT 3, AGI 7, LCK 5

Immunities none

Resistances Poison 70%, Radiation 30%

Weaknesses none

Additional Combat Details:

Bite (4 AP): The spider's bite is dangerous as the wounds often begin to bleed. This attack deals 2+(2) damage, and can cause Bleeding- Status effect.

Web (5 AP): The spider entangles its target in a flung webbing, slowing them down. The target suffers a +1 AP to Movement actions. The range is 4/8/12.

Balanced: Due to having 8 legs, spiders have high balance. Spiders receive +20 to resist Trip, and they ignore up to 4 crippled legs' effects.

Wild Dance (5 AP, 1/min): The spiders are often colored with bright warning colors in a myriad of patterns. They can make an interpretive dance to cause a Minor Distraction.

Long Legs: Spiders are capable of crawling on many surfaces which other species struggle with, thus ignoring the +1 AP cost of Difficult Terrain.

Quick Runner: Spiders, despite their size, move at a terrifying speed, giving them +2 to their Initiative rolls.

Creature drops:

- Spider Legs (8 u.)
- Poison Gland (1 u.)

Spider, Giant

Type: Mutated Insect

EXP: 100

STR 6, **PER** 8, **END** 5, **CHA** 4, **INT** 3, **AGI** 7, **LCK** 5

Sneak 45, **Unarmed** 70

HP 11, **DT** 3, **AP** 13, **Size** 1, **Karma** 0

Immunities *none*

Resistances Poison 70%, Radiation 30%

Weaknesses *none*

Additional Combat Details:

Bite (4 AP): The spider's bite is dangerous as the wounds often begin to bleed. This attack deals 4+(2) damage, and can cause Bleeding- Status effect.

Web (5 AP): The spider entangles its target in a flung webbing, slowing them down. The target suffers a +1 AP to Movement actions. The range is 6/12/18

Balanced: Due to having 8 legs, spiders have high balance. Spiders receive +20 to resist Trip, and they ignore up to 4 crippled legs' effects.

Firm grip: Giant spiders have their Grapple Actions cost -1 AP less, and their STR is considered +1 higher when Grappling.

Wild Dance (5 AP, 1/min): The spiders are often colored with bright warning colors in a myriad of patterns. They can make an interpretive dance to cause a Medium Distraction.

Long Legs: Spiders are capable of crawling on many surfaces which other species struggle with, thus ignoring the +1 AP cost of Difficult Terrain.

Quick Runner: Spiders, despite their size, move at a terrifying speed, giving them +2 to their Initiative rolls.

Creature drops:

- Spider Legs (8 u.)
- Poison Gland (1 u.)

Description:

Spiders haven't changed much since the bombs fell - their most striking change being the large size they've grown to.

Depending on the spider, they may produce a web in shady corners or between two standing posts, burrow underground and stalk for any passing pray, or fill a large cavity in ruins with webs to call it home. Whatever the case, they're always hunting for meat. And ponies aren't an exception on their menu.

The magical radiation hasn't exactly calmed down these creatures either; they tend to attack any suitable prey, should they be hungry or feeling threatened. However, much like any animal, they're smart enough to flee when things get dicey for them.

Spiders are often loners by nature, with the exception of a female with an egg sac or mating season. And for the male spider, that can end in death as well.

Spider-Bot

"These small, eight-legged mechanical creatures stick to the ruins where their original owners placed them. These little rascals behave like violent animals, as they will pounce on anypony daring enough to explore the rubble they call home. I bet they were used as a defensive mechanism before the War. Thankfully, instead of lethal poison they use sedatives."

- Scribe Star Twinkle

Type: Machine

EXP: 100

STR 5, PER 6, END 7, CHA 4, INT 4, AGI 5, LCK 3

Firearms 45, MEWs 35, Sneak 50, Unarmed 40

HP 5, DT 2, AP 12, Size -2, Karma 0

Immunities Poison, Radiation, Taint

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Sedative Shot (8 AP, 1/min): The Spiderbot uses the injector located on its "mouth", shooting a sedative dart at its target (Firearms, range 10/20/30). This attack deals $1+(4)$ damage and may cause the target to become sedated, increasing all of the target's action costs by +1 AP.

Spark (5 AP, Unarmed): The Spider-bot attaches itself on the target's body with the small hooks it has on its eight feet and gives them a electric shock. This attack deals $1+(4)$ damage, and can inflict Stunned- status effect on the target.

Laser Beam (4 AP): Spider-bots are outfitted with a Magical Energy Pistol's mechanisms inside their robotic body and deals $1+(2)$ damage and ignores 1 DT.

Self-destruct: Upon reaching 0 HP, Spider-bot explodes with a Small Splash template centered on itself. Deals $2+(2)$ damage.

Combat Inhibitor: Spider-bots are equipped with a combat inhibitor, that help them separate friends from woes. Combat inhibitor can be hacked with Science to various ends, such as shutting down the robot. Destroying the combat inhibitor turns the Spider-bot against anything around them.

Painless: As a machine, Spider-Bot has no Pain Thresholds.

Creature drops:

- Scrap Metal, common (1d4 u., Mechanics doubles u.)
- Scrap ArcanoTech, common (1d4 u., Science doubles u.)
- Magical Component (1d2)
- Ammo - Gem Pack, (1d4 u., Luck doubles u.)
- Junk (1d4)

Description:

Spider-Bots resemble normal spiders a lot - they have eight mechanical legs for stability, and various sensors on the center part to detect movement and life. Over the years, the number of legs may have dropped by one or two, though that won't hinder their movement.

Spider-Bots were created as a cheap, mobile yet effective defense mechanism for various commercial uses. Mimicking their more lively cousins, Spider-Bots carry around an arsenal of sedatives to utilize on "trespassers", as well as shocking ability and ranged magical attack for the more troublesome "hoodlums".

Spider-Bots are programmed as purely defensive, and thus do not roam the wastes at all. Instead, they stay in and around the very building they were assigned to, protecting it from any danger, be it a mutated animal or scavenger.

Spore Carrier

"These accursed creatures are a plague onto the world; former ponies taken over by a violent, transformative pollen, changing them into mindless, if strangely pretty, flowering husks. Despite their vegetative looks they're lethal, flowers or not, either infecting you or just outright killing you as you walk past them unaware, as they camouflage into vegetation perfectly."

- Doc Holly

Type: Abomination/Mutated Plant

EXP: 150

STR 5, PER 4, END 7, CHA 4, INT 6, AGI 5, LCK 3

Melee 60, Sneak 40, Unarmed 55

HP 5, DT 2, AP 12, Size 0, Karma 0

Immunities Poison, Radiation

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Poison Barb (4 AP): Spore Carriers fire the barbs from their body at their foes (Melee, range 10/20/30), dealing 2+(2) damage. If this attack's damage overcomes DT, it has a 2x40% chance to cause a hallucination on its target for 3 rounds. If the target is poisoned, they will suffer Dazed- status effect.

Slasher (7 AP): Spore Carriers have long claw-like spikes on their feet. They can use these claws to slash at targets. This attack deals 3+(2) damage and causes Bleeding -Status Effect. This status effect doesn't refresh from multiple hits.

Self-destruct: Upon reaching 0 HP, Spore Carrier explodes with a Small Splash template centered on itself. Deals 2+(2) damage, and can infect all who are exposed to it by breathing its spores. If the target is infected, they suffer a AGI -1 and END -1 until the spores have been removed from their body. After a few weeks, the infected will perish and become a Spore Carrier themselves.

Camouflage: Spore carriers have double their skill value to Sneak when hidden in vegetation.

Organized: Spore Carriers have hierarchy of leadership. They strike as units and groups of various sizes, usually under at least one alpha. Eliminating a leader often

leaves rest of the group at disarray and demoralized, giving them a -5 to all skill actions.

Painless: With their host already dead, Spore Carrier has no Pain Thresholds.

Creature drops:

- Abomination flesh piece (1d2 u, Survival doubles u.)
- Spore plant Sap (1d4, Survival doubles u.)
- Green Herbs (1d8 u.)
- Blue Herbs (1d4 u.)

Description:

One of the more freakish mutations the Wastes has to offer, the Spore carrier is a pony overtaken by a transformative pollen. Though the pony itself is long dead, the flower infested corpse shambles around with some strange semblance of pony behavior. Once the Spore carrier itself dies - through age or wasteland weaponry - it may sprout a new Spore Plant to continue the cycle.

Spore carriers, much like ponies, are social creatures that form tight groups. There is usually a stronger alpha to lead a herd of spore carriers, sometimes called "Spore Carrier Princess". Due to this herd-mentality, they tend to attack in groups as well.

Spore carriers are ambush-predators, hiding in vegetation until the victim has walked close enough for a quick surprise attack. When Spore carriers attack, they use both their long claw-like spikes and poisonous barbs to render the victim unconscious. The Spore carrier will then release the same transformative pollen on the victim, who will, if left untreated, turn into a Spore carrier themselves.

Generally, this transformation takes a few weeks, with first symptoms showing up within a few days. The symptoms include shortness of breath, dizziness, orange spots appear on the body and finally, the victim's body starts to gain bark-like properties, before death takes them.

Thankfully, there is a cure for the affliction; a potion made of the Spore plant's sap and few Green herbs boiled in clean water takes care of the pollen when digested for every day about a week.

Spore Plant

"Spore Plant is the sole reason we have Spore Carriers. This foolish experiment gone horribly wrong has caused untold damages to various settlements. This deliberately mutated swamp plant now infects others with an infectious pollen that will eventually turn the poor victim into a Spore Carrier, or kill them. If you can keep from inhaling the spores, you're relatively safe."

- Doc Holly

Type: Mutated Plant

EXP: 150

STR 4, PER 6, END 7, CHA 2, INT 1, AGI 4, LCK 6
Melee 60, Sneak 20, Unarmed 60

HP 6, DT 1, AP 12, Size -1, Karma 0

Immunities Poison, Radiation

Resistances +2 END vs Burning- status effect

Weaknesses none

Additional Combat Details:

Poison Barb (4 AP): Spore plants fire the barbs from their body at their foes (Melee, range 20/40/60), dealing $3+(2)$ damage. If this attack's damage overcomes DT, it has a 2x40% chance to poison the target and cause them to become aggressive. If the target is poisoned, they're inflicted with Enraged- status effect.

Pollen Cloud (8 AP, 1/min): The Spore plant releases its spores should a target venture adjacent to it. However, it takes some time for the pollen to gather inside the plant. This attack has 2x60% chance of poisoning their target with the spores. If a target has been infected, they suffer from AGI -1 and END -1 until the spores have been removed. After a few weeks, the infected will perish and become a Spore Carrier.

Stalk Sweep (6 AP): The spore plant is more hardy than it lets on. It uses its long stalk to knock ponies off their hooves, almost like a flail. This attack deals $2+(3)$ damage and can knock opponents prone with a successful Opposed Melee or Unarmed roll.

Rad Healing (8 AP, 1/min): The spore plant may choose to discard 2 Rad Tokens, and replenish an equal amount of HP Tokens and/or Crippled Conditions, if any are present.

Immobile: Spore plants are rooted in place, so they have no movement speeds.

Creature drops:

- Green Herbs (1d4 u. Survival doubles u.)
- Red Herbs (1d4 u. Survival doubles u.)
- Blue Herbs 1d2 u, Survival doubles u.)
- Spore Plant Sap (1d6 vials, Survival -20 doubles u.)

Description:

A result of a biological experiment gone horribly wrong after - or before - the Great War, the Spore Plant has become a nuisance in the Wasteland. Its method of multiplying relies on its spores getting inhaled by a passing being, who then slowly turns into a Spore Carrier. The Spore Carriers act also as a defending horde against anyone who dares too close to the Spore Plant. It is common to find one with the other nearby.

Spore plants are rooted in place, thus they cannot pursue. However, they can use toxic barbs to shoot at far-away targets, which compels the poisoned target to become enraged. This is all in purpose of luring the victim closer for eventual pollination.

These swamp plants are quite unique with how well they fare with radiation, as they are actually healed by it. Thus the Spore Plants thrive in damp swamps contaminated by fallout, and may occasionally be found in slightly flooded buildings.

There is a cure to the infection caused by the Spore Plant; a potion made of the Spore plant's sap and few Green herbs boiled in clean water takes care of the pollen when digested for every day about a week.

Sprite Bot

“Unlike their biological cousins, the floating Sprite Bots aren’t out there to eat everything out of existence. Quite the opposite - they are extremely useful robots. They’re used for a myriad of things, like moving radio broadcasters, courier tasks and personal defense to list a few. Frankly, I’d construct one for myself in a heartbeat if I had all the computing bits!”

- Scribe Star Twinkle

Type: Machine

EXP: 50

STR 5, PER 7, END 5, CHA 6, INT 5, AGI 5, LCK 4
MEWs 60, Sneak 60

HP 7, DT 2, AP 12, Size -2, Karma 0

Immunities Poison, Radiation, Taint

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Courier (6 AP): Due to their programming allowing them to be used as couriers, they can sometimes put this into use in the battlefield. Sprite Bots can attempt to shoot at the enemy’s weapon to disarm them, ignoring -10 penalties to the Called shot in question. If the Sprite bot successfully disarms a target, they can take the item and start to carry it further away from the target. However, this action will give the target an Attack of Opportunity.

Plasma Pistol (4 AP): Equipped for combat in longer ranges, Sprite bots have a built-in plasma pistol in their robotic body. This attack deals 2+(3) damage and ignores 1 DT, with ranges of 20/40/60.

Alert Fanfare: Sprite bots play a catchy little jingle when they spot an enemy, alerting nearby creatures to a threat, giving their allies +1 to PER to spot sneaking enemies.

Radio Jingle (6 AP): Sprite bots can use their internal radio-system to distract their enemies. By suddenly turning on their radio broadcast on whatever channel it happens to be in, they can cause all targets in a Small Splash template to be Distracted.

Hovering: Sprite bots hover in the air, with a movement speed of 1 AP for 2 meters (1 Hex).

Combat Inhibitor: Sprite Bots are equipped with a combat inhibitor, that help them separate friends from woes. Combat inhibitor can be hacked with Science to various ends, such as shutting down the robot. Destroying the combat inhibitor turns the Sprite Bot against anything around them.

Painless: As a machine, Sprite bot has no Pain Thresholds.

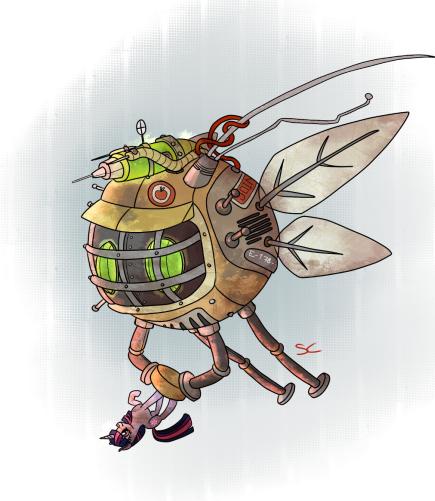

Creature drops:

- Scrap Metal (1d4 u, Mechanics doubles u.)
- Scrap Electronics (1d4 u, Science doubles u.)
- Magical Component (1 u.)
- Ammo - MFC
- Junk (1d4)

Description

The Sprite-Bots are basically hovering little balls of metal, closely resembling the unmuted parasprite in exterior view. Their exact original use is unknown, but all models are equipped with a speaker, microphone and radio antenna, allowing for listening and sending messages on radio waves, as well as some sort of self-defence weapon, usually small-caliber firearm or magical weaponry. These features make the Sprite-Bot a great companion for those with knowledge on robotics - that is, if they find one that isn't either hostile or already in use by some wastelander broadcasting annoying music.

Because Sprite-Bots do not usually have a defense protocol assigned to a specific building, it is common to find a Sprite-Bot wandering about in the Wastes. Due to at least seeming to be a civilian contraption and one never meant for active combat, Sprite-Bots are rather easy to hack and gain access to, when compared to a nigh-invulnerable Ultra-Sentinel.

Steel Ranger

"You don't get trouble from Steel Rangers as long as you keep your head low and your wares low-tech. Unless the customer has their Power Armor-helmeted head too far up their arses and they see fit to bully you for kicks. Thankfully, I hear a sensible few decided to leave the faction and help the common pony instead of robbing liberating anypony with anything nigh better than a peashooter for a weapon."

- Merchant Silver Bit

Type: Sentient

EXP: 500

STR 7, PER 6, END 8, CHA 5, INT 6, AGI 4, LCK 7

Barter 50, **Explosives** 50, **Intimidation** 70, **Mechanics** 60, **MEWs** 70 **Science** 70, **Thaumaturgy** 60,

HP 18, **DT** 0[†], **AP** 12, **Size** 0, **Karma** Varies

Potency 15, **Strain** 25

Immunities none

Resistances Poison 10%, Radiation 5%

Weaknesses none

Additional Combat Details:

†Wasteland Weaponry: As sentient creatures, Steel Rangers sport a myriad of weaponry, and take great liking in high-end magical weapons. Their patrols wear Power Armor exclusively, but Steel Stranger Scribes can be seen wearing lighter armor.

Steel Ranger Magic: Being ponies, Steel Rangers have access to magic. Pegasi are practically non-entity in the Steel Ranger ranks, so Earth Pony and Unicorn magic is most common.

- Earth Ponies: All Branches
 - Unicorn: Conjunction, Protective and Medical Magic Schools
-

Abomination Hunter: Due to their high-caliber weaponry and armor, most Steel Rangers are well-equipped to fight even the most horrid things the Wasteland has to offer. They gain a +10 to Combat skills when targeting Abominations, including sane Ghouls.

Greedy: Steel Rangers can be swayed by technology, which is often their primary goal. Bartering with Steel Rangers with rare technology, has a bonus of +5 on Barter.

Organized: Steel Rangers have hierarchy of full military leadership. They strike as units and groups of various sizes, usually under at least one commander. Eliminating such a leader often leaves rest of the group at disarray and demoralized, giving them a -5 to all skill actions.

Creature drops:

- Main Weapon (1 u.)
- Additional Weapon (1 u.)
- Power Armor (1 u., cannot be used without penalties without *Power Armor training*)
- Skill Book (1 u. LCK -20 to obtain)
- Ammo - Gem Pack or MFC (1d6 u. Survival doubles u.)

Description:

The Steel Rangers are a technologically-advanced faction of the remnants of Equestrian military and two Ministries, composed of Earth Ponies and Unicorns. One can easily identify a Steel Ranger from the distinctive form of high-tech full-body armor, noted as Power Armor.

While originally the Steel Rangers' oath was to the protection of Equestrian populace, their goals have shifted to the acquisition and research of advanced pre-War technology in the hopes they may duplicate it. This drive for technology adds to their immersive arsenal of weaponry - often making encounters with them highly risky if one has something the Rangers are after.

The Rangers' command structure is hierarchical and extremely rigid. A commanding officer can only issue commands to their direct subordinate, and a commanding officer's orders should not be questioned. At the top of every chapter of Steel Rangers sits an Elder, whose words are final.

Star-Spawn

"Star-Spawns... I think zebras think they're some kind of horrid demon, and most ponies would agree, due to how destructive they can get even on accident. Though their body is composed of stars and they're nearly invisible, they have some real power behind their seemingly ethereal appearance. Don't go against one unless you know what you're doing..."

- Verdant Brink, Hunter

Type: Non-Mutated Animal

EXP: 1500

STR 12, **PER** 6, **END** 10, **CHA** 3, **INT** 5, **AGI** 6, **LCK** 8

Sneak 80, **Unarmed** 60

HP 22, **DT** 6, **AP** 13, **Size** 4, **Karma** 0

Immunities Radiation, Taint

Resistances Poison 90%

Weaknesses none

Additional Combat Details:

Destroyer (4 AP): Star-Spawn can and often do remove covers and obstacles from the battlefield with a single strike of paw; this action affects Large Burst Area and destroys any Obstacle with 3 or less DT. Obstacles that provide more DT have their DT halved (rounded down).

Roar (8 AP): Star-Spawn roar sends out a shockwave strong enough to send opponents stumbling back, knocking them prone in a Huge Splash template. Targets of this attack may try to remain upright with a -2 STR roll.

Slow Stomp (8 AP): Star-Spawns can cause terrible injury with a mere step. A Star-Spawn's Slow Stomp deals $6+(4)$ damage on a Small Splash template. Any target underneath may roll AGI -1 to get out of the way in time.

Tremor (12 AP): Star-Spawn crashes all its gargantuan size to the ground, often simply by sitting down. This action takes 3 turns, 1 turn to sit down, and 2 turns to complete the trembles. Every grounded character within 100 meters (50 hex) must succeed a STR or AGI roll with -3 penalty or be knocked prone, on both turns of the trembles. Any character within a Large Splash Template will take $5+(2)$ damage, and additional (5) if knocked prone due to grumbling ground practically crushing its victim.

Invisible Limbs: Star-Spawn limbs are nearly invisible, raising the penalty of Called shots to its limbs by 20.

Creature drops:

None

Description:

Star-Spawn is one of the most threatening creatures the Equestrian Wasteland has ever seen. Often doing terrible damage to its surroundings simply by walking through a settlement or by sitting down to take a nap.

Gargantuan in size, these star-patterned bears hail from the pre-war Equestrian Ursa Major, a mythological bear with a see-through body of stars. In fact, the changes to this creature are nearly non-existing; aside from the slight increase to size and more see-through body, little has changed in the Star-Spawn. These creatures are quite difficult to take down due to their nearly invisible body, and their size and strength.

Linked to many zebra myths, these bears are the ultimate ill omen for a zebra tribe, as their star-patterns are seen as something beyond evil incarnate, feared by many. Thankfully, star-spawn territories can easily span half a country, meaning that it is quite rare to run into one.

Star-Spawn are solitary creatures, but their females are noticeably caring mothers, caring for their offspring well beyond their infant years. The cub is a curious thing, eventually beginning to wander off from their nest and usually end up in some poor settlement when taking a stroll.

Tankbug

"I saw, no kidding, a millipede the size of a bus, happily crawling forward. Truly, I am happy I am here in the research labs, able to watch it from afar. It seems quite docile, though I did see it trample a couple of... I don't know how to call them? Survivors I guess? That tried to get on its path. The resulting remains were a lot like a tank had ran them over. I think I'll call this one a Tankbug."

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 250

STR 8, PER 4, END 7, CHA 3, INT 2, AGI 3, LCK 5

Sneak 30, Unarmed 60

HP 12, DT 4, AP 11, Size 2, Karma 0

Immunities Poison

Resistances Radiation 20%

Weaknesses none

Additional Combat Details:

Trample (8 AP): Tankbugs can charge at their foes, trampling them under their weight. Trample causes $3+(2)$ damage, as well as additional $+(1)$ damage for each size category smaller than Tankbug.

Acidic Puddle (5 AP): Tankbugs secrete a fluid when threatened, causing acidic puddles to form near it. These puddles deal $3+(3)$ damage and can cause a Burning- status effect.

Curl (4 AP): Tankbug curls into a ball-like shape, further protecting itself from harm, while remaining stationary. Tankbug's DT is increased by 2 when curled up.

Thousand Legs: Due to tankbugs being mutated millipedes, their large number of legs have rendered them immune to Crippled effects from legs, unless one manages to cripple all of their legs, ranging from 20 to nearly 50.

Perfect Balance: Due to its numerous legs, Tankbugs cannot be Tripped.

Woodlands Stride: Tankbugs maneuver well in the dead forests they call home, ignoring the +1 AP cost of Difficult Terrain.

Creature drops:

- Tankbug Chemicals (1-2 bottles worth, Survival doubles u.)
- General Meat (1d8, Survival doubles u.)

Description:

Tankbugs are one of the few creatures in this book that do not usually intend to do harm on sentient creatures, as they are strictly herbivores, eating mostly rotting plant material. However, their massive, bus-sized bodies can cause harm on accident, as they can run ponies over. In addition, they secrete chemicals when they feel threatened, but these chemicals are often easy to avoid, due to forming in pools. These chemicals can burn on skin-contact, have a foul smell and can stain the coat and fabric of a pony a shade of purple. Due to these chemicals staining properties, Tankbug secretions have been used to dye clothes in Wastes, for all those two equines that care about such trivial matters.

Tankbug shells are exceptionally hardy, making them rather difficult to kill. Due to this, some folks use Tankbug shells as makeshift barriers and lodging.

Thug

"Ah, the common thug, also known as degenerate and hoodlum. Could be anypony or -griffin turned desperate or drunk enough to take a swing at their neighbor. Of course, some thugs are used by local gangs to do their dirty work, in exchange for food and drink, and they will rarely hesitate to hurt you for their own benefit. A good threat from the business end of a shotgun usually takes care of that."

- Merchant Silver Bit

Type: Sentient

EXP: 50

STR 7, PER 5, END 6, CHA 5, INT 6, AGI 6, LCK 6

Barter 55, **Diplomacy** 55, **Firearms** 45, **Melee** 50, **Sneak** 40, **Thaumaturgy** 45, **Unarmed** 50

HP 11, DT 0, AP 13, Size 0 Karma Varies

Potency 5, **Strain** 15

Immunities none

Resistances Poison 10% (20% if Zebra), Radiation 5%

Weaknesses none

Additional Combat Details:

Wasteland Weaponry: Thugs tend to, depending on the situation, favor melee and unarmed or improvised weapons, but seeing one with a gun isn't unheard of. Most thugs favor pistols and revolvers for their concealment factor. They usually equip regular clothes or light armor.

Thug Magic: Being ponies, griffons and zebras, Thugs have magic available to them, though they usually aren't very adept at using their innate skills.

- Earth Ponies: Branch of Sight
 - Pegasi and Griffons: Endurance-based Maneuvers
 - Unicorn: General and Conjuration Magic Schools
 - Zebra: Alchemical Drugs and Talismans, Shaman; Possession Spirit
-

Coward: Thugs are not necessarily the most capable fighters, and tend to run away at the first sign of the fight going south. Thugs have a -2 on INT to resist intimidation tactics. When they reach Pain Thresholds, there is a chance they will flee as if intimidated.

Substance Abuser: Some thugs have a penchant for drug and alcohol abuse and can use them even during fights, especially combat drugs such as Dash. But this is also their weakness, as they can be persuaded to leave in exchange for drugs or alcohol, or caps to get them.

Creature drops:

- Main Weapon (1)
- Armor or Clothing (1)
- Random Chem (1d2, LCK doubles u.)
- Random Alcohol (1, LCK doubles u.)
- Junk (1d6)

Description:

Thugs are the generic name given to the more downtrodden and undesirable elements of post-apocalyptic city life, lingering on street corners and alleys to either beg for a cap or two - or utilize whatever they scavenged from a dumpster to rob an unsuspecting traveler in order to score the caps for their next Dash rush.

While desperate, they aren't dumb. They may band together to bring down more dangerous opponents - as the potential rewards are bigger - but at the same time they value their life more than anything, and if things go sour they flee the scene rather quickly. Then again, one can get on their good side with a donation of caps or the chem of their desire, and thus may provide information on the settlement they roam in.

Many bigger and generally worse criminal organizations often employ thugs to do their dirty work.

Timberwolf

"Timberwolf are an age-old creature found in many places long before the war, and they're just as dangerous now as they were then. These bark-covered canines -no pun intended- are resistant to many kinds of magic and the magical fallout that has doomed many species of our wonderful Equestria."

- Verdant Brink, Hunter.

Type: Non-Mutated Animal

EXP: 200

STR 7, PER 7, END 7, CHA 5, INT 6, AGI 4, LCK 6
Sneak 50, Unarmed 60

HP 17, DT 2, AP 12, Size 1, Karma 0

Immunities Poison, Radiation

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Bite (4 AP): Timberwolves are still canines in their basic instincts, which is why their main attack is to go for the jugular. This attack deals $3+(3)$ damage.

Slam (4 AP): Timberwolf charges at their target, gaining +10 to Unarmed for their next attack. This attack deals $2+(4)$ damage, and can knock a target prone.

Magic Resistant: Unlike most non-mutated creatures, Timberwolf is made from twigs held together by raw, eerie magic. Due to this, they're quite resistant to magical attacks; spells that target the Timberwolf have -20 to Thaumaturgy. In addition, MEWs DT Reduction doesn't work on Timberwolves.

Noxious Odors: The Timberwolf emits a foul stench, causing anyone adjacent to it to suffer a 2x40% chance of poisoning. When successfully poisoned, the target suffers a -1 to a random SPECIAL.

Reassembly: Crits cause a Timberwolf to fall into pieces, leaving them alive but unable to act. However, they can reassemble themselves in 3 turns.

Unify: Timberwolves are magical constructs made of wood, so they can increase their Size by merging together to create what is known as Timberwolf King. A larger Timberwolf has a +5 to Unarmed, -5 to Sneak and +2 HP for each size category it grows in size. A minimum of three Timberwolves are needed to go up in size category.

Creature drops:

- Construct Orb (1 u., Thaumaturgy or Survival -20 to obtain)
- Green Herbs (1d4 u, Survival doubles u.)
- Blue Herbs (1d4 u., Survival doubles u.)
- Black Herbs (1d2 u., LCK doubles u.)

Description:

It is hard to determine what exactly a Timberwolf is; outwardly, they look like logs and twigs forming a vaguely canine shape, towering over most ponies. Their eyes are little more than green shining light. Most have came to the conclusion that timberwolf is a construct of some sort; mundane materials -wood, in this case- bound to a form by raw magic. It is unknown if they form naturally or have been created by a powerful wizard.

Due to timberwolves' magical nature, they boast some rather unique talents rarely seen in any other creature. When the timberwolf falls apart they can reassemble themselves anew, and they can join forces with other timberwolf to create a larger version of a timberwolf. Perhaps due to the unique magic they possess they've developed a resistance to magic, likely part of the reason why Radiation has no effect on them.

Timberwolves are by nature aggressive creatures, chasing ponies that accidentally end up in their forest-territories. However, they are quick to flee should the intruder prove to be too strong to handle by the pack. A timberwolf pack is relatively small, only ten or so individuals, that further splinter into smaller hunting and scouting groups of 2-3 individuals.

Though most ponies have not gained the chance to observe timberwolves in their natural habitat, it can be theorized that their social behavior resembles those of feral dogs and wolves.

Triggerbloom

"This mutated plant is a vicious one, shooting toxic -or in case of Whitetail Woods variant, radioactive- spikes from its tantalizingly colorful flowers that only open up when the plant detects prey. This is why one rarely notices the Triggerbloom before it is too late and the toxins begin to paralyze the poor sod. Not even flying creatures are safe from it."

- Doc Holly

Type: Mutated Plant

EXP: 100

STR 4, PER 6, END 5, CHA 5, INT 3, AGI 8, LCK 3

Melee 65, Sneak 80, Unarmed 50

HP 8, DT 1, AP 14, Size 0, Karma 0

Immunities none

Resistances Poison 90%, Radiation 60%

Weaknesses none

Additional Combat Details:

Stunning Dart (5 AP): Triggerbloom shoots a poisonous thorn from their brightly colored flower (Melee, 40/80/160) dealing 2+(3) damage, and ignores 1 DT. If successfully hit, the target may suffer a poisoning that gives them Stunned- Status Effect with 2x60% chance.

Sneaking Root (5 AP): Triggerbloom have some control over their roots, capable of directing them to appear out of the ground and Trip the target next to them.

Immobile: Although triggerblooms can move their roots to some degree, they do not migrate and stay in one spot their entire lives.

Anti-Air: Triggerblooms get a +5 to Melee when targeting airborne critters.

Creature drops:

- Thorn (1d6 u., Survival doubles u.)
- Flower (1d4 u. Survival doubles u.)
- Green Herbs (1d6 u., Survival doubles u.)
- Red Herbs (1d4 u, Survival doubles u.)
- Pollen (1d6 u, Survival doubles u.)

Pale Triggerbloom

"Pale Triggerbloom is the variant of Triggerbloom that grows in Whitetail Woods almost exclusively, though they have been spotted in other ridiculously irradiated areas, such as some of the balefire craters. How the plants survived of the resulting sonic boom and intense heat is anypony's guess."

- Doc Holly

Type: Mutated Plant

EXP: 200

STR 4, PER 6, END 5, CHA 5, INT 3, AGI 8, LCK 3

Melee 75, Sneak 80, Unarmed 60

HP 13, DT 2, AP 14, Size 0, Karma 0

Immunities none

Resistances Poison 90%,

Weaknesses none

Additional Combat Details:

Radiant Dart (5 AP): Pale Triggerbloom shoots a strong radiation filled thorn from their shining white flower (Melee, 40/80/160) dealing 2+(3) damage, and ignores 1 DT. If successfully hit, the target may suffer radiation poisoning, that gives them 1 Rad Token with 3x60% chance.

Sneaking Root (5 AP): Pale Triggerbloom have some control over their roots, capable of directing them to appear out of the ground and Trip the target next to them.

Rad Healing (1/min, 8 AP): Pale Triggerbloom may choose to discard 2-5 Rad Tokens, and replenish an equal amount of HP Tokens and/or Crippled Conditions, if any are present.

Rad Emitter: Pale Triggerblooms passively release radiation from themselves within a Small Splash Template. Anyone caught within gain 2 Rad Tokens with 2x40% chance.

Immobile: Though Pale Triggerblooms can move their roots to some degree, they do not migrate and stay in one spot their entire lives.

Anti-Air: Pale Triggerblooms get a +10 to Melee when targeting airborne critters.

Creature drops:

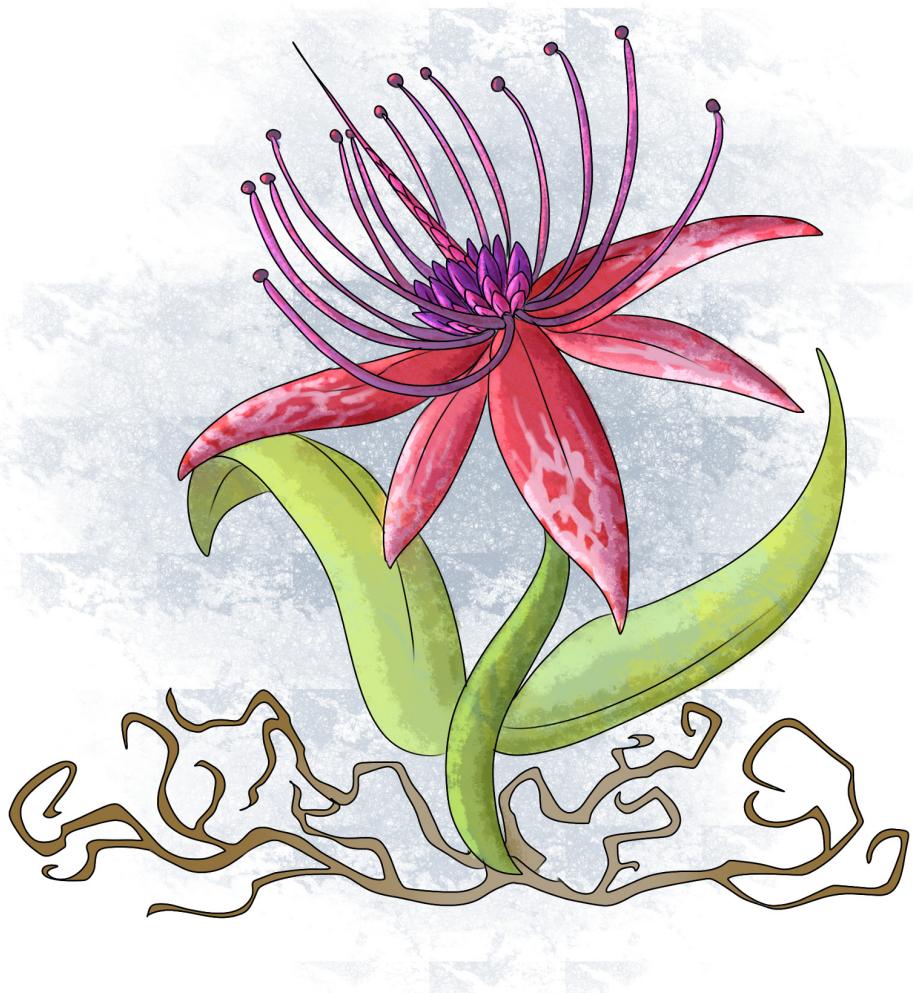

- Irradiated Material (Irradiated Material, 2-4 u. Survival doubles u.)
- Thorn (1d6, Survival doubles u.)
- Blue Herbs (1d4 u., Survival doubles u.)
- White Herbs (1d4 u., Survival doubles u.)

Description:

Triggerblooms are mutated vegetation, having grown to larger size and much more prominent. The colours of their blooming flowers vary, but they work the same way - to thwart any possible threat to their existence, they shoot darts filled with poison against the threat. If the threat gets too close, they shift their far-spanning roots and try to get them to the ground, where they can finish them off with their darts more easily.

Triggerblooms thrive in areas with enough moisture, sunlight and radiation to satisfy their needs. These are often areas where there's vegetation to begin with, and preferably above ground. Underground Triggerblooms are a rarity, but not unheard of - provided they've sprouted near a waste barrel.

The more irradiated variant, Pale Triggerbloom differs from the ordinary triggerbloom with their pale, subdued color palette, compared to the regular triggerbloom's myriad of vibrant colors. The Pale Triggerbloom is an extremely hardy plant, living in such an irradiated areas that rarely cater to any life at all. This means that they have very small amount of predators, letting them to grow in peace.

Turret

"Ah, Auto-Defense Turret System Mk III. The dipolar enchant protocols within are quite interesting... ah, less babble, okay. Turrets, as they're commonly called, are stationary placements that will track and shoot either bullets or magic at you, depending on the type. Personally, I suggest not prying one open without fully deactivating one. I've seen the results and it is not pretty."

- Scribe Star Twinkle

Type: Machine

EXP: 50

STR 3, PER 7, END 4, CHA 2, INT 4, AGI 6, LCK 2

Explosives 60, Firearms 60, MEWs 60, Thaumaturgy 40[†],

HP 8, DT 3, AP 13, Size -1, Karma 0

Potency 5[†], Strain 10[†]

Immunities Poison, Radiation, Taint

Resistances none

Weaknesses none

Additional Combat Details:

Variable Weaponry: Most Turrets are equipped with a single ranged weapon such as a machine gun, a laser rifle, or a grenade launcher. Weapon stats are dependent on the choice of a weapon from Wasteland Wares.

Immobile: Turrets can be either mounted onto walls or the ceiling, or stand on a tripod, but they are entirely stationary except for their rotating weaponry.

†Turret Matrix: Some turrets have a built-in matrix to enhance their usefulness. These turrets have access to following spells; Target, Remake, Failsafe and Shield.

Combat Inhibitor: Turrets are equipped with a combat inhibitor, that help them separate friends from woes. Combat inhibitor can be hacked with Science to various ends, such as shutting down the robot. Destroying the combat inhibitor turns the Turrets against anything around them.

Painless: Due to turrets being a machine, they are unable to feel pain and as such, do not suffer from Pain Thresholds.

Tracking System: Turrets track their targets, but crippling this part - a blinking light on their upper section - with a Called Shot with a penalty of -40 causes the

turret to suffer a Minor Distraction until repaired. Turrets with *Turret Matrix* can repair this condition with Remake-spell, costing 4 AP and 2 Strain.

Creature drops:

- Scrap Metal, Common (1d4 u. Mechanics doubles u.)
- Scrap ArcanoTech, Common (1d2 u. Mechanics doubles u.)
- Scrap ArcanoTech, Rare (1 u.)
- Gun Component (1d4 u.)
- Junk (1d4 u.)
- Ammo (2d6 u.)

Description:

The cheapest yet most versatile of defense mechanisms, turrets aren't just pre-War technology - often one can find them installed around bases and settlements for protection, in either salvaged or scrap-built forms. They easily provide fire in distinct areas, and with the rotational capacity can fire in almost any direction. However, their stationary nature proves to be their weakest point, as one can either bypass the turret or disable it with ease once knowing its location.

Turrets can be found almost anywhere where there's requirement for passive protection. These include wasteland settlements and pre-War ruins.

Twittermite

“These tiny, winged insects are quite adorable with their large compound eyes and cute little lightning antenna they use to zap you with. Alone, they’re really quite harmless, little more than a common pest, but with a swarm, they’ll cause thunderstorms most pegasi would be impressed with. And all that from a bunch of cute little tiny buggies. Though we have not quite yet found out how they’re so resistant to radioactivity, but they could be a key to repelling the magical fallout currently falling off the sky.”

- Acacia Honey, Entomologist

Type: Non-Mutated Insect

EXP: 100

STR 3, PER 6, END 4, CHA 5, INT 3, AGI 6, LCK 5

Sneak 40, **Unarmed** 60

HP 5, DT 0, AP 13, Size -3, Karma 0

Immunities Radiation, Taint

Resistances Poison 70%,

Weaknesses none

Additional Combat Details:

Lightning Bolt (6 AP): Twittermite shoot their generated electricity at their targets, dealing 1+(1) damage, and may inflict Stunned -Status Effect.

Flying: Twittermites move by flight, moving with erratic movements. Their flight speed is 4 meters (2 Hex) for 1 AP.

Growing Swarm: Twittermites are a rather special swarm in that they tend to drift further apart from each other, growing the size of their swarm from a single hex forward. This growing of sizes happens every 3 turns, with each drifting apart giving a +(2) dice to their attacks. Due its large size of swarm, explosives and other similar Area of Effect attacks consider Twittermites to be Size 0.

Quick Flier: Twittermites are fast, and due to this they get a +2 to their Initiative rolls.

Creature drops:

Twittermite Wing (2 u. + LCK)

Description:

Twittermites are very small insects that instinctively swarm to each other. As they generate a weak electric current when alone, this same electric current is further amplified when large numbers of Twittermites are within a distance of each other. They often drift further apart to better generate the electricity, which they then launch as a lightning bolt.

Twittermites usually use their lightning bolts as defense rather than offense as they usually feed off of electricity; due to this they can often be seen swarming electrical equipment or latching onto creatures for their static electricity.

Twittermites are strangely resistant against poisons and the mutating effect of Rads. This is potentially the result of both their diet and their electrically charged bodies frying dangerous chemicals.

Twittermites are mostly benign creatures, willing to leave a pony alone if they are not disturbed.

Ultra-Sentinel

“The pinnacle of pre-War robotics, these hulking beasts were likely used to protect places where security was the first priority. While not exactly self-aware and thinking, their magi-flux processors are used for more... destructive protocols. You see, these robots often carry most destructive weapons created before the War, and they will liberally use them to dispose trespassers. Effective, security wise, I must admit.”

- Scribe Star Twinkle

Type: Machine

EXP: 800

STR 9, PER 8, END 7, CHA 3, INT 5, AGI 4, LCK 4

Explosives 70, Firearms 70, MEWs 70, Thaumaturgy 40[†],

HP 16, DT 6, AP 12, Size 1, Karma 0

Immunities Poison, Radiation, Taint

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Minigun (7 AP): Ultra-Sentinels are equipped with a powerful H&K MGat-39 “Mini Gun”. It acts like its Wasteland Wares -counterpart, but Ultra-Sentinel doesn’t need to use AP to reload.

Missile Launcher (1 / 2 turns, 8 AP): Ultra-Sentinel has a vast storage of small missiles it can launch with their mounted missile launcher. It acts like its Wasteland Wares -counterpart, with the exception that Ultra-Sentinel doesn’t need to spend AP to reload.

Gauss Shotgun (5 AP): In terms of close combat, Ultra-Sentinels are equipped with a ”Gauss Shotgun” which acts as its Wasteland Wares -counterpart, with the exception that Ultra-Sentinel doesn’t need to spend AP to reload.

Self-destruct: Upon reaching 0 HP, Ultra-Sentinel explodes with a Large Splash template centered on itself. This explosion deals 4+(5) damage.

Combat Inhibitor: Ultra-Sentinels are equipped with a combat inhibitor, that help them separate friends from woes. Combat inhibitor can be hacked with Science to various ends, such as shutting down the robot. Destroying the combat inhibitor turns the Ultra-Sentinel against anything around them. However, Ultra-Sentinels

are built with the Combat Inhibitor partially hidden, Called Shots targeting the Combat inhibitor suffers a -10 additional penalty.

Painless: As a machine, Ultra-Sentinel has no Pain Thresholds.

Creature drops:

- Scrap Metal, Rare (1d6 u., Mechanics doubles u.)
- Scrap ArcanoTech, Rare (1d4 u., Mechanics doubles u.)
- Gun Component (2d4 u.)
- Magical Component (2d4 u.)
- Ammo (4d10 u.)

Description:

Robronco's finest creation to both civilian and military markets, the Ultra-Sentinel looks like an armored pony on wheels, with massive weapons attached to its metallic sides. They are, however, much bulkier than any other robot, easily filling small corridors.

Ultra-Sentinel's primary goals are clear - they will keep the area secure, checking each and every passerby for identification, and if lacking proper clearance will demand them to leave before opening fire. Sometimes, however, they do not ask nicely and just unleash their massive payload on trespassers.

Ultra-Sentinels defend areas they are stationed in like the Great War never happened, carrying out its duties gallantly. Only few are ever seen roaming out in the wasteland, and even then they've been reprogrammed by a very skilled - and equally lucky - scavenger to give themselves a great guard.

Weedling

"Though they sound and look kind of cute, like little ewes made of brown and green leaves, it would do everypony good to remember that these creatures are carnivorous and even if they can barely reach to gnaw on your ankle, they can devour a pony in seconds if they rush at you as a herd and knock you down. Alone, they're pretty much the Radroach of the vegetative world."

- Doc Holly

Type: Mutated Plant

EXP: 50

STR 3, PER 4, END 7, CHA 7, INT 2, AGI 8, LCK 5

Sneak 40, Unarmed 60

HP 6, DT 1, AP 14, Size -2, Karma 0

Immunities none

Resistances Poison 60%, Radiation 40%

Weaknesses Fire (2x DMG)

Additional Combat Details:

Bite (4 AP): Weedlings have sharp teeth they use to rip off the flesh of their prey. The attack deals 1+(3) damage, and has a chance to cause Bleeding -status effect.

Rush (8 AP): Weedlings tend to rush at a single target, attempting to knock the target down to be attacked. They Charge at the target and immediately attempt to Trip the target prone, ignoring the normal penalty for the Trip action. However, all attacks against the rushing weedling gain +10 bonus to hit until its next turn.

Trample (5 AP): Weedlings can trample their downed targets by running over them as a herd. This attack deals 1+(2) damage.

Camouflage: Weedlings stands out as walking bushes. However, they hide well among vegetation, doubling their effective Sneak.

Swarm: Weedlings appear in large groups, engulfing a Small Splash template. Due to their large numbers, Weedlings gain a +5 to Unarmed when making Attack of Opportunity attacks.

Creature drops:

- Berries (1d6, Survival doubles u.)
- Construct Orb (1 u. Thaumaturgy-20 to obtain)
- Green Herbs (1d6 u. Survival doubles u.)

- Red Herbs (1d4 u, Survival doubles u.)

Description:

Weedlings are lamb-like creatures that are small in stature, barely bigger than a general lap dog. Unlike lap dogs, they're armed with a nasty temper and a herd mentality to take down their prey.

Likely a magical construct similar to the timberwolves, weedlings are wooden lambs with thick bush of leaves for their wool, with an occasional cluster of red berries here and there. Male weedlings tend to have more berries than the females. Much like timberwolves, the weedling's eyes shine in a green color.

Though weedlings are harmless on their own, the herds they gather can and often do prove fatal for a pony, as they rush to knock their targets prone in order to devour them. This is why the weedlings always appear as a swarm, travelling with a large herd of individuals, both for their own protection and to hunt. Weedlings are obligate carnivores despite being a plant.

Due to being a plant, these creatures do stop what they're doing on a sunny day, in order to take in the very few and far between rays of sunshine. This concludes that the weedling can and do photosynthesize, but due to the rarity of it, have developed other means to gather nutrients.

When not actively hunting, the weedlings spend most of their time resting, blending into their forest-like surroundings by curling up, making them resemble nothing more than a regular bush. This is both to hide themselves from predators such as the Moss Shambler, and to ambush any creature foolish enough to wander too close. Much like most other plants, weedlings are vulnerable to fire, giving off a bright green sparks when set on fire.

Windigo

"So, surely you've heard the story of the founding of Equestria? Windigos freezing everything solid blah blah and so on. Though, these winter spirits are real, I've seen a few up north. Though our magic lasers do little more than spook them. Honestly, if you want to get them far away from you, either get friendly towards one another or ask around for a Zebra shaman. I think the shaman's a safer bet."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 400

STR 5, PER 5, END 7, CHA 2, INT 6, AGI 7, LCK 8

Sneak 80, **Unarmed** 70

HP 14, DT 2, AP 13, Size 0, Karma -25

Immunities Poison, Radiation

Resistances *none*

Weaknesses *none*

Additional Combat Details:

Freezing Touch (6 AP): Direct contact with Windigo causes the target to get Freezing - Status Effect. This attack also deals 4+(1) Cold damage.

Chilling Call (1/min, 8 AP): Windigos can cause a shriek that will send shivers down the spine of even the most battle-hardened wastelanders. Anyone within Large Splash template from the Windigo who fails a CHA check will gain Medium Distraction for 3 turns.

Nefarious Spirit: Windigos are spirits that manifest themselves in equine form. Due to this, conventional, non-magical weapons have a 50% chance of not dealing damage to Windigos. Magical weaponry like MEWs, Enchanted weapons and Spirits will deal their damage if hit like normal.

Howling: As spirit of icy winds, Windigos soar through the skies without wings. Their movement is 6 meters (3 Hexes) for 1 AP.

Blizzard: Windigos, as a winter spirit, generate a bitterly cold blizzard wherever they go. Even the sunniest of days will be clouded with dark skies and never-ending snow. This blizzard can cause a Blinded - status effect, with an END roll to resist. If successfully resisted, the Blizzard has no effect for the duration of the battle.

Creature drops:

Windigo Heart-gem (1 u. Gem worth 1000 caps)

Description:

Windigos are malicious spirits, known to bring with them cold and snow. They tend to seek out ponies that share hatred and fights between each other, as it is their primary source of nutrition - and the more hatred they consume, the colder the surroundings of where Windigos roam turn.

Windigos do not directly engage their prey - they stay close enough to feed upon the hatred, but far enough to not make their presence known. It is only when cornered or spotted will they fight with all they got, and preferably with minimal time taken as to not disturb their "hunting grounds".

Spotting a Windigo's presence may require some previous knowledge of the area. Sudden or unusual drop in temperature or slight snowfall in areas where there usually isn't may indicate towards the nefarious spirit's existence, especially if there's loud arguments or heavy fights in the area.

Wood-Rot Wasp

"This large mutated wasp goes after ponies due to being attracted to the scent of dead plant matter, such as weapon stocks, grates and caravans. With their drill-like ovipositor, they implant wooden structures with their eggs, and they also use it to make short work of any pony guarding said wooden structure, after which they feast upon the corpse. These creatures have been known to pierce even metal armor. Truly, a magnificent insect!"

- Acacia Honey, Entomologist

Type: Mutated Insect

EXP: 150

STR 5, PER 8, END 3, CHA 2, INT 1, AGI 8, LCK 4

Sneak 40, Unarmed 40

HP 10, DT 0, AP 14, Size -1, Karma 0

Immunities none

Resistances Poison 40%, Radiation 50%

Weaknesses none

Additional Combat Details:

Stinger (4 AP): The Wood-Rot Wasp doesn't have a stinger per say, but its ovipositor has "teeth" that make it function like a drill, which it can use to defend itself. The attack deals $3+(2)$ damage, and ignores 2 DT.

Flying: Wood-Rot Wasps did not retain their speed, only flying at a pace of 2 meters (1 Hex) for 1 AP.

Insect Brain: Crippling the Wood Rot Wasp's antennae causes it to gain Mind Controlled and Enraged -status effects and make them attack the nearest creature, be it friend or foe.

Quick Flier: Wood-Rot Wasps are observative creatures, and due to this they get a +2 to their Initiative rolls.

Creature drops:

- Spore Carrier Sap (1d4, Survival doubles u.)
- Pollen (1d8 u.)
- Stinger (1 u.)

Description:

Wood-Rot Wasps are -for an insect- a large parasitoid wasp species mutated by balefire. Their most notable feature is their long stinger-like ovipositor, that they use to both fend for themselves or to lay their eggs in rotting wood, hence their name.

Though they are not very aggressive, often leaving wandering ponies alone unless they feel threatened, they will attack any creature that stands between any sufficient rotting wood, be it structures, wagons or dead trees when they attempt to lay their eggs. Wood-rot wasps seem to locate the wood by scent. They can also use plant-like mutants, such as the Moss Shambler or Spore Carrier for their egg-laying.

Due to the fact that females are the only ones with an ovipositor, only the females are harmful to ponies, while male wood-rot wasps are both smaller and feed entirely on nectar and other insects, such as Twittermite. The female wood-rot wasps lay 7-10 eggs inside the wood, which eventually, in a span of several months, spring forth fully developed, as their life-cycle is very fast. The adult wood-rot wasps live for a few weeks at maximum.

Yao Guai

"Yao Guai is essentially a mutated bear that has lost its fur and gained vicious temper in return. They're aggressive, with mass and power to back it up. And unlike the bears of old, these ones do not run away when they smell you, they run at you, ready to really buck your day. As far as I have heard, honey might still be delicious to them. Maybe. I would at least advice one not to carry a jar with them when taking a leisurely stroll through the woods. Or a picnic basket, for that matter."

- Verdant Brink, Hunter

Type: Mutated Animal

EXP: 500

STR 8, PER 6, END 7, CHA 4, INT 3, AGI 4, LCK 4

Sneak 60, Unarmed 70

HP 18, DT 3, AP 12, Size 1, Karma 0

Immunities none

Resistances Poison 20%, Radiation 50%

Weaknesses none

Additional Combat Details:

Bite (8 AP): Yao Guai sometimes use their powerful jaws to cripple and pacify their foes, dealing 4+(4) damage and have a base crippling chance of 20% with this attack.

Claws (6 AP): The Yao Guai's claws can rip apart the weakest armors in seconds. The attack deals 3+(3) damage, and ignores 1 DT.

Long reach: Yao Guai have considerably long forelegs, giving their Melee and Unarmed attacks additional 2 meters (1 Hex) reach.

Tight Grasp: Yao Guai's strong forelegs make them excellent at grappling their foes, thus they gain +10 to all opposed rolls made to Grapple.

Woodlands Stride: Yao Guai are capable of surprisingly agile movements for their size and weight, thus ignoring the +1 AP cost of Difficult Terrain.

Creature drops:

- Yao Guai Meat (2d4 pieces, Survival doubles u.)
- Hide (1d4 pieces, Survival doubles u.)
- Vial of Yao Guai blood (3d4 u, Survival doubles u.)
- Yao Guai Crystals (1d4, Survival doubles u. Gem worth 200 caps)

Ming Yao Guai

"It is safe to say the rookies do fear the bear despite their mighty armor. And while many of them may live to tell against such encounters, without a single scratch, such fear is negligible. However.. there is a true nightmare as well. The elder Yao Guai as some call them, are the pinnacle beasts of terror. Further gone through mutation by Radiation, their size is much larger, their claws greater, and you bet their stench does bypass the filter."

- Star Paladin Glitter Dust

Type: Abomination

EXP: 650

STR 10, **PER** 6, **END** 8, **CHA** 3, **INT** 2, **AGI** 4, **LCK** 4

Sneak 60, **Unarmed** 75

HP 18, **DT** 4, **AP** 12, **Size** 2, **Karma** 0

Immunities Radiation

Resistances Poison 25%

Weaknesses none

Additional Combat Details:

Bite (8 AP): Yao Guai sometimes use their powerful jaws to cripple and pacify their foes, dealing 5+(4) damage and have a base crippling chance of 20% with this attack.

Claws (6 AP): The Yao Guai's claws can rip apart the weakest armors in seconds. The attack deals 3+(4) damage, and ignores 2 DT.

Irradiated attacks: Ghoulified Yao Guai's attacks carry Radiation. Every attack has a 1x60% chance of giving a Rad token.

Long reach: Ghoulified Yao Guai have considerably long forelegs, giving their Melee and Unarmed attacks additional 4 meters (2 Hex) reach.

Tight Grasp: Ghoulified Yao Guai's strong forelegs make them excellent at grappling their foes, thus they gain +10 to all opposed rolls made to Grapple.

Noxious Odors (6 AP): The Ming Yao Guai emits a foul stench, causing anyone within Large Splash template from it to suffer a poisoning with 2x50% chance. When poisoned, the target suffers a -2 to a random SPECIAL and no longer recovers Strain. Antivenom cures this effect.

Woodlands Stride: Ming Yao Guai are capable of surprisingly agile movements for their size and weight, thus ignoring the +1 AP cost of Difficult Terrain.

Creature drops:

- Yao Guai Meat (Abomination Flesh Piece, 1d4 pieces, Survival doubles u.)
- Hide (1d4 pieces, Survival doubles u.)
- Vial of Yao Guai blood (3d4 u.)
- Yao Guai Crystals (1d4, Survival doubles u. Gem worth 200 caps)

Description:

The Yao Guai are bears that have either lost most of their fur, or have crystalline growth and studs across their bodies. In comparison to a normal bear, they also stand taller and mightier.

The origins of the term “Yao Guai” to name the horribly mutated bears with short temper and a lot of aggression have been lost to the time, a few arguing it may have its origins in Zebra language. Whatever the case may be, it is clear the Yao Guai do not care what you call them, only that their domain is left alone. And most often said domain is “50 meter radius from where one is currently standing”.

The further mutation of Yao Guai, through massive Radiation exposure has reduced them in much more feral, solely on instinct driven state. However, such development has increased their size and strength considerably, while also making them impervious to Radiation, even radiating it themselves.

Otherwise in behaviour, the Yao Guai do not differ from unmutated bears. They are most often solitary creatures, only meeting others of their kind for breeding purposes, and the mother looks after the newly-born Yao Guai cubs until they’re large enough to defend themselves. If one does meet a Yao Guai cub on its own, the mother is close by - and viciously defends its offspring.

Zebra Tribal

“What is there to be said about Zebra, the distant and distinct kin of ours? Their strange customs and beliefs continue to confound me to this day, not to mention the way most of them speak, in rhyme no less! But I wager, if they’re not on the warpath, you could have a chat with them. And if they are... run.”

- Merchant Silver Bit

Type: Sentient

EXP: 200

STR 5, PER 5, END 4, CHA 7, INT 7, AGI 7, LCK 6

Barter 70, Diplomacy 40, Firearms 60, Melee 50, MEWs 60, Sneak 70, Thaumaturgy 60, Unarmed 60

HP 14, DT Varies, AP 13, Size 0 Karma Varies

Potency 15, Strain 25

Immunities none

Resistances Poison 20%, Radiation 5%

Weaknesses none

Additional Combat Details:

Wasteland Weaponry: Zebras can carry just about any weapon and armor imaginable. Especially popular are Silaha-brand MEWs, which are of zebra origin.

Shamanism: Some zebras can use Spirits in battle, both Pact and Possession Spirits are popular.

Alchemical Interests: Zebras know how to brew potions and poisons and do not shy from using them.

Abomination Hunter: Due to their high-caliber weaponry and armor, most zebras are well-equipped to fight even the most horrid things the Wasteland has to offer. They gain a +10 to Combat skills when targeting Abominations, including sane Ghouls.

Zebra Language: Zebra speak their own native language, often allowing them to communicate on the battlefield without their enemy catching on. Characters that understand Zebra language can interpret them, however.

Organized: Zebra tribals have hierarchy of leadership. They strike as units and groups of various sizes, usually under at least one spokesperson. Eliminating such spokesperson often leaves rest of the group at disarray and demoralized, giving them a -5 to all skill actions.

Creature drops:

- Main Weapon (1 u.)
- Additional Weapon (1-2 u.)
- Armor or Clothing (1 u.)
- Healing Item or Alchemical brew (1, LCK doubles)
- Alchemical recipe (LCK-2 to obtain)

Description:

Zebras, the striped equine cousins of ponies, weren't exterminated by the balefire exchange between their now-fallen nation and Equestria during the Great War, just like Equestrian ponies weren't. Zebras have endured and improvised the fall of civilization while not letting their past rituals and cultural aspects get lost in time.

Zebras, like ponies, are social individuals - they have their own goals and desires, though survival brings them closer to other, like-minded fellows. Thus zebras aren't inherently evil or good, it depends on the particular individual.

Some zebras may have wandered to the Equestrian Wasteland from their own lands, while some are the descendants of zebras that lived in pre-War Equestria. While a few reside with ponies in same settlements, the past deeds and mistrust runs deep in some ponies, and zebras are more often than not shunned by pony communities. It is thus not unheard of zebras forming their own communities in the wilderness or ruins, away from those who may seek harm to them.
